# Ngenea Hub

Ngenea Hub2 provides a management and control interface for data and systems across a global pixstor estate.

Using Hub2 users can create Spaces for datasets across multiple pixstors, enable data synchronisation, perform data manipulation through workflows and control system settings for all pixstors from one administrative interface.

# Move data based on business needs

With ngenea, you can quickly and securely transport data to and from globally distributed cloud, object storage, traditional NAS files and tape resources – automatically moving data into the 'right cost' resource according to value and usage as your work teams and business needs demand.

# Pick your area of interest:

# **User Guide**

#### Overview

Ngenea Hub2 provides a management and control interface for data and systems across a global pixstor estate.

Using Hub2 users can create Spaces for datasets across multiple pixstors, enable data synchronisation, perform data manipulation through workflows and control system settings for all pixstors from one administrative interface.

# **Accessing Hub**

To login to Hub enter the URL of the hub into the browser address bar. E.G. https://myhub

On successful connection to the Hub a login page is presented.

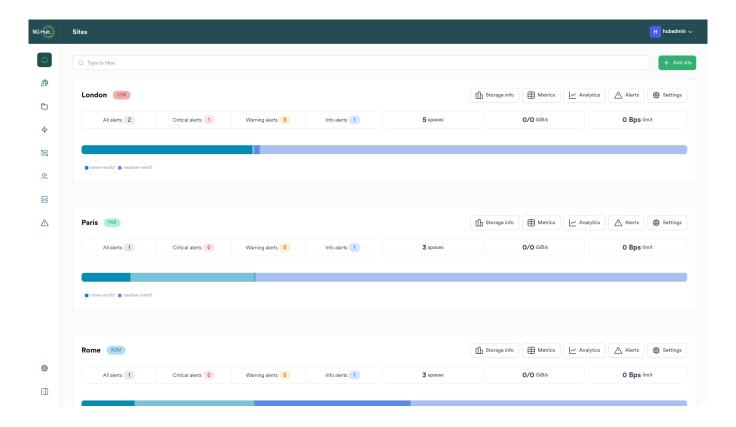

Enter your Username and Password to authenticate with Hub and login.

# Logging Out Of Hub

After successful login, from the User Profile control in the top right of the screen select the Log out option.

# The Main Screen

The main Hub screen is comprised of several areas.

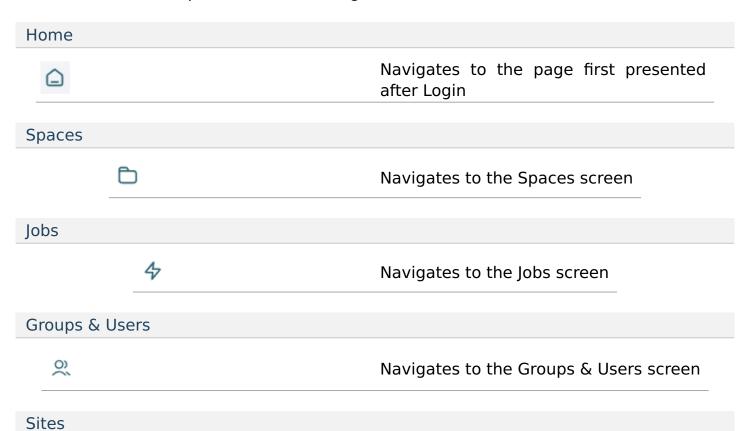

#### Menu Bar

The menu bar is positioned on the far left of the Hub screen.

#### Menu Buttons

The menu buttons perform the following functions when clicked:

Navigates to the Sites screen

#### **Alerts**

Navigates to the Global Alerts screen

# **Global Settings**

Navigates to the Global Settings screen

# Enlarge/Reduce

Clicking the toggle widens the menu bar to show:

Menu button descriptions

Hub version

Clicking the toggle button again shrinks the menu bar.

# Page Location

The page location is positioned to the top of the Hub screen.

# Main page content

The main page content is positioned to the center of the Hub screen.

The User Profile control is positioned to the top right of the Hub screen.

The User Profile control displays the name of the user logged into Hub using the current browser session.

Use this control to Log out of Hub and update your User settings.

#### User Profile

Selecting the Profile option from the drop down menu presents the User settings dialog of the logged in user.

Clicking the Save button at the bottom of the User settings dialog saves any changes made.

# **User settings** hubadmin **Basic information** Password Type the password Leave empty to keep the password unchanged. First name Hub Last name Admin Email hubadmin@mycompany.com × Groups 1 group selected Administrators **NAS User Settings** Also create this user on all pixstors

#### **Password**

**API Keys** 

Enter a new Password to change your Password.

#### First name

Enter a new first name to change your First name.

#### Last name

Enter a new Last name to change your Last name.

# **Email**

Enter a new valid email address to change your email address.

# Groups

A list of groups your user account belongs to is displayed.

# **API** Keys

Provides the capability to add and remove API keys.

An API key is typically used for by 3rd party software to connect to Hub to perform automation.

# Adding an API Key

To add a new API key, click the Add API key button.

Enter a name for the API Key.

#### Name

**Tip:** It is not possible to change the name of an API key once the key has been created.

Add additional API keys as required.

Upon pressing Save the API Key dialog is raised displaying the API Keys created.

#### API keys created

These are the created API keys. You won't be able to display them again. Please copy them before you close this window.

```
☐ "root": [ 1 item

☐ 0: { 2 items

☐ "name": "MyAPIKey"

☐ "key": "9tbdetnY.jGbTyHBg8f5SHKQHQxwU7VFSLwBTWn7H"

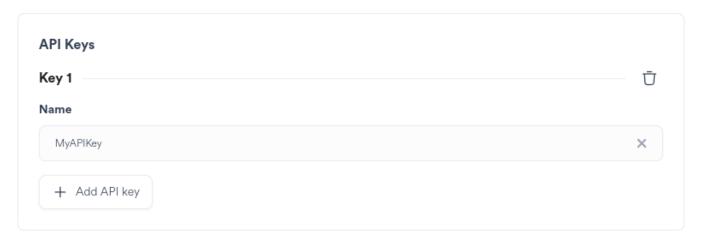

}
]
```

Close

Ensure to save the generated keys safely as once the API Key dialog is closed the keys cannot be viewed again.

# Removing an API key

### Created API Keys are listed

Ū

To remove an API key, click the dustbin icon next to the API Key.

**Tip:** Deleted API Keys are non-recoverable. If an API Key has been inadvertently removed, do not press the Save button, instead click off the User settings dialog to the main area of the screen.

Clicking the Save button at the bottom of the User settings dialog saves any changes made.

#### Search

Hub provides the ability to Search for assets across all Hub managed Sites.

Where proxies are enabled for Search supported asset types, thumbnails and proxies are displayed.

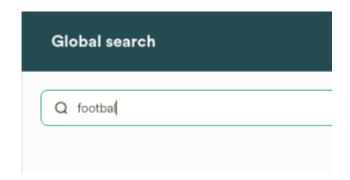

Asset locations, Spaces, metadata and Tags are searchable providing rich criteria to locate assets.

Located assets can be processed using the Jobs Panel to perform Workflow actions.

# Searching

Enter a term in the Search bar to start a Search. E.G.: football.

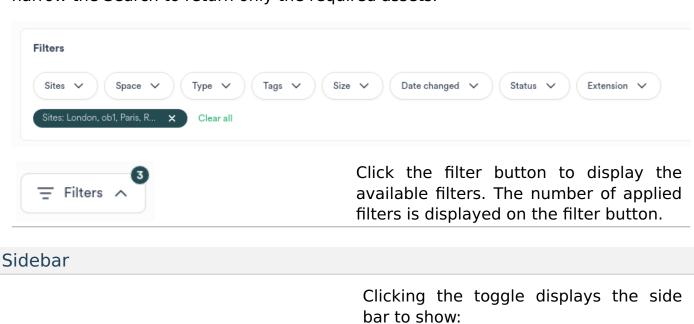

Terms are automatically wildcarded to enable wide Searching. E.G.: \*football\*.

#### **Filters**

門

Search provides several high level filters each of which apply additional criteria to narrow the Search to return only the required assets.

• Item Info

Metadata

Tags

Clicking the toggle button again hides the side bar.

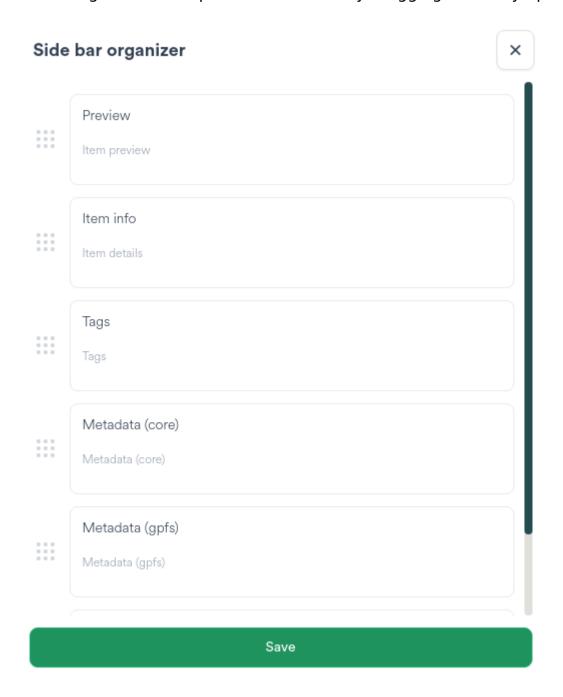

Item info	_
Name	football hd001.png
Path	/mmfs1/data/datasync/footbal
Size	3.2 MB
Tags	_
Empty (add tags)	)
Metadata (core	_
accesstime	24.01.2024, 10:25 GMT
blocksize	8388608
changetime	24.01.2024, 10:25 GMT
deviceid	250609814
directory	/mmfs1/data/datasync/footbal

# Reordering

Re-arrange items in top to bottom order by dragging vertically up or down.

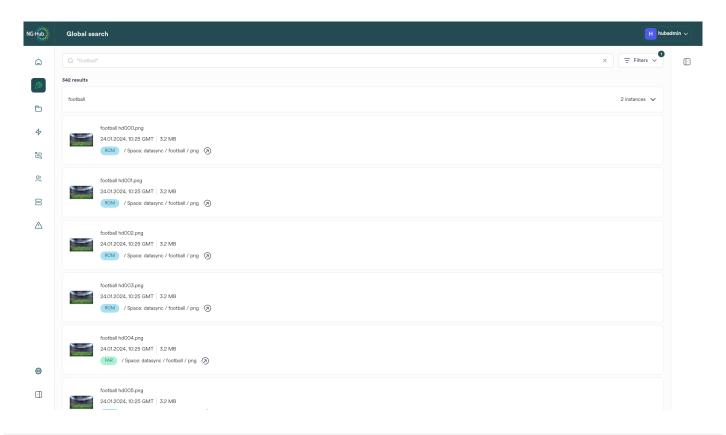

Click Save to store the sequence which is reflected in the Job side bar.

#### Results

Search matches assets to the Search input returning collated results to screen.

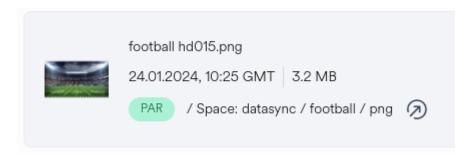

Searches are processed asynchronously, therefore some results may take longer to return to screen than others.

Where a Site is unavailable or takes too long to return results, information messages appear at the top of the screen allowing for deselection of the Site or Site(s).

# Result Card

Returned assets appear as a Result Card.

Where multiple instances of the same asset are present on more than one Site, the results are collated.

2 instances V	Open	the	instances	drop	down	to
Z IIIstances 🗸	displa	y all t	he assets fr	om all	Sites	

# The Result Card displays:

Item	Description
Thumbnail	The generated thumbnail or a default icon where no thumbnail exists
Name	The name of the asset
Date and Size	The date and time of last modification, the size of the file on the pixstor file system
Site chip	The site on which the asset is found
Space Location	The location of the asset in the Space

# Tags

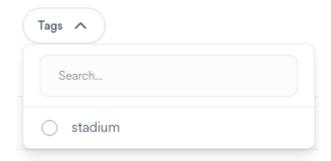

Search provides the ability to Tag assets.

Apply Search Tags to assets in order to collate assets into collections or curate as required.

**Tip:** Applied Tags are added to Site Search services asynchronously. Dependent on workload there may be a small delay between the addition of the Tag in the UI and the ability to Search for the asset by the Tag.

### Searching By Tag

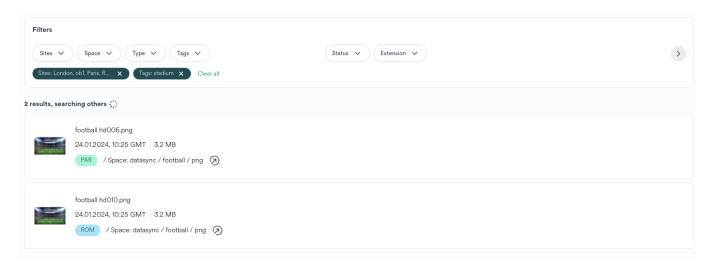

- To Search for an asset by Tag, open the Search filter bar and select the Tag from the drop down menu
- Entering text into the Tag filter matches available Tags to provide a shorter selection list

Applied Tags are denoted with a chip below the filter bar. Click the x to remove the Tag from the filter.

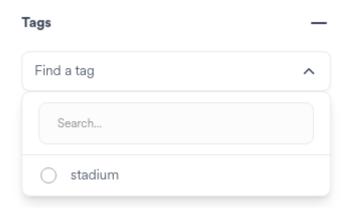

Example of Searching for assets where the Tag stadium is applied:

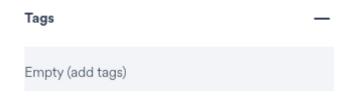

# Tagging An Asset

To add a Tag to an asset, open the side bar and locate the Tags section in the bar.

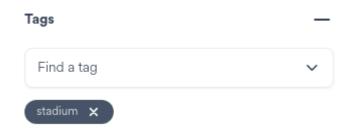

Where no Tags are set on the asset, a prompt to add Tags is shown. Click the entry box to start.

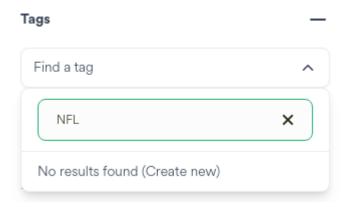

To apply an existing Tag to the asset, select the Tag.

Applied Tags are denoted with a chip below the filter bar. Click the  $\boldsymbol{x}$  to remove the Tag from the filter.

If no Tags exist, enter a Tag (case sensitive) in the Tag entry box and press Enter to create and apply the new Tag.

#### **Actions**

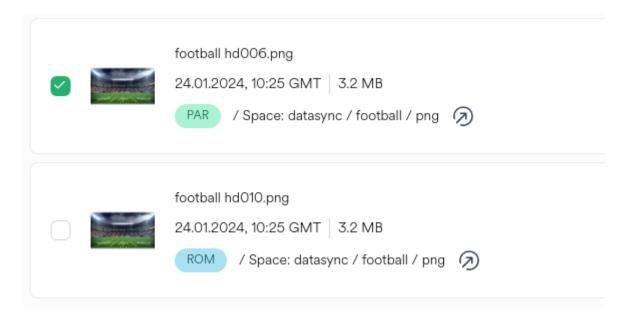

Post Search, assets can be actioned by Workflows using the Job Panel.

To enable asset selection first select an individual Space from the Search filters.

Selecting an individual Space enables asset selection.

 Click the checkbox to the left of an asset to add the asset to the Job Panel selection list

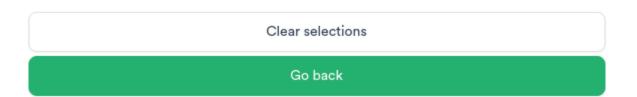

Assets in the Job Panel are processed per Space, per Site. Selecting assets from additional Sites raises a confirmation dialog.

• Choose whether to retain the assets from the current Site or to clear all the current selections in order to add new selections from other Site(s)

### Different sources

You have files selected from a different source site/space in the selection list. You can either clear all selections, or go back to source site/space to continue adding from the same source.

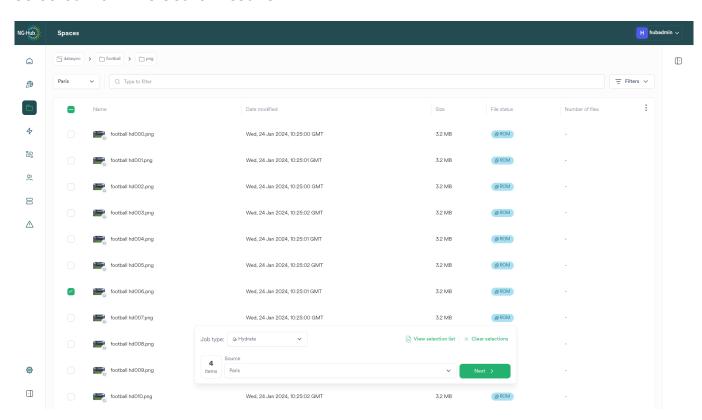

When the Job Panel selection contains selected items, navigating to the Space on the selected Site retains the selections in the Job Panel selection list.

Click the filebrowser navigation button on the Space card to navigate to the selected Space, filtered by Site. Any assets already selected remain in the Job Panel selection list.

Example of asset selections after navigating to the Space on the Site with assets selected from the Search results:

# **Spaces**

A Space is an area of storage present on or across one or more pixstor which comprises the following capabilities:

- name
- location
- size
- data protection
- performance
- file share

# Viewing Spaces

To view available spaces, click the Spaces menu button to display a dialog to configure the selected site.

Navigates to the Spaces screen

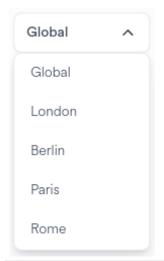

The ability to view spaces is restricted by group membership.

- Administrators can view and administrate all Spaces across all Sites
- Users can view and use all Spaces across all Sites
- Restricted users can view and use a defined subset of Spaces on associated Sites

Hub provides two views of Spaces - Global and Local.

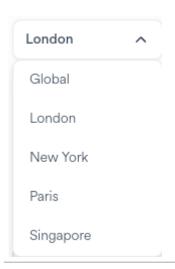

- Global displays all Spaces on all Sites
- Local displays the Spaces on a specific site

The default view of Spaces is Global.

To switch to a site-centric view, select the specific site from the Spaces dropdown menu.

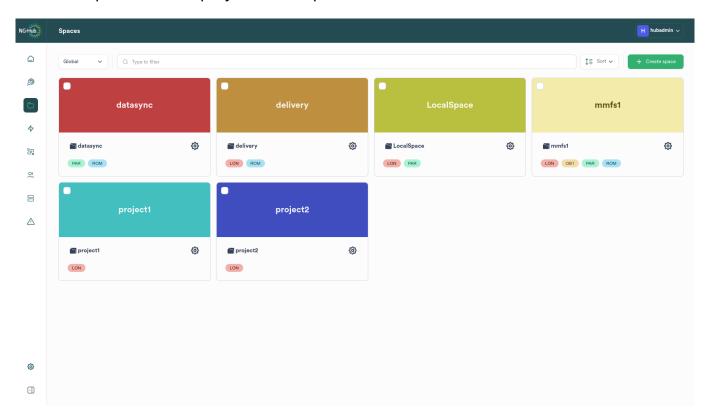

To switch to Global view, select Global from the Spaces drop-down menu.

#### **Global View**

Global view displays all Spaces on all Sites.

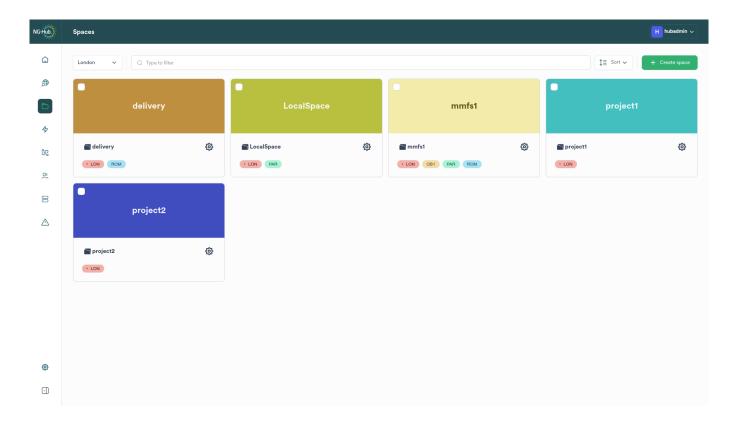

The example below displays all the Spaces across all Sites.

# Local View

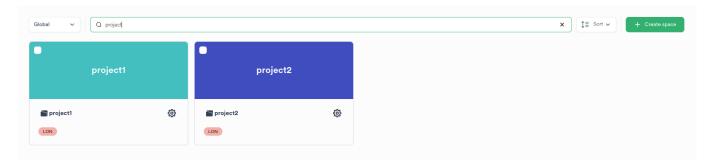

Local view displays the Spaces on a specific Site.

The example below displays less Spaces than Global as the site is participating in fewer Spaces.

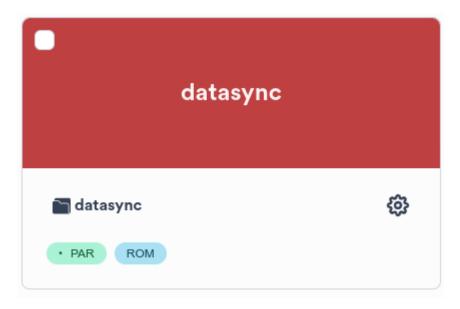

# Filtering the Space View

To display Spaces matching keywords, enter the keywords in the filter bar.

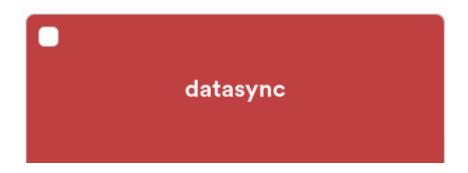

# The Space Card

A Space is displayed as a card in the Space view.

# A Space Card comprises:

# Space Card Header

Denotes the name of the Space.

Click the Header to view the Space File Browser.

#### Space Name

Denotes the name of the Space.

Click the Space Name to view the Space File Browser.

### **Space Site Chips**

Site Chips denote the sites on which a Space is present.

Click a Site Chip to change the view to the Local View of the Space File Browser for a specific Site.

In Global view all sites are listed in alphabetical order.

In Local View, the selected site is identified with a dot.

All other sites are listed in alphabetical order after the local site.

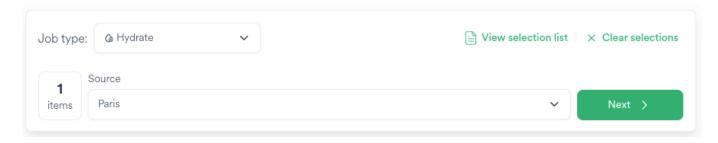

### Space Selector Checkbox

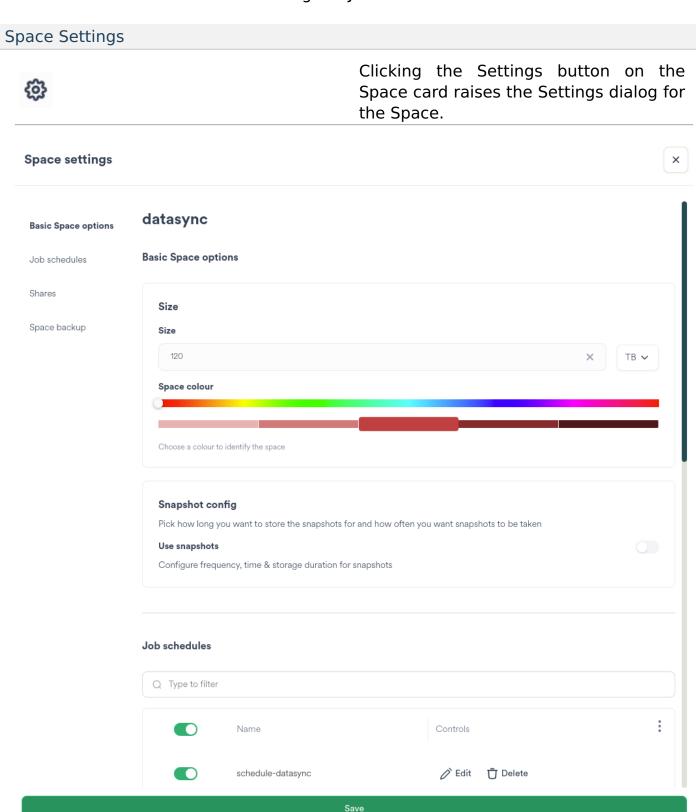

Selecting the Space Selector Checkbox raises the Job Creator Panel to perform data operations on the entire Space.

**Tip:** To perform more granular operations on data inside the Space, refer to Selecting files and folders

The Job Creator Panel allows data operations on the Space as a whole.

For further information refer to Using the Job Creator Panel.

**Important:** Adding or Configuring a Space can only be performed by a Hub Administrator or User with Space Administration rights granted through group management.

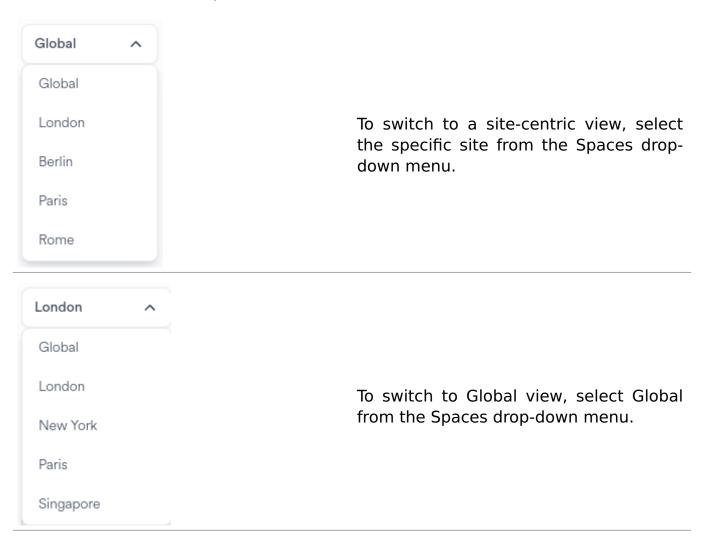

# **Browsing Spaces**

The Spaces File Browser displays the file and folder contents of a Space across multiple or specific sites including additional contextual information such as file counts, size, metadata and status.

The Space File Browser provides two views of Spaces file and folder content - Global and Local.

- Global displays the file and folder content for a Space across all Spaces on all associated Sites
- Local displays the file and folder content for a Space on a specific Site

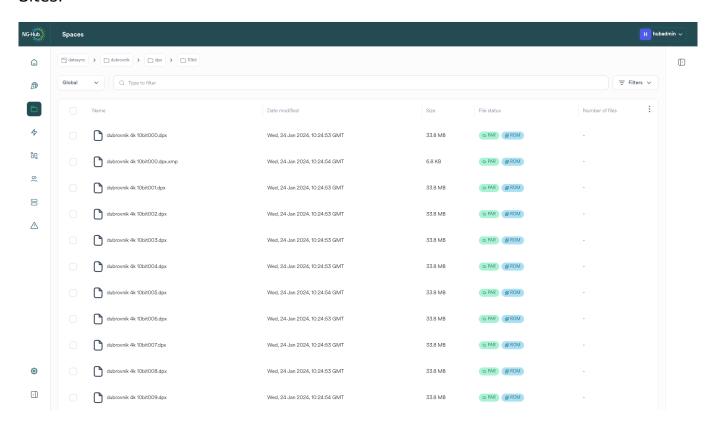

The default view of the Spaces File Browser is Global.

#### Spaces File Browser Global View

Global view displays the file and folder content for a Space across all Spaces on all associated Sites

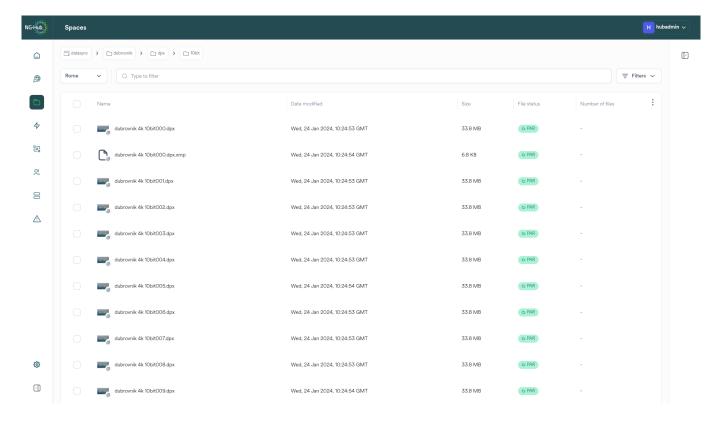

The example below displays the file and folder content for the Spaces across all Sites.

# Spaces File Browser Local View

Local view displays the file and folder content for a Space on a specific Site

The example below displays the file and folder content for a Spaces across all Sites with a site-centric view.

# The Space File Browser Screen

The Spaces File Browser screen is comprised of several areas.

# Filtering the Space File Browser

To display files or folders matching keywords, enter the keywords in the filter bar.

# Space File Browser Icon Statuses

In Local View the Spaces File Browser displays additional information to designate the status of the file on the Site's pixstor file system.

	Spaces File Browser Local View displays the default file icon if the file or folder is unmanaged. An unmanaged file has not yet been processed by Ngenea operations.
	Spaces File Browser Local View displays the cloud icon if the file or folder is Pre- Staged. A pre-staged file is present on the Site's pixstor file system and has an identical copy in the ngenea target (E.G. AWS cloud bucket).
O LON	Spaces File Browser Local View displays the cloud icon if the file or folder is dehydrated. A dehydrated file has only metadata present on the Site's pixstor file system and has a fully hydrated identical copy in the ngenea target (E.G. AWS cloud bucket).

### Space File Browser File Statuses

Site Chips denote the sites on which a Space file or folder is present and their status.

In Global view all sites are listed in alphabetical order.

In Local View, the selected site is identified with a dot.

All other sites are listed in alphabetical order after the local site.

<b>D</b> LON	Spaces File Browser Local View displays the default file icon if the file or folder is unmanaged. An unmanaged file has not yet been processed by Ngenea operations.
<b>a</b> LON	Spaces File Browser Local View displays the cloud icon if the file or folder is prestaged. A pre-staged file is present on the Site's pixstor file system and has an identical copy in the ngenea target (E.G. AWS cloud bucket).
O LON	Spaces File Browser Local View displays the cloud icon if the file or folder is dehydrated. A dehydrated file has only metadata present on the Site's pixstor file system and has a fully hydrated identical copy in the ngenea target (E.G. AWS cloud bucket).
⊖ LON	Spaces File Browser Local View the file or folder displays a greyed out site with a circled dash where the file is not present on the associated site.

# Space File Browser File Attributes

The Space File Browser displays information regarding the files and folders within the Space, globally on all Sites or local to a Site.

Option	Description
Name	The file or directory name
Date Modified	The date and time of last modification
Size	The size of the file on the pixstor file system
File Status	The file status per-site
Number of Files	If the item is a directory, displays the total file count within the directory tree thereunder

# Viewing File or Folder Metadata

### Metadata Panel

Click a file or directory name to view the associated metadata:

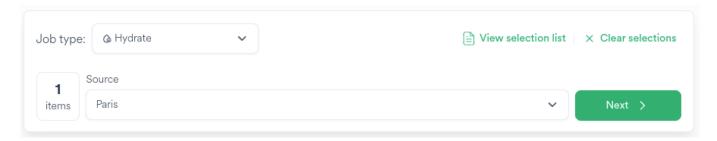

Item info	_
Name	dubrovník 4k 10bit000.dpx
Туре	file
Path	/mmfs1/data/datasync/dubrov
Site names	Rome
Size	33.8 MB
Date changed	24.01.2024, 10:24 GMT
Date accessed	24.01.2024, 10:24 GMT
Date modified	24.01.2024, 10:24 GMT
Hydration statu	us —
Rome	Premigrated 💋
Paris	Migrated 🔿

The metadata panel provides extended metadata, including a summary of the file status on each site participating within a Space.

Where an asset has been ingested via Search thumbnails are displayed for supported file types.

# Using the Job Creator Panel

Explain panel areas, buttons and operations

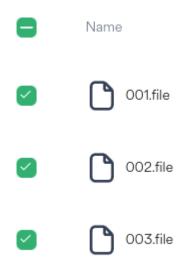

# Selecting files and directories

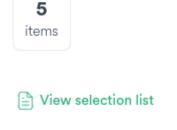

Selecting an individual file or directory populates the selection list with the item.A Selecting a directory populates all items within the chosen directory tree.

Selections of the entire Space or a directory are each counted as 1 item.

Select the 'select all' checkbox next to the Name field in order to select the entire Space.

As selections are added or removed, the selected item count is updated:

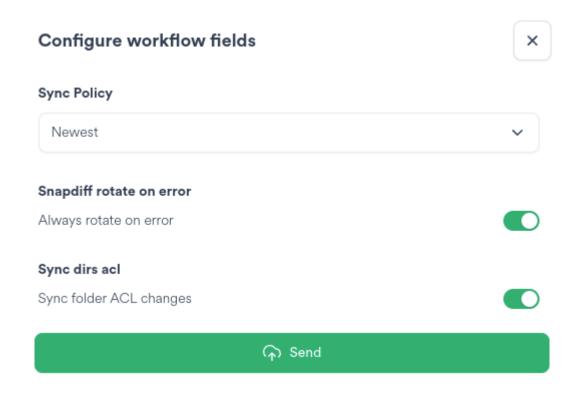

Click the View Selection List button to show the files and directories selected to be processed by the chosen workflow × Clear selections

Click the Clear selections to remove all files and directories currently selected from the selection list

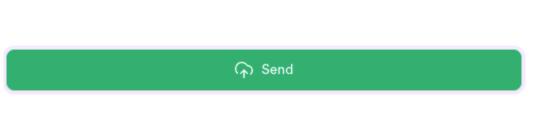

Click the Next button to enact the Job

Jobs with Workflows which require additional user decisions prior to enacting the Job raise the Configure workflow fields dialog:

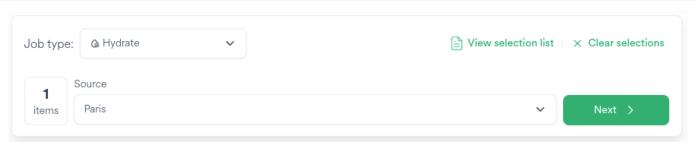

After entering the field information [if required], select the button at the bottom of the dialog to submit the Job.

Click the button at the bottom of the dialog to submit the Job. The button label is changed dependent on the workflow chosen.

# Job Types (Workflows)

#### **Default Workflows**

### Dehydrate

The Dehydrate workflow transfers the file metadata and data to an Ngenea target (E.G. an AWS cloud bucket). After dehydration the file appears to be normally present alike any other file on the pixstor file system, but consumes no space. Reading the file automatically hydrates the file with data content allowing the user to read the file as normal.

### Pre-Stage

The Pre-Stage workflow transfers the file metadata and data to an Ngenea target (E.G. an AWS cloud bucket). After migration the file on Ngenea target is an identical instance of the file on the pixstor file system. The file on the pixstor file system is not dehydrated. Reading the file allows the user to read the file as normal. Pre-Staging can reduce the total time to Dehydrate the same data in future.

### Hydrate

The Hydrate workflow retrieves the file data from an Ngenea target (E.G. an AWS cloud bucket). After successful transfer the metadata and data content of the file is present on the destination site. Reading the file allows the user to read the file as normal.

#### Sync Space to Site

The Sync Space to Site uses file system snapshots to disover changes between the last file system snapshot and when the workflow was run. Changes are applied by sending newly created or recently modified files and directories, including deleting or moving files or directories in place on the target site as necessary to match the source site.

#### Send to Site (hydrated)

The Send to Site (hydrated) workflow transfers data from a source site to a destination site. After successful transfer the metadata and data content of the file is present on the destination site. Reading the file allows the user to read the file as normal.

### Send to Site (dehydrated)

The Send to Site (dehydrated) workflow transfers data from a source site to a destination site. After successful transfer the metadata of the file is present on the destination site. To a user the file appears to be normally present alike any other file on the pixstor file system. Reading the file automatically hydrates the file with data content allowing the user to read the file as normal.

#### Additional Custom Workflows

Hub can support additional Custom Workflows providing custom operations to data through multiple task steps. Custom workflows are configured and provisioned by a Hub Administrator using the Hub CLI. When provisioned Hub Custom Workflows will appear in the list of workflows available for users to use with their data.

# Adding a Space

Click the Create Space button to display a dialog to configure the selected site.

**Important:** This function can only be performed by a Hub Administrator

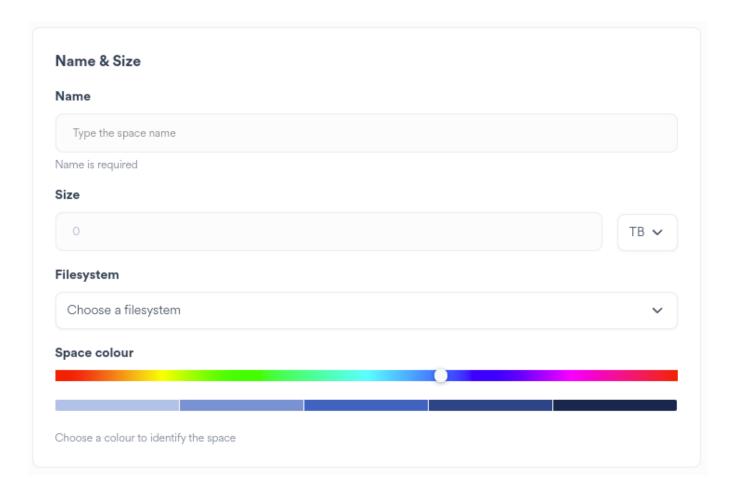

# Create a Space Wizard Navigating the Wizard Click the close button to exit the wizard. × Changes are not saved. Click the Next button to advance to the next page of the wizard. The Next Next > button is disabled until all required page elements are completed. Click the Go Back button to return to Go back the previous wizard page. Click the Finish & Create button to apply Finish & Create > the changes displayed on the wizard summary page.

### **Basic Space Options**

Spaces are created on pixstor file systems at /mmfs1/data/[Space] or at an alternative custom location.

Spaces can be restricted to a limited amount of data.

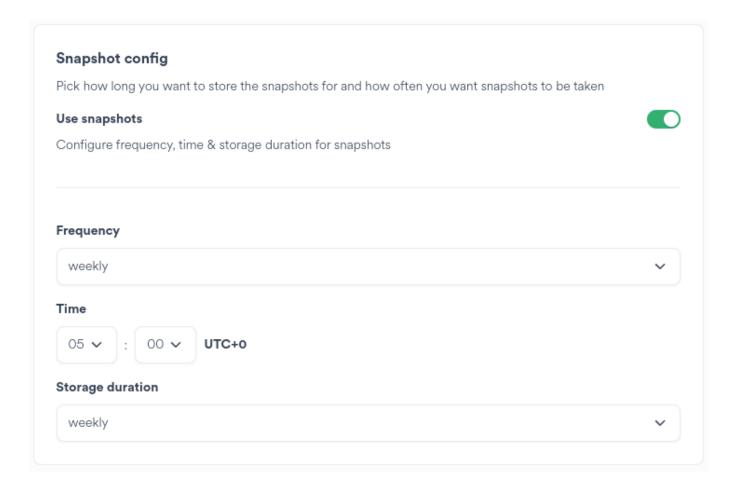

Spaces are defined to a specific file system.

- Enter a name of the Space. The name is case-sensitive.
- Choose the data limit for the Space or unrestricted (Size = 0)
- Select the file system the Space will reside on across all pixstors
- Select a colour for the Space Card

Snapshots create safety copies of data on the pixstor file system.

Snapshots are not backups and should not be used as protection against media failures

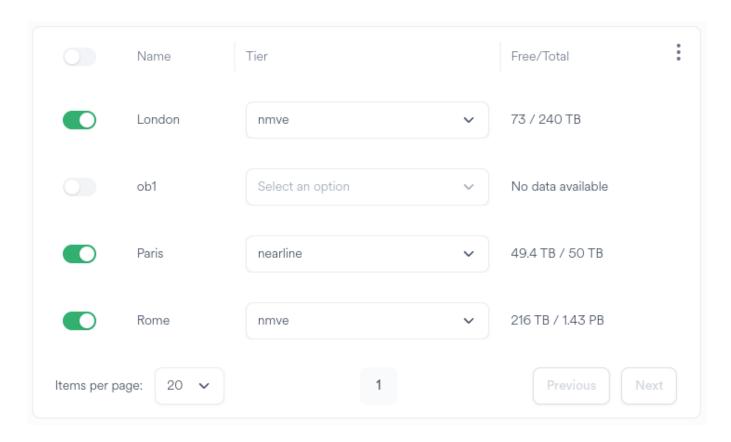

- Choose whether snapshots are required for the Space
- Choose the frequency of the snapshot
- If the frequency is daily or longer, select the time of day in UTC+0 on the Site to snapshot the Space
- Choose how long to retain the snapshots

Select the Sites to create this Space on

A Space can exist across multiple Sites.

By default data does not move across multiple Sites. Scheduled workflows must be set up to enable cross-site data movement.

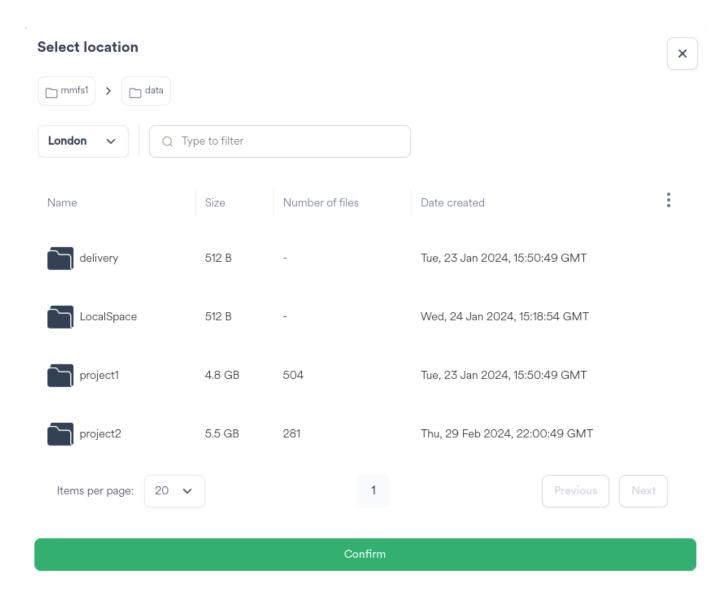

Hub provides the ability to synchronise a Space with two Sites - a bi-directional sync.

- Select the Sites on which to create the Space
- Select the pixstor file system tier on which to host the files for the Space. The
  tier is limited to those available for the file system selected in the prior wizard
  screen.

If two Sites are selected the Wizard will prompt to setup a bi-directional sync.

- Select a Site to browse. Parent directories not present on another Site will be added when a Space is created.
- Navigate to the directory under which to create the Space
- Click the Confirm button to return to the Space creation wizard

The chosen location is displayed and will be used for all Sites on which the Space is created.

Set up bi-directional sync

If two Sites are selected on the prior wizard page, Hub prompts to setup a bidirectional sync.

Only one bi-directional sync can run at a time.

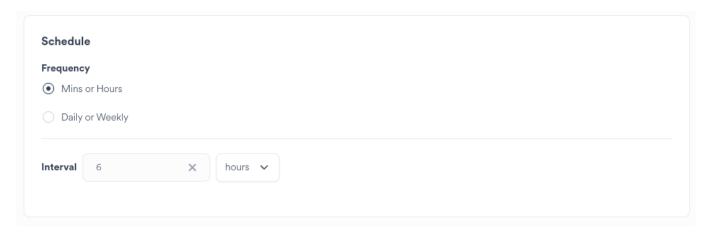

This page can be skipped if no synchronisation is required.

- Select the source Site to launch the first sync from
- Select the other Site as the destination site

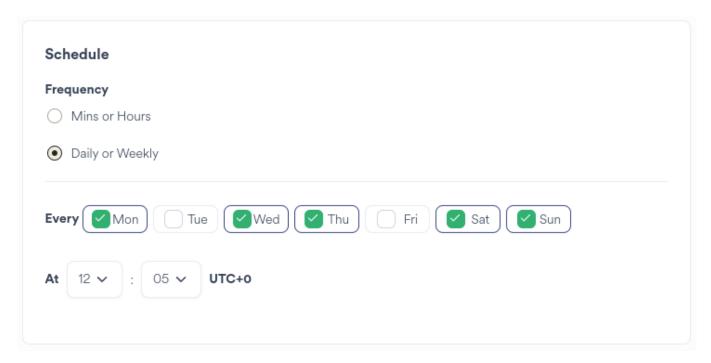

#### Schedule

Determine the required frequency of the synchronisation.

Choosing Mins or Hours will ensure that the schedule will run on the next interval set.

E.G: \* 1 hour: The synchronisation will run on the next hour (12.00, 13.00) \* 15 mins: The synchronisation will run on the next 15 minute interval past the hour (15, 30, 45, 00)

Choosing Daily or Weekly allows the synchronisation to be be scheduled once per chosen day at a specific time of day.

**Hint:** The schedule time is in UTC+0. You may need to account for any timezone offset of the site when scheduling.

#### Shares

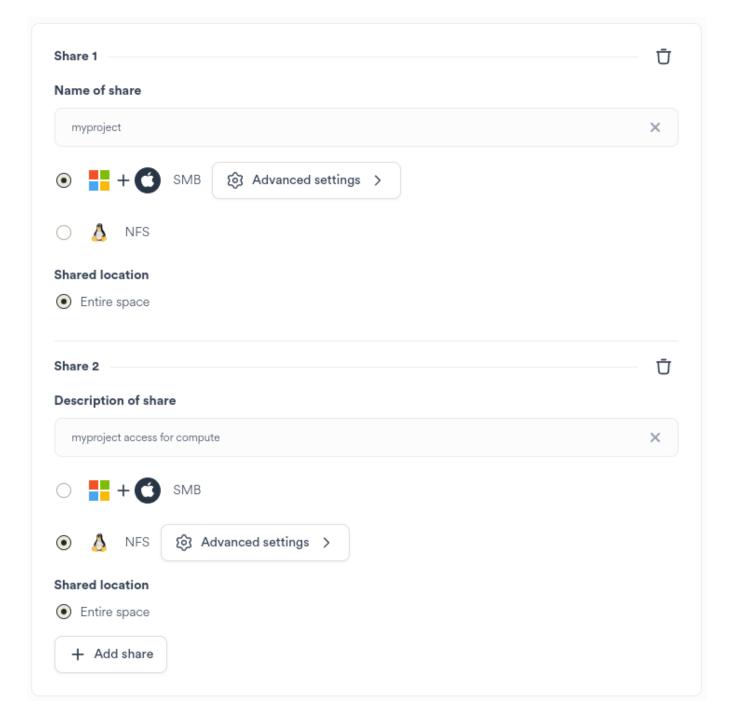

Prior to Space creation Shares can be assigned.

Shares are created across all Sites where the Space is provisioned.

As the Space is not yet created any Share created is assigned to the whole Space. To create Shares within the Space, edit the Space after creation and add the required Shares.

To create shares for directories within a Space can be created via the Edit Space button after successful Space creation. Shares are created identically across all Sites participating in a Space.

• Select either protocol type to create a Share

SMB protocol creates a Share with the name provided.

NFS protocol creates a Share at the Space location on the pixstor file system. Set a suitable description of the share.

• Optionally choose to modify the Share configuration in the Advanced settings.

# SMB Advanced

#### **Extended SMB options**

Modifying the extended SMB options controls the Share capabilities:

Read only
Enable multi-threaded reads
Enable multi-threaded writes
Locking for root share
HSM Support
Guest OK

Select the available extended SMB options as appropriate:

Option	Description
Read only	If enabled then users of the Share may not create or modify files in the Space.
Enable multi-threaded writes	Enable asynchronous reads and writes
Locking for root share	Enforce file locking
HSM support	Support ngenea operations to data within the Space
Guest OK	Access will be permitted as the default guest user

# **SMB Custom Options**

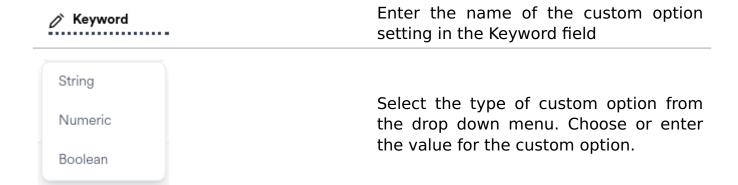

On occasion Administrators may find it necessary to further tailor SMB Shares in order to provide additional capabilities E.G. compatibility or performance tunings.

Pixstor supports additional SAMBA Custom Options per-share. Custom Options defined for a Space's Share are applied across all Sites where the Space is provisioned.

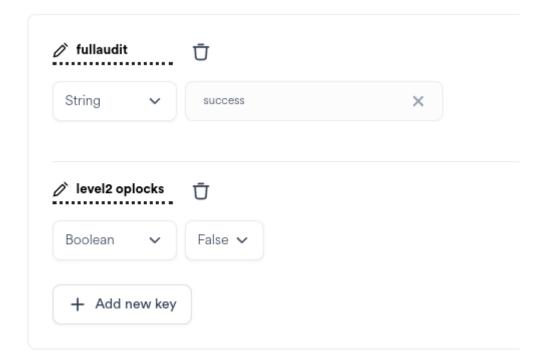

**Important:** SMB Custom Options are applied verbatium to the underlying SAMBA configuration. Incorrect entries can result in service outage.

Add a new Custom Option as follows:

+ Add new key	Click the Add new key to define a new custom option

## **Example of added Custom Options:**

To modify an existing custom option change the keyword, type or values as appropriate.

To delete a custom option select the bin icon next to the item.

#### **Admin Users**

Granted full permission to data in the Space to a specific set of users or groups:

#### Admin users

Users (username) or groups (@groupname) which will always have full control of all files.

- Add users by username
- Add groups by prefixing the group name with an @ character

**Hint:** For users or groups containing spaces or symbols, etc. use quotes. E.G. @"Domain Admins"

#### **Allowed Users**

Restrict the access to the share to a specific set of users or groups:

#### Allowed users

Users (username) or groups (@groupname) which are permitted to connect to the SMB share.

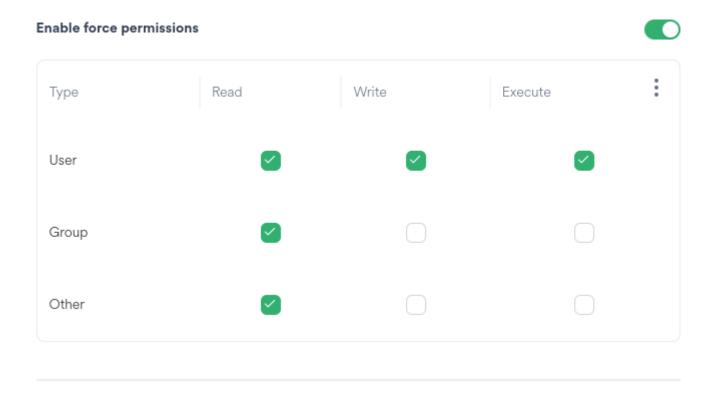

- Add users by username
- Add groups by prefixing the group name with an @ character

**Hint:** For users or groups containing spaces or symbols, etc. use quotes. E.G. @"Domain Admins"

#### Force permissions

In some scenarios it may be desirable to force the file and directory permissions to specific values in order to create a consistent known permission model. Typically this is observed where systems are not connected to Identity Management services such as Active Directory, LDAP or similar.

Set the permission overrides as required

#### Host access control

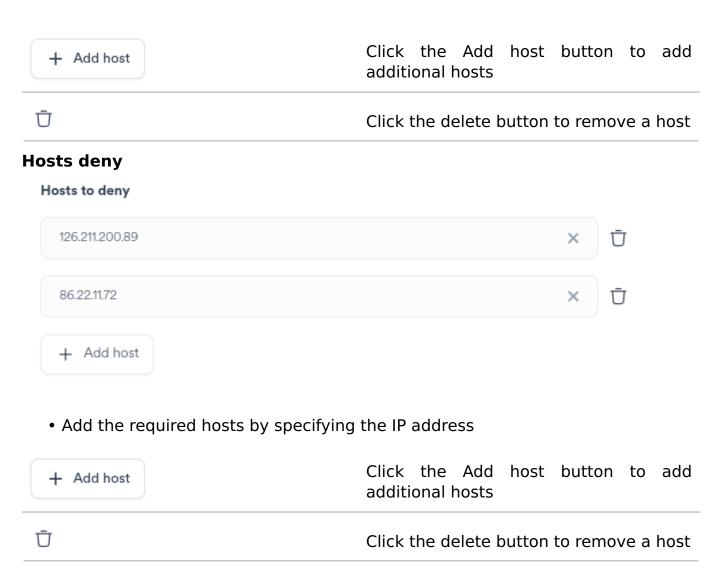

pixstor provides the ability to limit connectivity to specific network clients.

- 1. If no allow or deny options are defined pixstor will allow connections from any system.
- 2. If only a hosts allow option is defined for a share, only the network clients listed will be allowed to use the share. All others will be denied.
- 3. If only a hosts deny option is defined for a share, any network client which is not listed will be able to use the share.
- 4. If both a hosts allow and hosts deny option are defined, a network client must appear in the hosts allow and not appear in the hosts deny to access the share.

#### **Hosts allow**

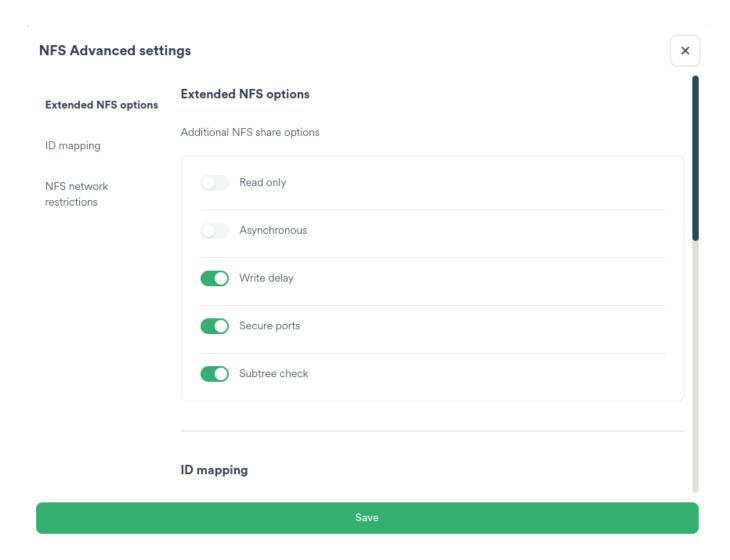

Add the required hosts by specifying the IP address

## NFS Advanced

## **Extended NFS options**

Modifying the extended NFS options controls the Share capabilities:

Select the available extended SMB options as appropriate:

Option	Description
Read only	If enabled then users of the Share may not create or modify files in the Space.
Asynchronous	Enable asynchronous reads and writes
Write delay	Reply to I/O requests only after the changes have been committed to stable storage at a cost of performance reduction.
Secure ports	Requires that NFS requests originate from a TCP/IP port from 1-1024
Subtree check	Check the accessed file is in the appropriate filesystem and also within the Share

# ID Mapping All Squash

All Squash maps all User IDs (UIDs) and group IDs (GIDs) to the anonymous user. This is useful for NFS-exported public FTP directories, news spool directories

# **Root Squash**

Root squash allows the root user on the client to both access and create files on the NFS server as root. This is conceptually equivalent to the Administrator in Windows.

Root Squash is needed if you are hosting root filesystems on the NFS server (E.G. for diskless clients). You should not use no\_root\_squash unless you are aware of the underlying implications.

## No Squash

No Squash allows the root user on the NFS client host to access the NFS-mounted directory with the same rights and privileges that the superuser would normally have.

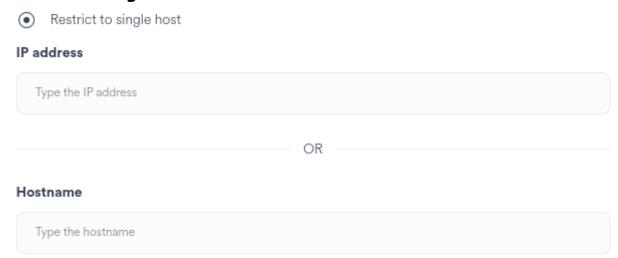

No squash (no uid/gid mapping)

#### **NFS** network restrictions

pixstor provides the ability to limit connectivity to specific network clients.

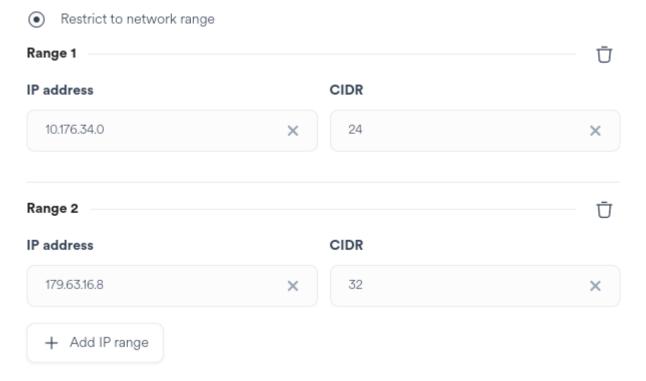

- Available to all clients
- Select the Available to all clients option for no restrictions

# **Restrict to single host**

 Add the required host to restrict by specifying the IP address or the FQDN hostname

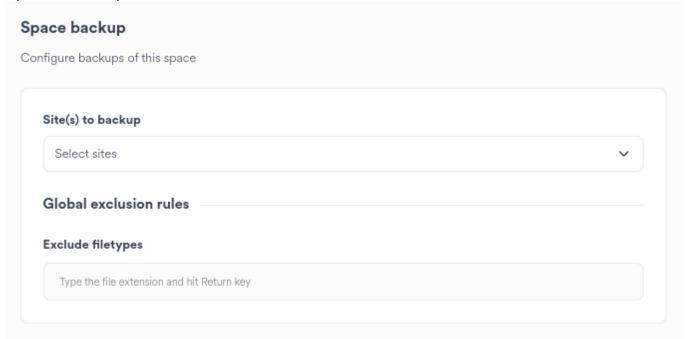

# Restrict to network range

 Add the required IP address or network range and specify a valid CIDR mask to apply the restriction

## Spaces backup

- Select the Sites which will perform backups for this space
- Define file extensions which must be excluded from backups across all Sites.
   E.G. \*.tmp

Choosing Site(s) to backup presents further backup options.

For more information refer to Backups.

**Important:** Multiple Sites are not permitted to backup to the same Ngenea Target.

# Jobs

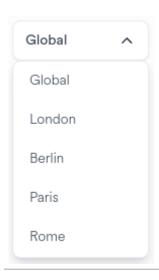

A job comprises one or more tasks, each of which perform an action.

Tasks can be data orientated (E.G. hydrate, dehydrate, SendToSite) or can be management or configuration tasks of pixstor sites and/or services.

# Viewing Jobs

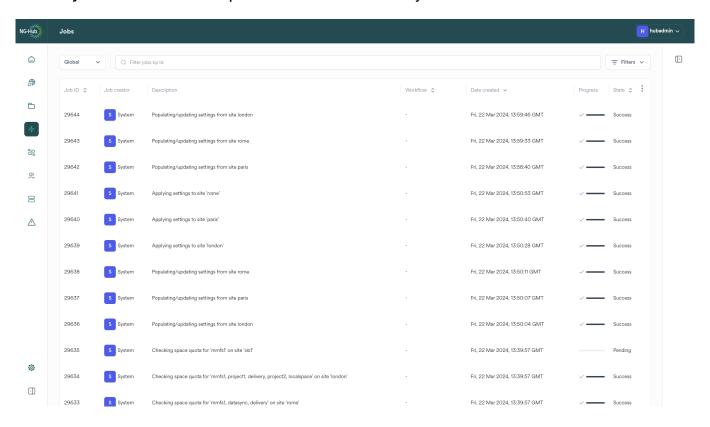

To view Jobs executed on a specific Site, select the Site from the Sites drop down menu or choose Global to display all Jobs from all Sites.

Click and select the site to show the jobs from the selected site.

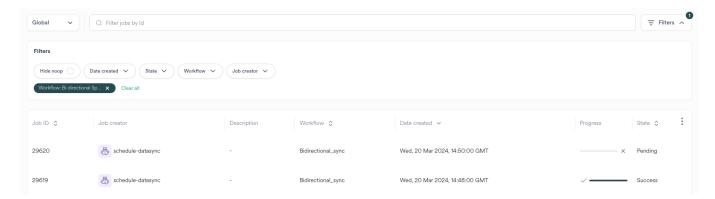

After selection the Jobs from the selected Site are displayed including high level information for each Job.

Click a Job ID to view in depth information for the job.

## Filtering the Jobs View

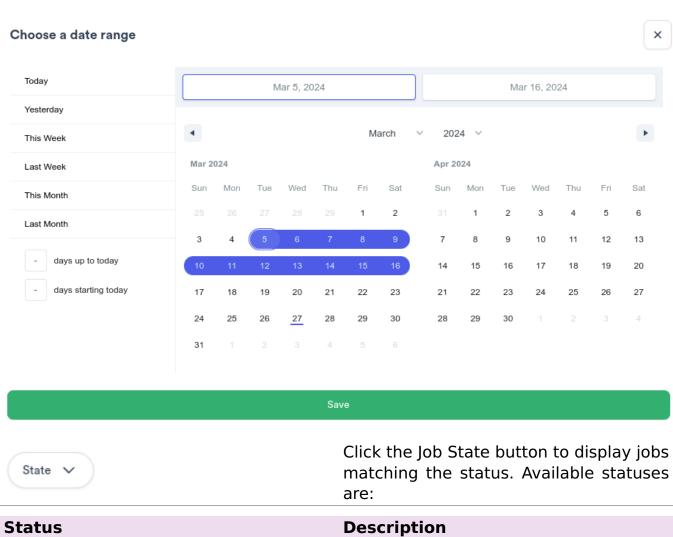

To display a specific Job ID, enter the ID in the filter bar.

Jobs for a site can be additionally filtered through selection of various criteria.

= Filters ^	Click the filter button to display the available filters. The number of applied filters is displayed on the Jobs filter button.
Hide noop	Select the Hide noop filter option to hide any job which did not perform any action as the job determined that no actions were required.
Date created 🗸	Click the Date Created button to filter for any job which was created between two date ranges.

Clicking the Date Created button raises the date selection dialog. Choose the criteria required and click the Save button to apply the date range.

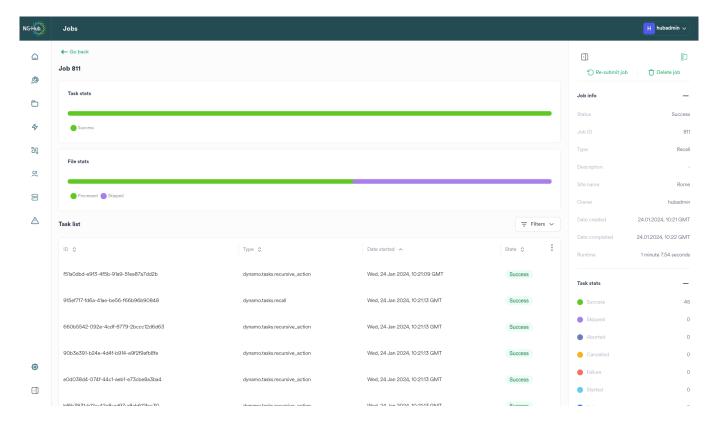

Status	Description
New	A job has been created
Pending	The job is waiting to run
Started	The job is running
Succeeded	The job finished successfully
Error	The job finished with one or more error conditions

Status	Description
Failure	The job finished with one or more failure conditions
Skipped	The job was skipped as the work assigned to the job was not required to be undertaken - no change would have occurred if the job had run.
Cancelled	The job was cancelled
Cancelling	The job is in the process of cancelling
Pausing	The job is in the process of Pausing
Unknown	The job experienced a result which could not be matched to a Status
Workflow V	Click the Workflow button to filter for jobs matching the Workflow. Available workflows are:
Туре	Description
Bi-Directional Sync	Data synchronisation between two sites
Delete File	Deletion of a designated data
Dehydrate	Dehydration of data
Pre-Stage	Staging of data to an Ngenea target. Subsequent dehydrations save time as there is no requirement to stage data prior to dehydration.
Hydrate	Hydration of data
Reverse Stub	Creation of dehydrated files not prior existing which reference data in an Ngenea target
Send	Deliver data from a source to a destination site
Send to Site (hydrated)	Deliver data from a source to destination site as hydrated files
Send to Site (dehydrated)	Deliver data from a source to destination site asdehydrated files
Sync Space to Site	Synchronising data from a source to a destination site
Transparent Recall	User or application initiated hydration of data on reading
Job creator 🗸	Click the Job creator button and select the name of one or more creator(s) to view jobs by the selected creator(s)

# Viewing a Job

Clicking a Job ID in the main Job screen displays the in depth information for the job.

The Job View comprises:

#### Task stats

The total count of types operation result per task is represented by the horizontal bar segments.

Hovering over the bar provides the count of each task status for the tasks processed.

#### File/Item stats

The total count of types operation result per item is represented by the horizontal bar segments.

Items may be files, directories or Objects.

Hovering over the bar provides the count of each type processed.

Bi-Directional Sync and Site Sync workflows only provide File stats.

# Enlarge/Reduce

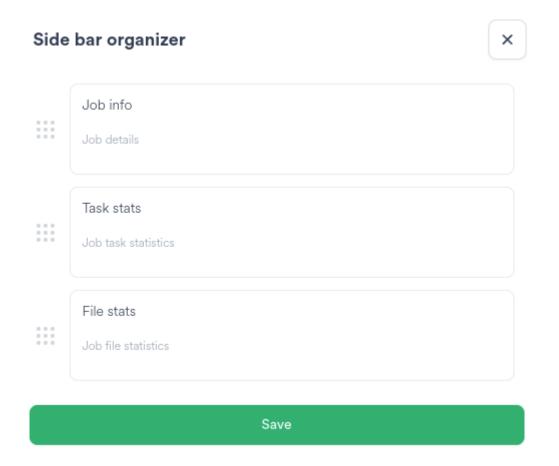

Clicking the toggle displays the Job Side bar to show:

- Job info
- Task stats
- File Stats (Item stats)

Clicking the toggle button again hides the Job Side bar.

# Reordering

Re-arrange items in top to bottom order by dragging vertically up or down.

# Job Controls

Jobs provide the following controls where supported by the Workflow:

	If supported by the Workflow, click the Pause job button to pause the Job. Tasks which are not running will be paused.
Resume job	If supported by the Workflow, click the Resume job button to resume a paused Job.
× Cancel job	Click the Cancel Job button to cancel any future tasks from running and no longer proceed with the Job
Re-submit job	Click the Re-submit job button to launch an identical Job on the Job queue
Ū Delete job	Click the Delete Job button to remove the records of the Job and associated tasks from the Hub database

# Job Info Summary

Provides an overview of high level information of the Job.

Job info	_
Status	Success
Job ID	30232

Runtime	24.23 seconds

# Job Info Task Stats

Jobs undertake tasks to process one or more actions, files, directories or objects as defined by the Workflow.

The Task stats displays the total count of types operation result per task.

Task stats	-
Success	7
Skipped	0
<ul><li>Aborted</li></ul>	0
Cancelled	0
Failure	0
Started	0
Pending	0
Unknown	0

## Item stats

The total count of types operation result per item is represented by the horizontal bar segments.

Items may be files, directories or Objects.

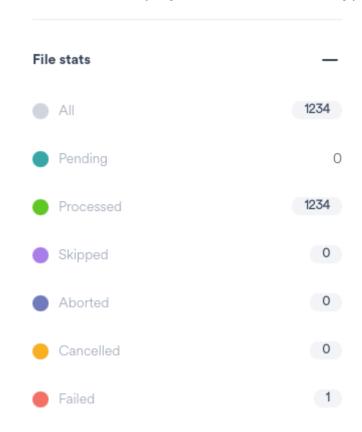

Hovering over the bar provides the count of each operation type for the files processed.

## File stats

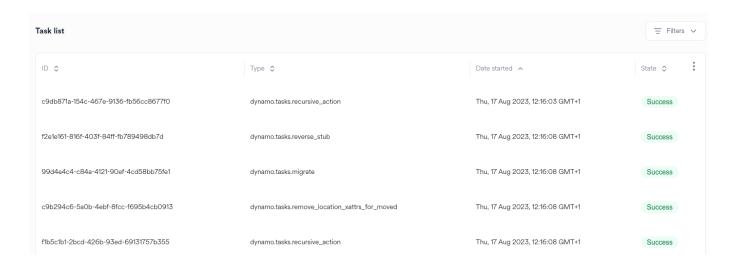

Bi-Directional Sync and Site Sync workflows only provide File stats.

The File stats displays the total count of types operation result per file or directory.

# The Job Task List

The Task list displays all tasks comprising a job, their ID, type, start time and status.

# Filtering the Job Task List

Tasks for a job can be additionally filtered through selection of various criteria.

= Filters ^	Click the filter button to display the available filters. The number of applied filters is displayed on the Task list filter button.
State V	Click the State button to display jobs matching the status. Available statuses are:
Status	Description
New	A task has been created
Pending	The task is waiting to run
Started	The task is running
Succeeded	The task finished successfully
Error	The task finished with one or more error conditions
Failure	The task finished with one or more failure conditions
Skipped	The task was skipped as the work assigned to the job was not required to be undertaken - no change would have occurred if the job had run.
Cancelled	The task was cancelled
Cancelling	The task is in the process of cancelling
Aborted	Whilst running, the task was unable to proceed correctly and aborted the in progress action
Paused	The task is paused
Pausing	The task is in the process of pausing
Unknown	The task experienced a result which could not be matched to a Status

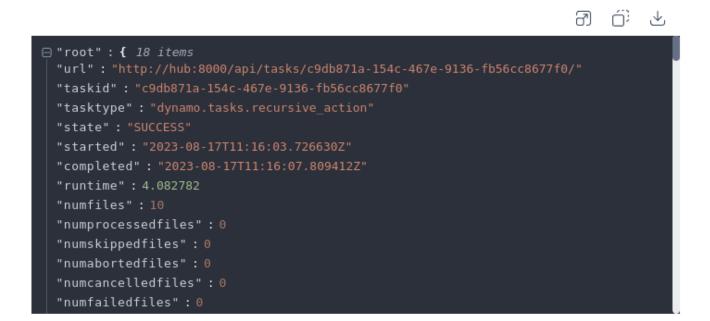

Click the Task type button to filter for a specific task type which comprises the Job. The task types are dynamic therefore the displayed types may differ per job type.

## Task information Dialog

Clicking a task ID in the Job Task List displays the information for the chosen task.

Task: c9db871a-154c-467e-9136-fb56cc8677f0

Dependent on the number of operations and the quantity of inputs to the task, the information displayed can range from short to extensive.

Optionally select an action button to more easily view the Task Information.

ව	Click the Full Screen button to display the Task Information in a larger view
Ö	Click the Copy button to copy the Task Information output to the clipboard.
<b>业</b>	Click the Download button to download the Task Information locally
×	Click the Close button to close the Task Information dialog

## Scheduling

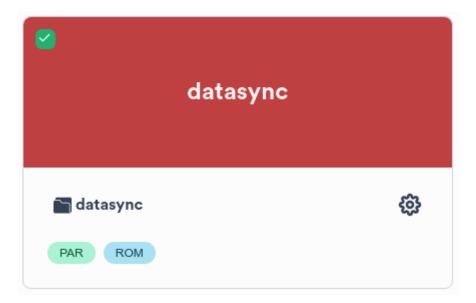

Hub can regularly perform the same action to a Space via Job Schedules.

Spaces which are deployed with Bi-Directional Sync automatically have a Schedule added.

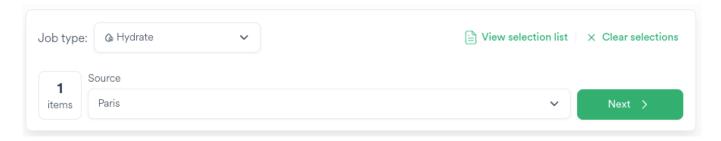

Schedules can be added to the entirety of a Space. It is not possible to schedule more granular activities within a Space (E.G. regular Hydration of an individual file or directory).

## Adding a Schedule

To add a Schedule to a Space, select the Space checkbox at the top left of the Space Card.

Selecting the checkbox shows the Job Creator Panel.

For further information refer to Using the Job Creator Panel.

After selecting any chosen requirements for the Job Creator Panel, the Configure workflow fields panel is raised.

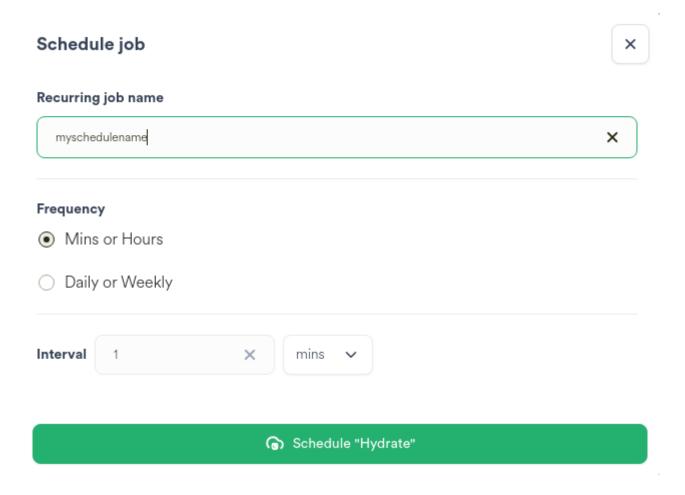

If the job is to be immediately run, click the larger titled button related to the chosen Workdlow (E.G. Hydrate). Alternately the Job can be Scheduled to run later.

To Schedule the Job to run later, click the Schedule button.

Click the Schedule button to Schedule the Job for later

The Schedule button raises the Schedule Job dialog.

- Enter the name of the Schedule
- Select the desired Schedule settings
- Click the Schedule button to create the Schedule

## **Editing Schedules**

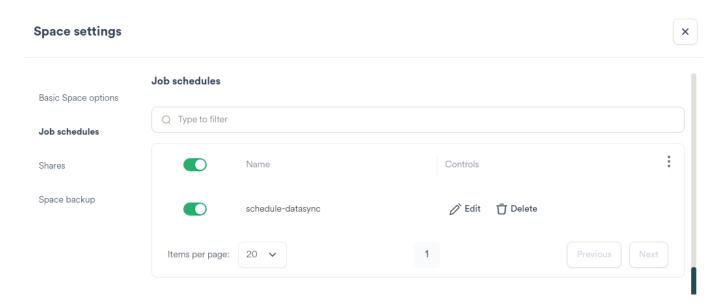

Schedule settings can be modified as required.

Clicking the Settings button on the Space card raises the Settings dialog for the Space.

**Important:** Adding or Configuring a Space can only be performed by a Hub Administrator or User with Space Administration rights granted through group management.

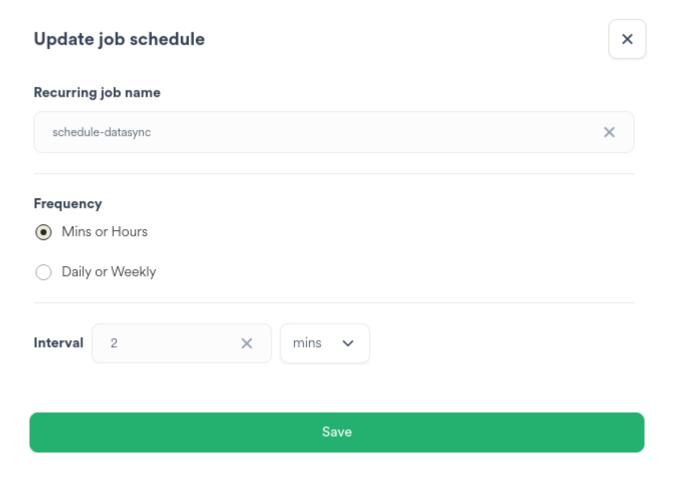

Click the Job Schedules menu item on the Space settings dialog.

The Schedules for the Space are viewable.

Clicking the Edit button raises the Update job schedule dialog.

- Modify the desired Schedule settings
- Click the Save button to store the modified Schedule settings

# **Deleting Schedules**

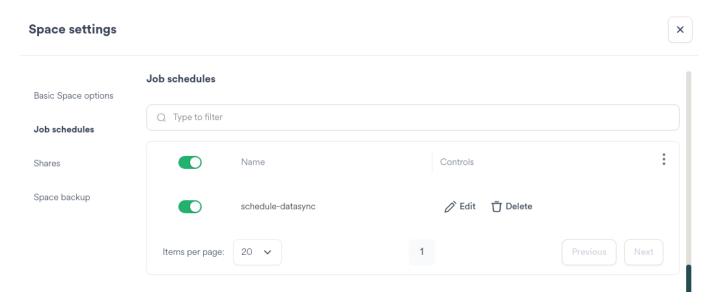

Schedules no longer required can be removed from Hub.

Clicking the Settings button on the Space card raises the Settings dialog for the Space.

**Important:** Adding or Configuring a Space can only be performed by a Hub Administrator or User with Space Administration rights granted through group management.

Click the Job Schedules menu item on the Space settings dialog.

The Schedules for the Space are viewable.

**Tip:** Deleted Schedules are non-recoverable. If a Schedule has been inadvertently removed, do not press the Save button, instead click off the Space settings dialog to the main area of the screen.

Clicking the Save button at the bottom of the Space settings dialog saves any changes made.

# Groups & Users

Hub provides management of Groups and Users internally.

Users may be authenticated by external directory services such as LDAP or Active Directory.

Two default groups are provided:

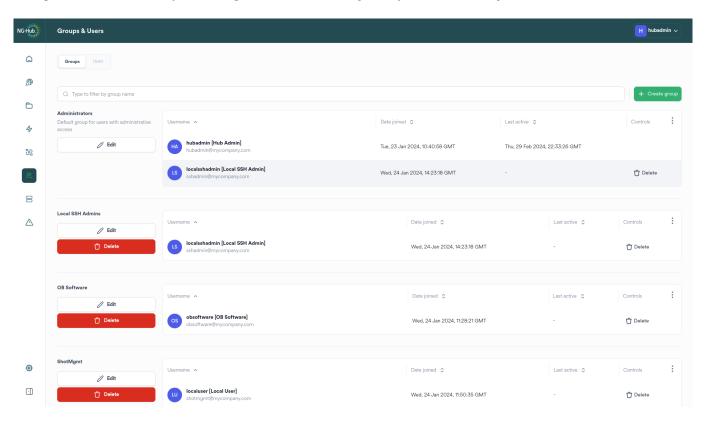

- Members of Administrators can configure and manage all Sites and Spaces
- Members of Users have read-only access to all Spaces

Additional groups can be deployed to provide restricted access for users to Sites and Spaces.

# Viewing Groups

To view the available Groups managed in Hub, select the Group tab.

**Important:** Group management can only be performed by a Hub Administrator.

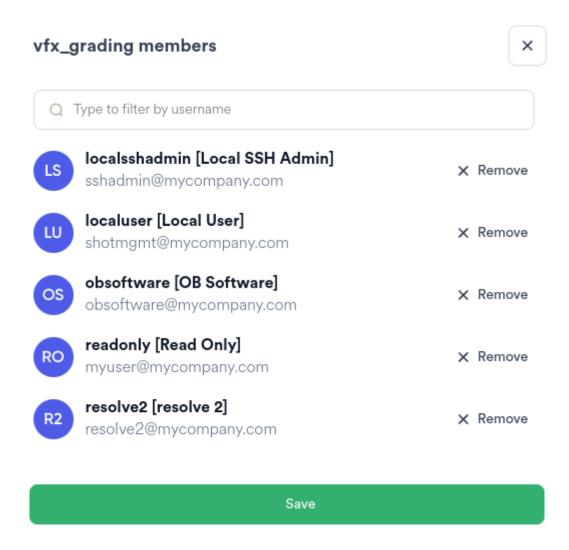

The Groups tab provides the following actions:

- Group creation
- · Group deletion
- Group member management

Click the View all members button to view all the members of the group

Clicking the View all members button raises the Group Membership dialog.

To filter for a User within the list of group members enter a keyword in the Filter for...

Q Type to filter by username

The displayed Users is limited to the sites which match the keyword(s).

X Remove Click the Remove button to remove a User from the Group

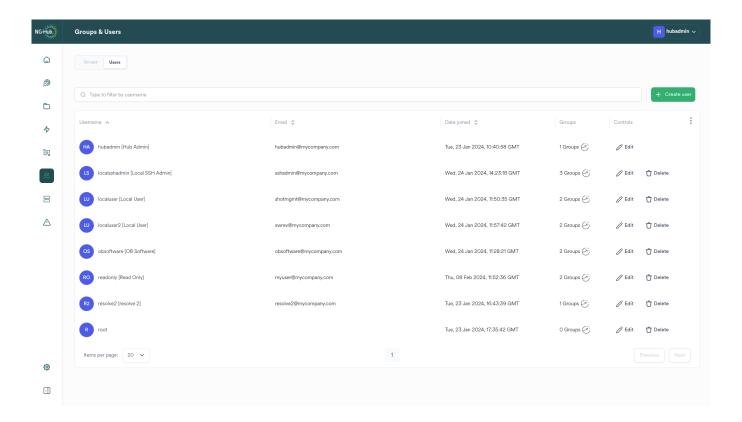

**Tip:** If a User has been inadvertently removed, do not press the Save button, instead click off the Group members dialog to the main area of the screen.

Clicking the Save button at the bottom of the Group members dialog saves any changes made.

# Viewing Users

To view the available Users managed in Hub, select the Users tab.

**Important:** User management can only be performed by a Hub Administrator.

# Restricting Users from Spaces

All users in the group Users have read-only access to all Spaces.

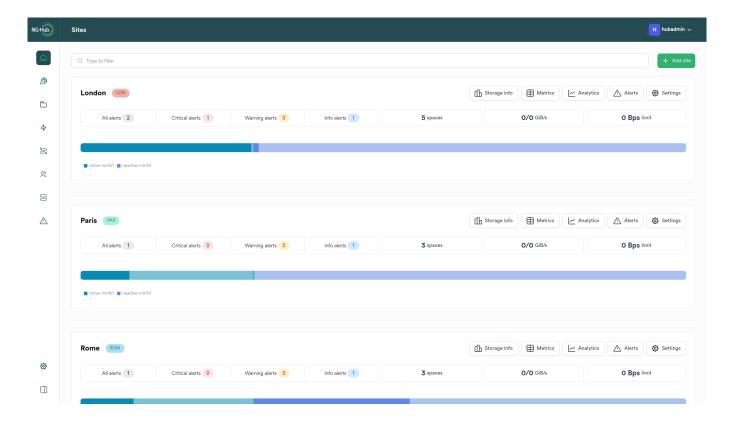

Should it be required to restrict a user from accessing specific spaces Spaces this can be achieved by:

- 1. Creating a new user group
- 2. Ensuring that only the specific spaces are assigned to the group
- 3. Add specific users to the group
- 4. Ensure the specific users are removed from the group Users

**Caution:** Adding a Space to a group's Administered Spaces and Used spaces will allow assigned Users to change the settings for a Space. If administrative operations are not required, do not assign Spaces to Administered Spaces - create an additional group to allow specific users to administrate specific spaces.

## Sites

A site is a physical or cloud based pixstor server managed by Hub.

# Filtering Sites

To filter for a site within the list of sites enter a keyword in the Search for...

The displayed sites is limited to the sites which match the keyword(s).

## The Site Card

Each site is displayed as a site card.

A Site is displayed as a card in the Sites view.

A Site Card comprises:

## Site Name

London LON

Displays the designated friendly name of the site with the ngenea site chip

# Site Summary

The site summary displays high level totals for the number of files and folders present, the ngenea hydrated and dehydrated states and the number of Spaces the site hosts.

## **Alert Types**

Numbered filter buttons display the count of each type of Alert for the Site.

Select a button to open the Alerts for the Site, filtered for the specific Alert type.

All alerts 6	Click the All alerts button to view all alerts
Critical alerts 3	Click the Critical alerts button to filter for all Critical alerts
Warning alerts 0	Click the Warning alerts button to filter for all Warning alerts
Info alerts 3	Click the Info alerts button to filter for all Info alerts
Storage Info	
Storage info	Click the Storage info button to open the Storage Info browser for the Site.
Site Metrics	
Metrics	Click the Metrics button to open the pixstor nexus site metrics in a new browser tab.
Site Analytics	
✓ Analytics	Click the Analytics button to open the pixstor nexus site analytics in a new browser tab.

## Site Alerts

Click the Alerts button to open the Alerts for the Site.

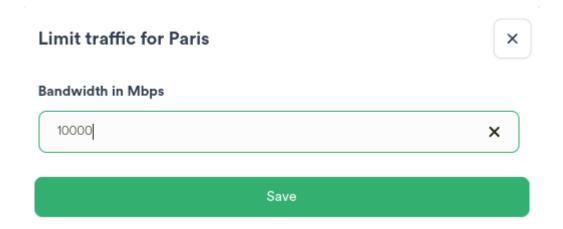

#### **Bandwidth Control**

If bandwidth control has been enabled by a Hub Administrator with CLI access, the bandwidth of a site can be limited to a defined value. The current value is observed on the bandwidth limit button.

Click the bandwidth limit button to display the bandwidth control dialog.

The bandwidth control dialog allows limiting the bandwidth of a site to a defined value. Enter the limit in Megabits per second (Mbps) and press Save to apply the limit.

**Hint:** If the bandwith for a site has been inadvertently set do not press the Save button, instead click off the Bandwith limit dialog to the main area of the screen.

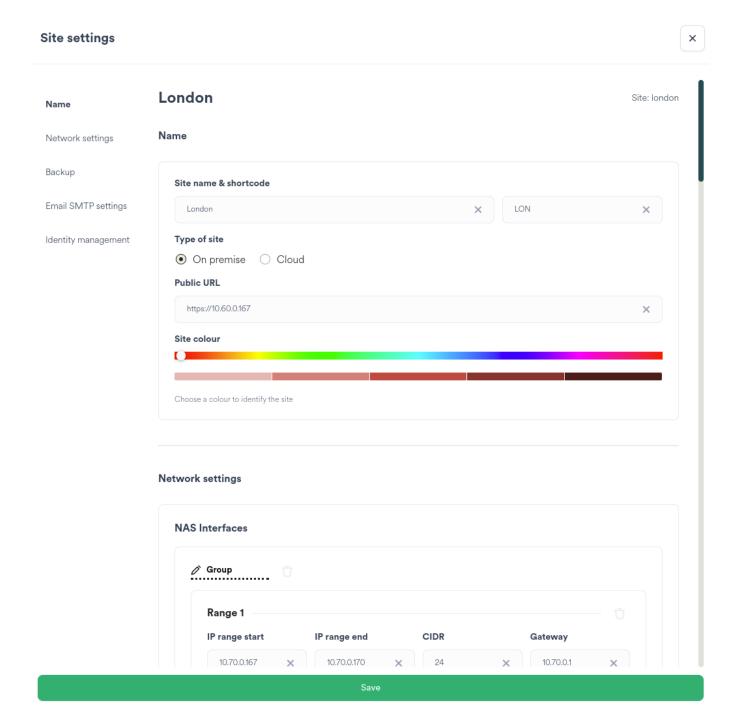

Important: This function can only be performed by a Hub Administrator.

#### Settings

**Important:** This function can only be performed by a Hub Administrator.

Click the site's Settings button to display a dialog to configure the selected site.

• Modify the Site settings as required. Refer to Adding a Site for settings guidance.

## **Pool Space**

One or more pixstor storage pools which comprise the pixstor file system are represented.

Hovering over the pool percentage bar provides the remaining capacity for the pool.

# Adding a Site

## Add Site Wizard

Hub allows remote configuration of all participating pixstor sites.

New sites are automatically joined to Hub awaiting optional configuration via the Site Wizard.

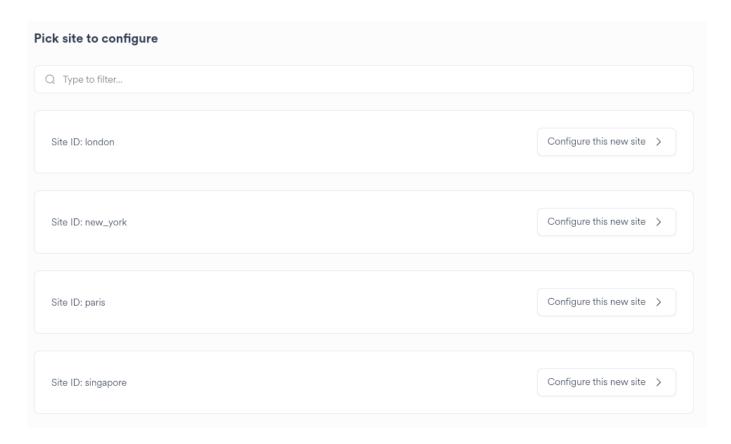

# Navigating the Wizard

×	Click the close button to exit the wizard. Changes are not saved.
Next >	Click the Next button to advance to the next page of the wizard. The Next button is disabled until all required page elements are completed.
← Go back	Click the Go Back button to return to the previous wizard page.
Finish & Create >	Click the Finish & Create button to apply the changes displayed on the wizard summary page.
Add Site	
+ Add site	Click the Add site button to display a dialog to configure the selected site.

**Important:** This function can only be performed by a Hub Administrator.

# Pick site to configure

Sites which have been automatically registered to Hub but not yet configured are shown:

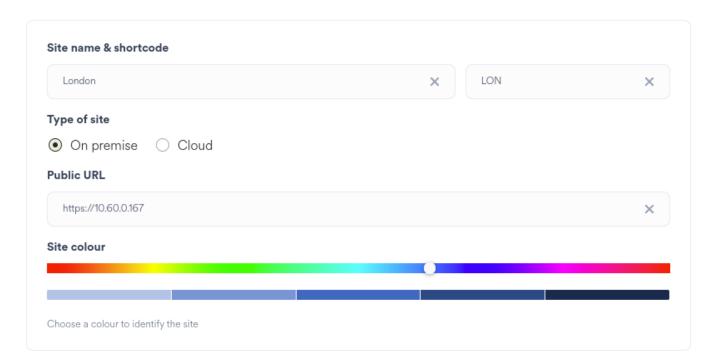

• Select a site to configure

Click the Configure this new site button to proceed

#### **Site Name**

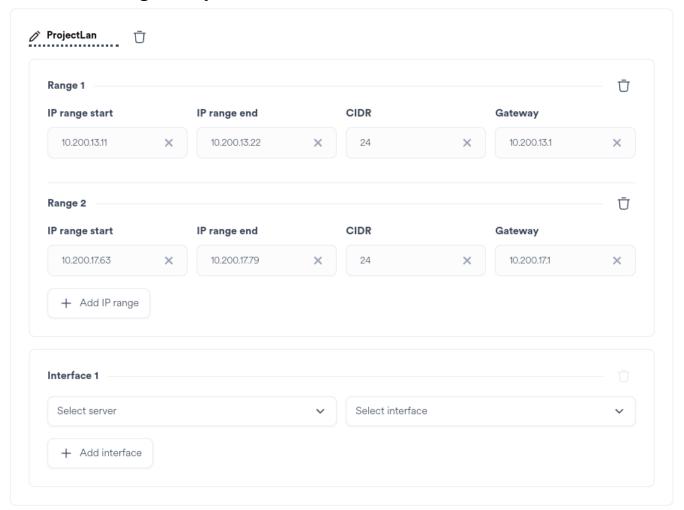

Name

- Provide a friendly name for the Site
- Provide a 3 character short code for the site. The shortcode is displayed as the label on the Site's chip. E.G. LDN for London

- Specify whether the site is on-premise or a pixstor cloud deployment. Each site type provides different Network Setting options.
- Provide the URL IP or FQDN which refers to the pixstor management node of the Site
- Select a colour for the Site chip

## **Network Settings (On premise)**

- Add the required IP address or network range and specify a valid CIDR mask to apply the restriction
- Specify a gateway, if required
- Select the server(s) and interface(s) of the server where the IP range will be configured

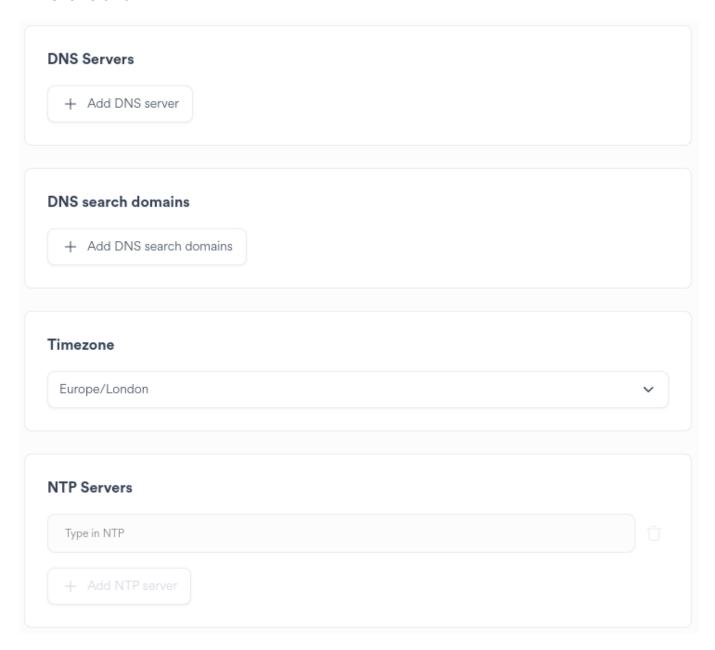

+ Add IP range	Click the Add IP range button to add additional restrictions
+ Create another group	Click Create another group to add additional IP range to interface mapping groups
Ū	Click the delete button to remove an IP range or Interface group

# **Network Settings (Cloud & General)**

pixstor cloud systems use predefined network architectures.

Unlike on-premise pixstor systems there is no requirement to create IP ranges or interface groups. IP addressing is externally managed by the cloud / virtual environment.

Both on-premise and cloud systems share common network configuration for DNS, Timezone and NTP.

- Specify the IP address or FQDN hostname of one or more DNS servers
- Specify one or more DNS search domains
- Specify the Timezone in which the server resides, or will participate in
- Specify the IP address or FQDN hostname of one or more DNS servers

**Hint:** If the pixstor site will be joined to an external Identify Mapping service such as Active Directory or LDAP, best practice is to ensure that the DNS and NTP servers match those of the service, or point at the service hosted DNS and NTP if it provides such capabilities. Should the pixstor become out of time sync with the Identify Mapping service login failures can occur.

## **Backup**

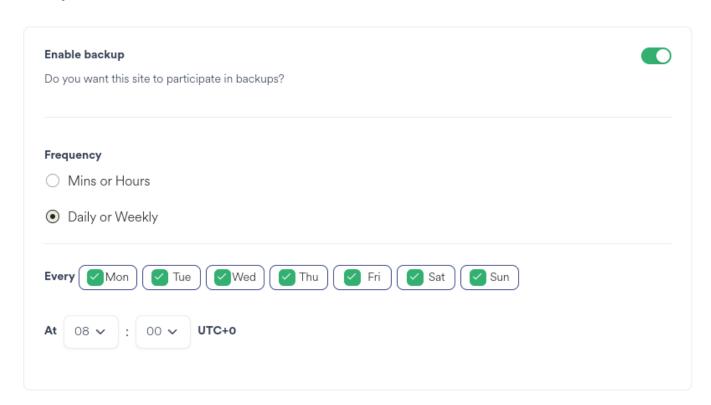

pixstor provides the capability to backup data within a Space on a per-Site basis to specific Ngenea Targets.

Hub enables configuration to be set for the Ngenea Backup service running on pixstor sites.

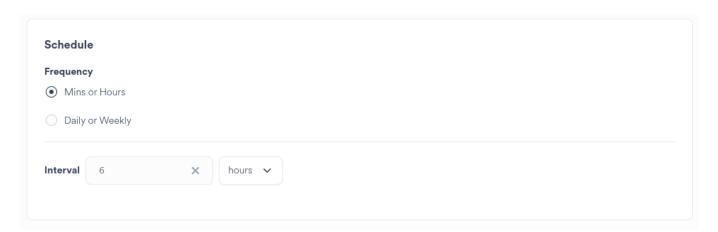

If the Site is enabled to participate in backups, each Space requires additional configuration to enable the per-Space backup.

For more information refer to Backups.

#### Backup

Determine the required frequency of the backup.

Choosing Mins or Hours will ensure that the schedule will run on the next interval set.

E.G: \* 1 hour: The backup will run on the next hour (12.00, 13.00) \* 15 mins: The backup will run on the next 15 minute interval past the hour (15, 30, 45, 00)

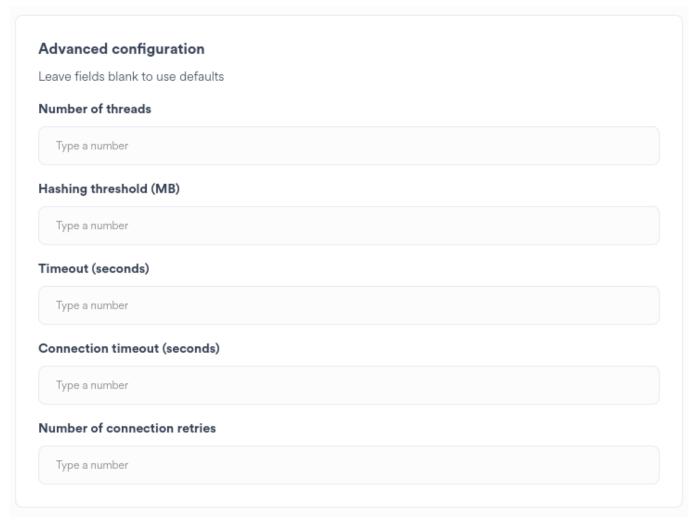

Sched	lie
Freque	су
O Mir	s or Hours
<ul><li>Dai</li></ul>	y or Weekly
Every	✓ Mon Tue ✓ Wed ✓ Thu Fri ✓ Sat ✓ Sun
, (	
A. 10	05   1170.00
At 12	

Choosing Daily or Weekly allows the backup to be scheduled once per chosen day at a specific time of day.

**Hint:** The schedule time is in UTC+0. You may need to account for any timezone offset of the site when scheduling.

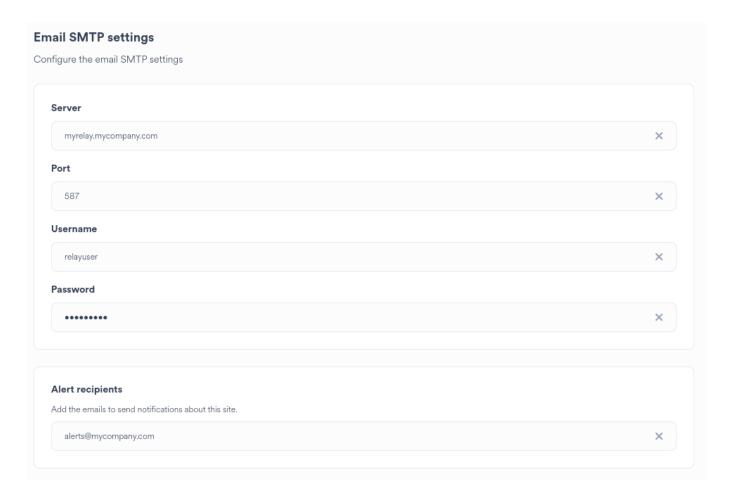

Optional tuning can be set for the backup operation in the Advanced Configuration.

Refer to the Ngenea Backup documention prior to applying any parameters.

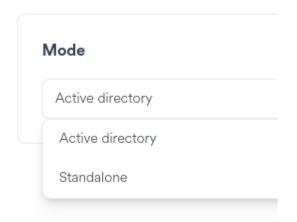

# **Email SMTP Settings**

pixstor provides the capability to notify an inbox if service issues arise.

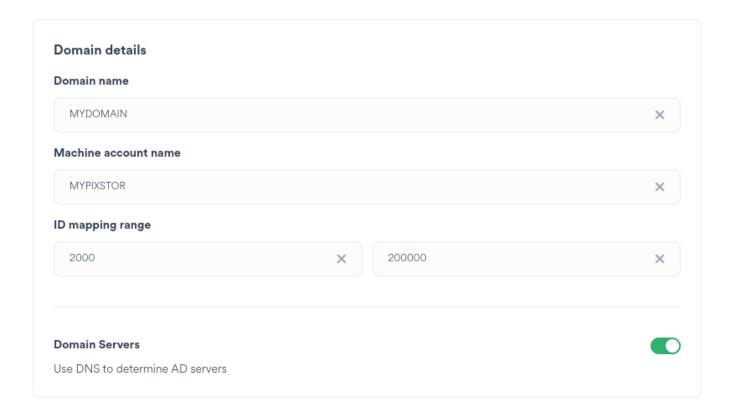

- Specify the SMTP configuration of an email server to which to send notification emails
- Specify one or more valid email addresses to receive the notification emails

# **Identity Management**

• Specify the Identity Management mode as appropriate:

Mode	Description
Active Directory	pixstor uses RFC2307 compliant identity mapping with Active Directory
Standalone	pixstor generates local UIDs and GIDs mapped to Active Directory SIDs

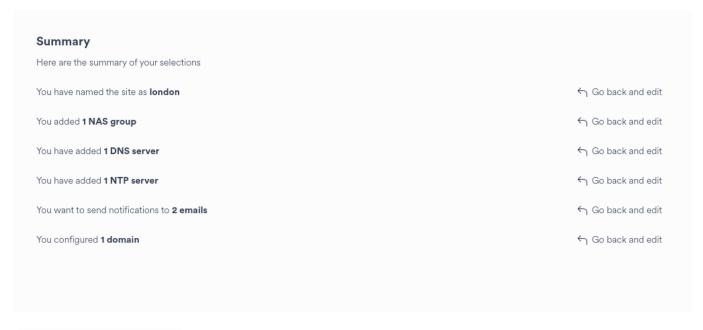

- Specify the Domain to join
- Specify the Machine account name
- Specify the ID range to map to
- Specify whether to use DNS to locate an Active Directory Domain Controller or alternatively specify an IP address or hostname

• Specify a valid username and password with domain join capability

## **Summary**

Upon completing the wizard steps a summary is presented:

Finish & Create >

Click the Finish & Create button to apply the changes displayed on the wizard summary page.

Alternatively Go back and change the proposed configuration as required or close the wizard to cancel the creation of the ngenea target.

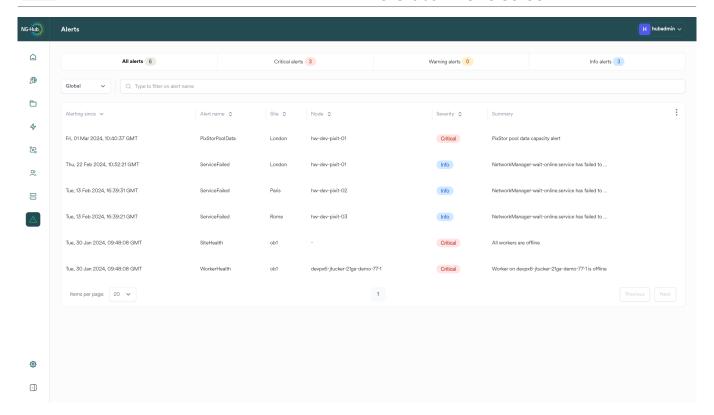

## **Alerts**

Hub provides a view of alerts across all Sites.

- · Only active alerts are displayed
- Muted alerts are not displayed

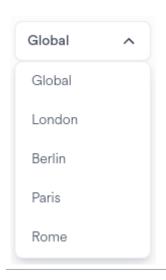

Click the alerts button to navigate to the Global Alerts screen

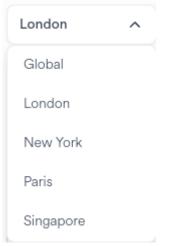

Hub provides two views of Alerts - Global and Local.

- Global displays all Alerts on all Sites
- Local displays the Alerts on a specific Site

The default view of Alerts is Global.

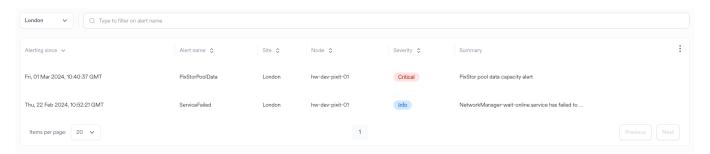

To switch to a site-centric view, select the specific site from the Alerts dropdown menu.

To switch to Global view, select Global from the Alerts drop-down menu.

# Choosing a specific Site displays Alerts only from the chosen Site:

## Alert Types

Above the Alert table, numbered filter buttons display the count of each type of Alert.

Select a button to filter for the specific Alert type.

Click the All alerts button to view all alerts

Critical alerts 3	Click the Critical alerts button to filter for all Critical alerts
Warning alerts 0	Click the Warning alerts button to filter for all Warning alerts
Info alerts 3	Click the Info alerts button to filter for all Info alerts

# Categories

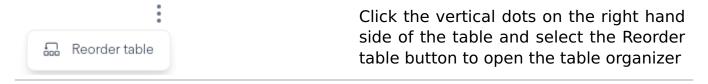

To filter for an Alert category, enter text into the filter bar.

Alerts are filtered where the Alert name matches the text in whole or part.

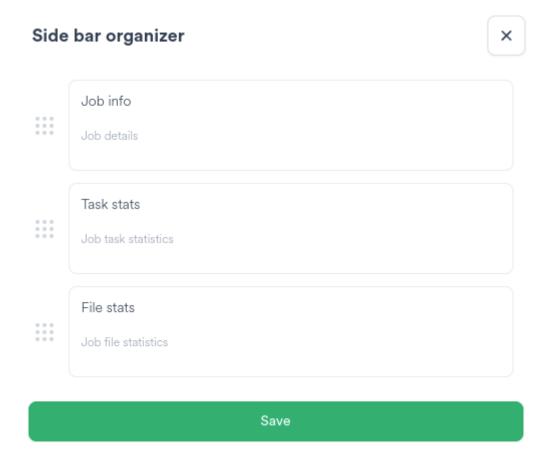

# Reordering

The alerts table columns can be reorganised for user preference.

Re-arrange items in top to bottom order by dragging vertically up or down.

# **Global Settings**

The global settings page controls settings which are applied across all pixstor sites participating in hub management.

Click the settings button to navigate to the Global Settings screen

# **Ngenea Targets**

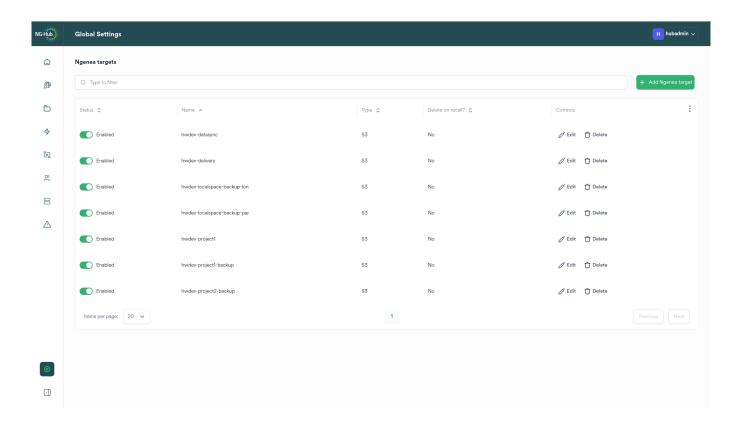

ngenea provides the capability to off-site data or send data between pixstor sites. The destination for the data is known as a target.

ngenea targets provide the association between the pixstor file system and the target.

Typically a target is mapped to the location of a Space on the pixstor file system.

# Viewing Ngenea Targets

Clicking the global settings button in the main menu bar displays the list of ngenea targets:

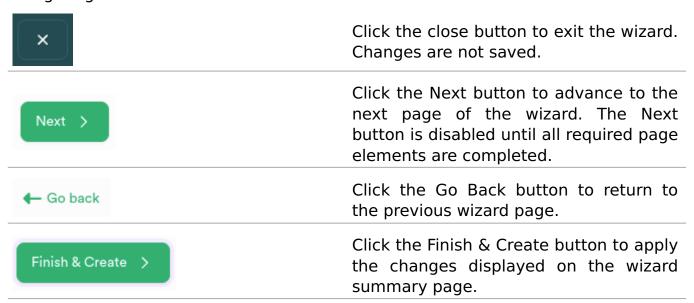

## Filtering Ngenea Targets

Q Type to filter...

To filter the list of ngenea targets, type the target or part of a target name in the filter bar.

## Ngenea Target Wizard

## Navigating the Wizard

### Adding a Ngenea Target

**Important:** This function can only be performed by a Hub Administrator.

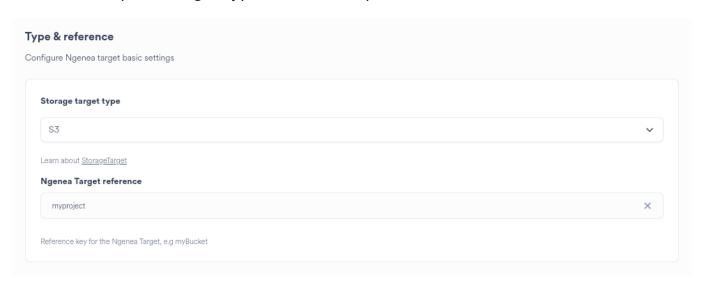

Click the Add Ngenea target button to start the Ngenea Target Wizard

# Type & reference

Ngenea supports the following storage target types:

Storage Target Type	Description
S3	AWS S3 and S3 compatible targets
Microsoft Azure	Azure Blob Storage
SpectraLogic BlackPearl	Spectralogic DS3 targets
Google Object Storage	Google Cloud Storage

Select the required target type from the drop down menu.

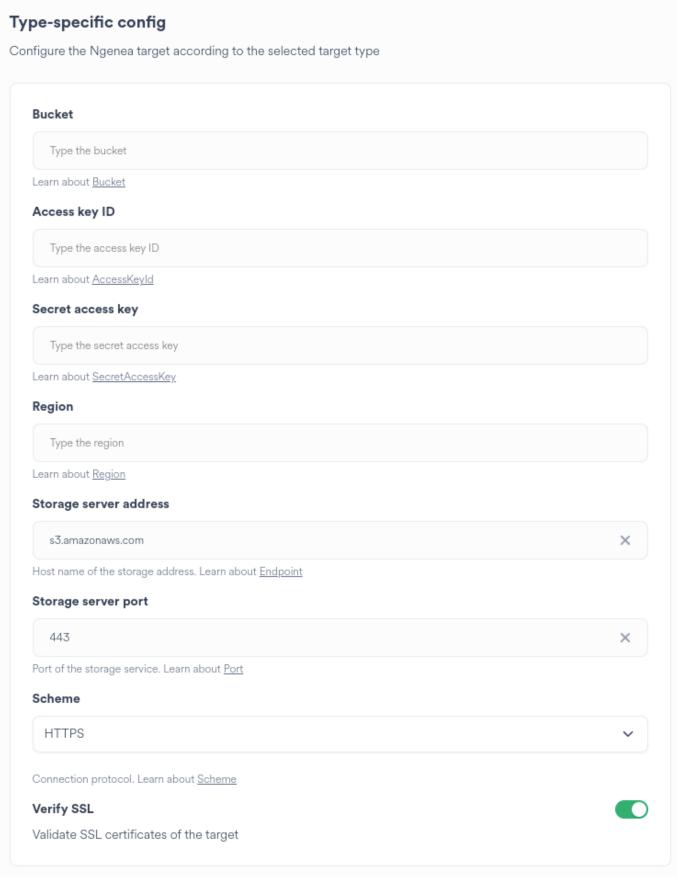

Enter a 'friendly name' for the ngenea target reference.

## E.G.:

- myproject (such as 'deepspace')
- mydepartment (such as 'graphics')
- a descriptive phrase (such as 'referencematerial')

Depending on the Storage target type selected a Type-specific configu

# Type-specific config AWS S3 or compatible

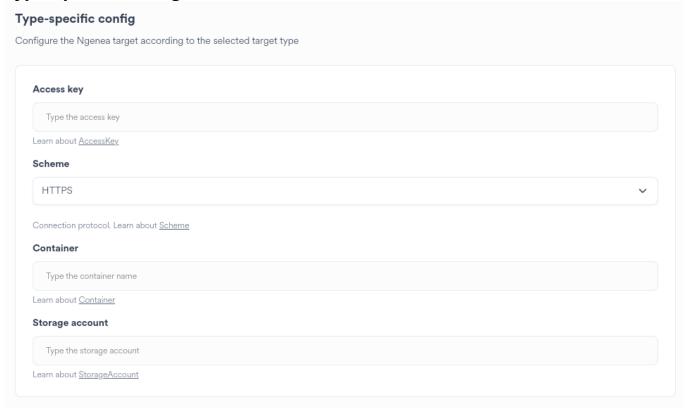

Enter the settings as required, which must match those set in the S3 object storage provider:

Setting	Description
Bucket	The name of the storage bucket as
	specified at the object storage service.

Setting	Description
Access key ID	The unique access key for the AWS user account performing data transfers.
Secret access key	The unique security key for the AWS user account performing data transfers.
Region	The AWS (or S3 compliant provider) region hosting the S3 Cloud Storage
Storage server address	Not used for Amazon S3 Cloud Storage. For services which reside at specific IPs, such as AWS Snowball, MinIO or LocalStack, specific the host or IP address to connect to.
Storage server port	The TCP/IP port used to communicate
Scheme	HTTP or HTTPS transfer. HTTPS is recommended. Data integrity cannot be guaranteed over HTTP transfer schemes.
Verify SSL	Whether to verify the SSL connection of the target. Disabling the SSL verification allows connections to storage targets which do not provide valid SSL certificates. Connecting to invalid SSL certificates is insecure.

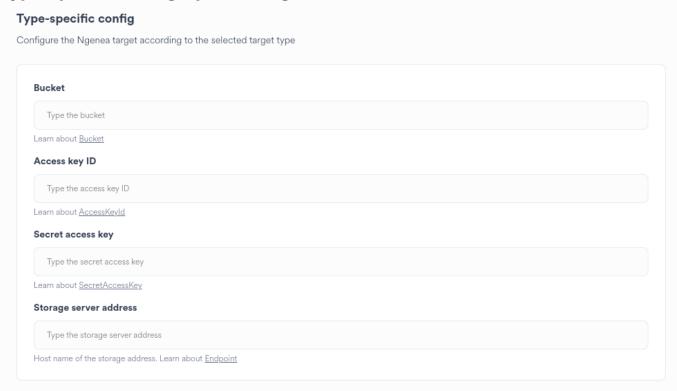

**Type-specific config Microsoft Azure** 

Enter the settings as required, which must match those set in the Azure object storage provider:

Setting	Description
Access key ID	The unique access key for the Azure user account performing data transfers.
Scheme	HTTP or HTTPS transfer. HTTPS is recommended. Data integrity cannot be guaranteed over HTTP transfer schemes.
Container	The storage container for the blob data.
Storage account.	The Azure namespace containing the Container

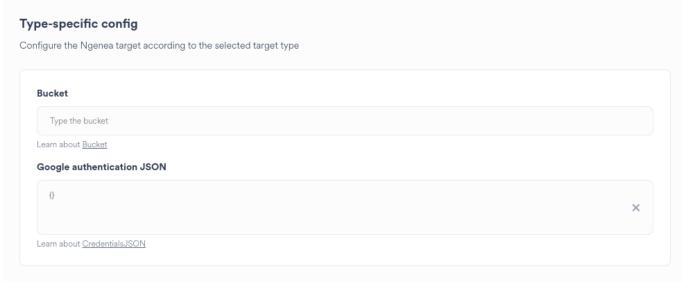

**Type-specific config Spectra Logic BlackPearl** 

Enter the settings as required, which must match those set in the BlackPearl DS3 object storage provider:

Setting	Description
Bucket	The name of the storage bucket as specified at the object storage service.
Access key ID	The unique access key for the BlackPearl user account performing data transfers.
Secret access key	The unique security key for the BlackPearl user account performing data transfers.
Storage server address	The FQDN hostname of the BlackPearl.

## **Type-specific config Google Object Storage**

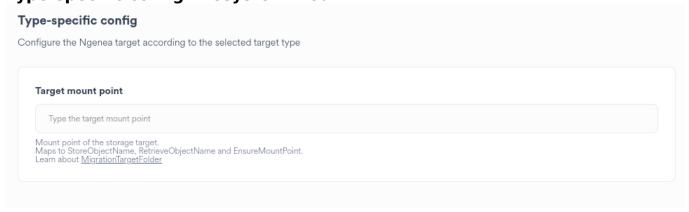

Enter the settings as required, which must match those set in the Google Cloud Storage object storage provider:

Setting	Description
Bucket	The name of the storage bucket as specified at the object storage service.
Access key ID	Enter the contents of the JSON key for the user or service account granted permission to transfer data to Cloud Storage bucket. For more information refer to Google documentation

**Important:** If the Ngenea Target is to be used as a backup only target, do not define JSON information in the Google Authentication JSON. Instead define keyword CredentialsFile with the path to the file containing JSON credentials on pixstor. For more information refer to Backup Only Ngenea Targets.

# Type-specific config Filesystem Mount

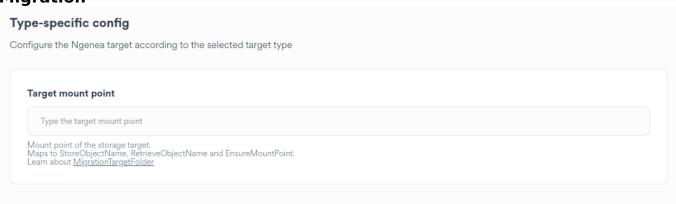

Enter the settings as required, which must match the location of the NAS mount point on the pixstor:

**Important:** Target mounts points are site-specific however Hub will create the target across all sites.

Setting	Description
Target mount point	The location of the POSIX compliant mounted storage. E.G. If the external POSIX storage is mounted on /mmfs1/
	myexternalnas enter /mmfs1/
	myexternalnas

# **Migration**

Configure the migration settings as required to handle data migration accordingly:

Setting	Description
File match	Refer to the RegEx Filters example table below
Delete on recall	Determines whether to delete the recalled data from the external storage target after the data has been successfully recalled.
Backup-only target	Determines whether the target will be used to hold backup, not live data. Required to backup a Space. Refer to Backup Only Ngenea Targets

Example regex filters where a space named myspace is present on the pixstor filesystem at location /mmfs1/data/myspace:

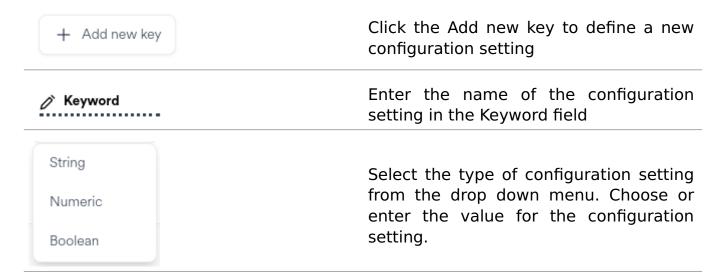

RegEx Filter Examples	Outcome
<pre>/mmfs1/data/myspace/(.*)</pre>	Data with the myspace folder is eligible for ngenea operations. Dehydrated files within the myspace folder are present at the root of the storage target.
<pre>/mmfs1/data/(myspace/.*)</pre>	The myspace directory and data within is eligible for ngenea operations. The myspace folder is present at the root of the storage target.
<pre>/mmfs1/data/myspace/subdirectory/ (.*)</pre>	Data with the subdirectory of the myspace directory is eligible for ngenea operations. Dehydrated files within the subdirectory of the myspace directory are present at the root of the storage

RegEx Filter Examples	Outcome
	target. The myspace directory is not present. Data immediately within the myspace directory (other than that within the subdirectory) is not eligible for ngenea operations.
<pre>/mmfs1/data/myspace/ (subdirectory/.*)</pre>	The subdirectory of the myspace directory and data within is eligible for ngenea operations. The subdirectory of the myspace directory is present at the root of the storage target. The myspace directory is not present. Data immediately within the myspace directory (other than that within the subdirectory) is not eligible for ngenea operations.

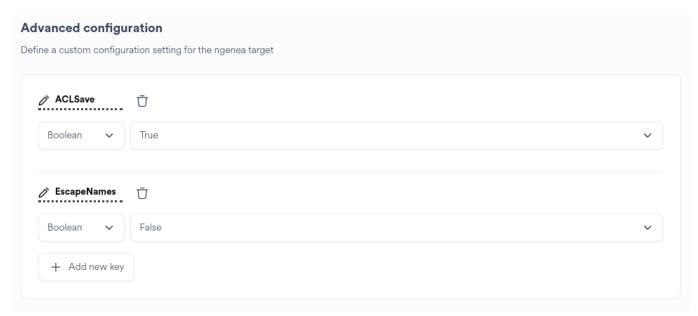

## **Advanced configuration**

To add configuration settings to a target to control specific behaviour during ngenea data operations.

Example of added Advanced configuration settings:

## **Summary**

Upon completing the wizard steps a summary is presented:

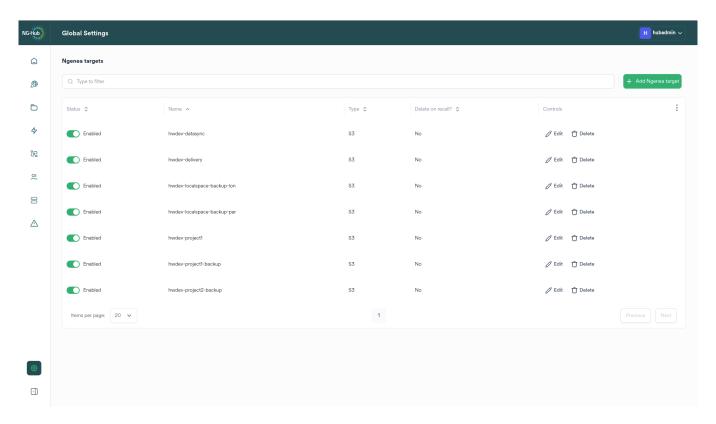

Alternatively Go back and change the proposed configuration as required or close the wizard to cancel the creation of the ngenea target.

## Editing an Ngenea Target

**Important:** This function can only be performed by a Hub Administrator.

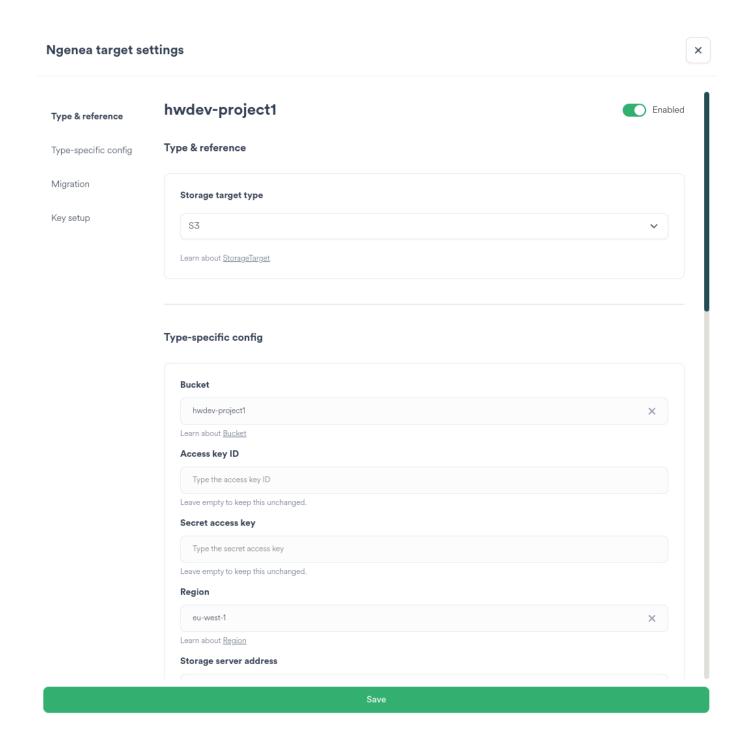

Clicking the global settings button in the main menu bar displays the list of ngenea targets:

Click the edit icon on the required ngenea target row to edit the ngenea target

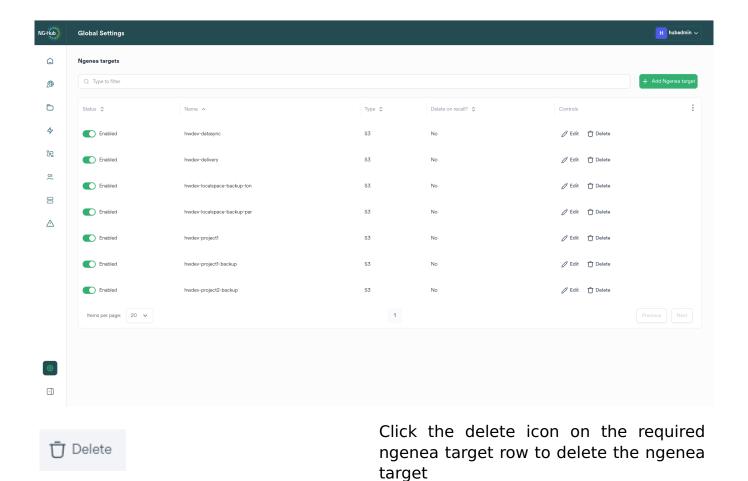

• Modify the ngenea target settings as required. Refer to Adding a Ngenea Target for settings guidance.

# Deleting an Ngenea Target

Important: This function can only be performed by a Hub Administrator.

Clicking the global settings button in the main menu bar displays the list of ngenea targets:

A confirmation dialog is raised:

- Click Yes to delete the ngenea target. This action is irreversable.
- Alternately click no, or close the confirmation dialog.

# **Backups**

pixstor provides the capability to backup data within a Space on a per-Site basis to specific Ngenea Targets.

Hub enables configuration to be set for the Ngenea Backup service running on pixstor sites.

**Important:** Best practice is to treat backup data separately from live data. Hub will only configure a backup to an Ngenea target set as a backup-only target type.

## Configuring Backups

To perform a backup for a Space on a Site, the following actions must be undertaken:

- An Ngenea Target is provisioned with Backup-Only enabled
- The Site from which to backup is enabled to participate in backups
- An appropriate backup schedule is set
- The Space is enabled for backup, selecting the Site and the Ngenea Target

## Backup Only Ngenea Targets

An Ngenea Target can be utilised for backups of a Space.

Where a Space exists across multiple Sites, optionally, each site can perform its own backup of the Space.

Multiple Sites are not permitted to backup to the same Ngenea Target.

### **Backup-only target**

Whether this target is for backups

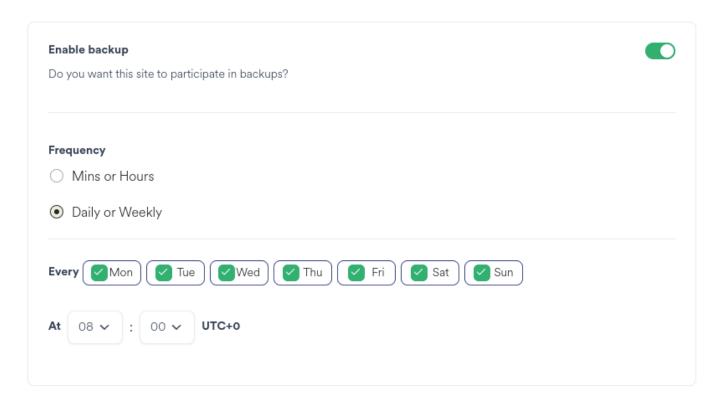

## **Enabling Site for Backup**

pixstor provides the capability to backup data within a Space on a per-Site basis to specific Ngenea Targets.

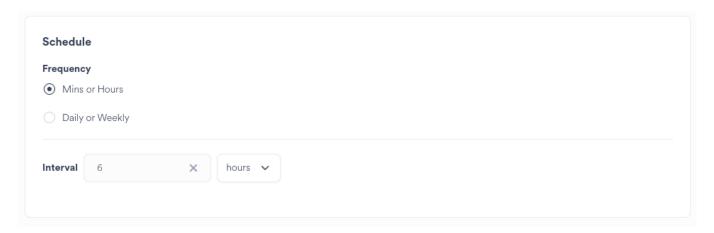

Hub enables configuration to be set for the Ngenea Backup service running on pixstor sites.

If the Site is enabled to participate in backups, each Space requires additional configuration to enable the per-Space backup.

### Backup

Determine the required frequency of the backup.

Choosing Mins or Hours will ensure that the schedule will run on the next interval set.

E.G: \* 1 hour: The backup will run on the next hour (12.00, 13.00) \* 15 mins: The backup will run on the next 15 minute interval past the hour (15, 30, 45, 00)

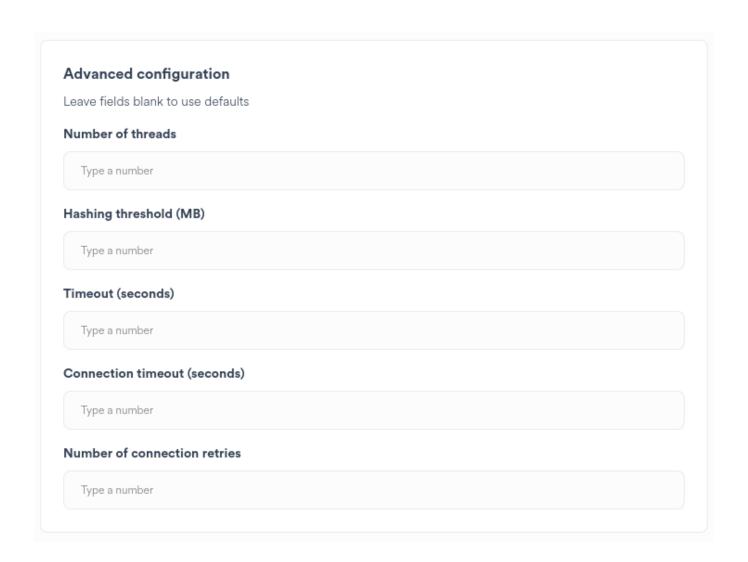

Schedu	
Frequenc	
O Mins	or Hours
<ul><li>Daily</li></ul>	or Weekly
Every	Mon Tue Wed Thu Fri Sat Sun
,,,,	
At   12 ·	: 05 V UTC+0

Choosing Daily or Weekly allows the backup to be scheduled once per chosen day at a specific time of day.

**Hint:** The schedule time is in UTC+0. You may need to account for any timezone offset of the site when scheduling.

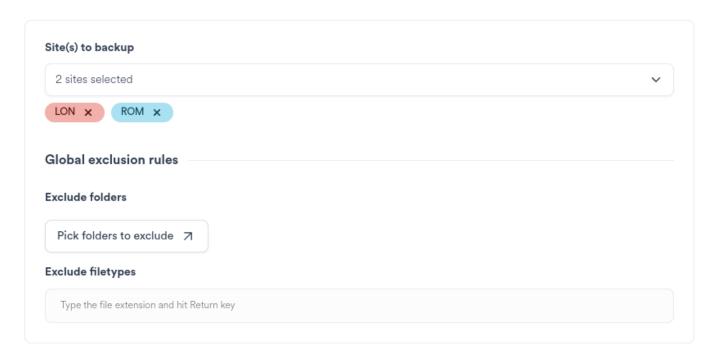

Optional tuning can be set for the backup operation in the Advanced Configuration.

Refer to the Ngenea Backup documention prior to applying any parameters.

# **Enabling Space Backup**

## Space backup

- Select the Sites which will perform backups for this space
- Define any Global Exclusions

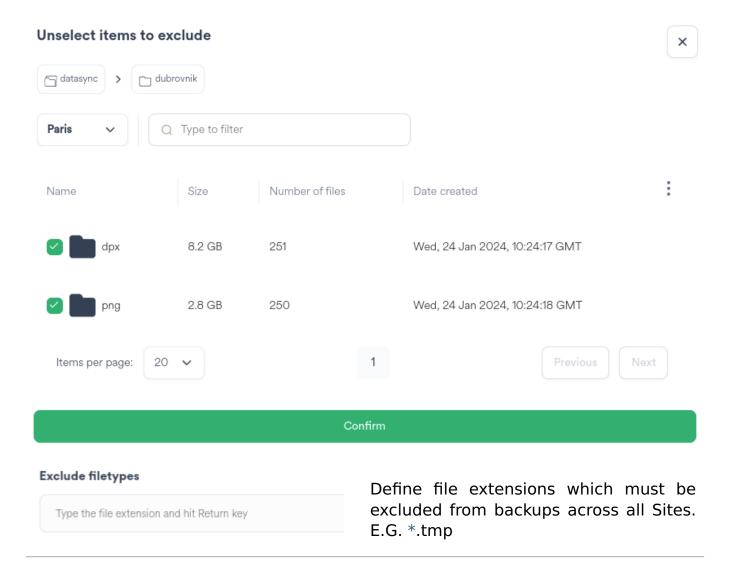

### Global Exclusion Rules

Global exclusions apply to all Site backup configurations for the Space unless overridden on a per-Site basis.

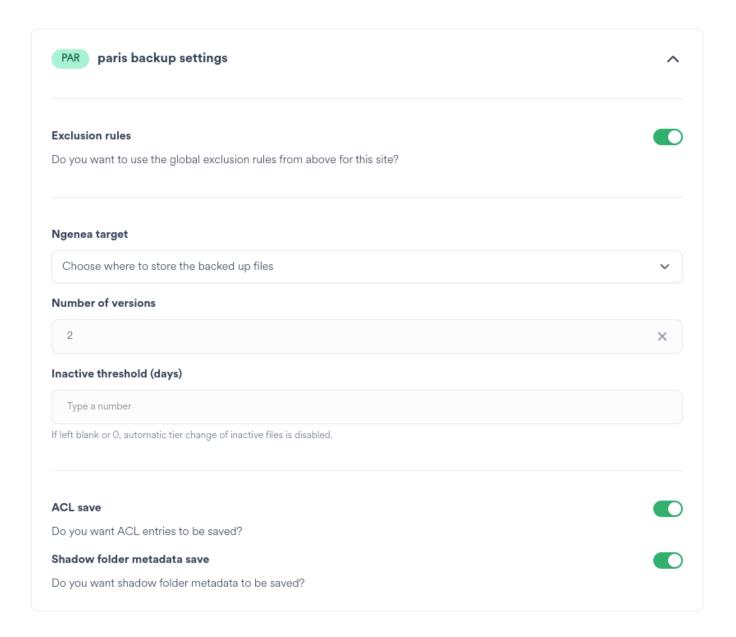

Click the Pick folders to exclude button to raise the folder browser dialog

Use the folder browser to unselect items which will not be included (hence excluded) from backups.

**Hint:** If multiple Sites are selected, backup configuration is presented per-Site. Optionally each site can specify its own settings.

For each Site participating in Space backup a configuration panel is displayed:

# Review the backup settings for each site:

Setting	Description
Exclusion Rules	By default the Site inherits the Global exclusion rules. To override the rules, deselect the slider and define any exclusions using the same methods as described above.
Ngenea Target	Choose an available Ngenea Target. Only targets configured as Backup-Only target and not currently in use for other Sites are available for selection.
Number of versions	Defines the maximum number of all file versions within a remote storage location for the targeted Fileset before Ngenea Backup prunes excess versions. If the number of versions of a file has exceeds the defined threshold, the oldest version will be deleted.

Inactive threshold(days)

Setting	Description
	Defines the threshold of days for a defined CRITERIA (E.G.: modification) after which each file within the monitored Independent Fileset is validated when INACTIVE_THRESHOLD is enabled. Those files where their defined CRITERIA exceeds this value will be re-copied from the local PixStor filesystem to storage container into an in-active tier. All instances of the file in typical standard storage classes are transitioned to older file versions.
ACL save	If enabled, all of the related NSFv4 ACL entries for an ingested file will be included in the remote object's metadata when a file is backed up. This allows Ngenea to apply those NSFv4 ACL entries when recalled or stubbed.
Shadow folder metdata save	If enabled, additional data objects will be created within the remote storage target as this data is stored as an object within the cloud provider. If enabled, all the directory modification, creation and deletion operations between subsequent backup runs will be stored in remote storage. This allows the restoration or ngrecall of directories with NFSv4 ACL and POSIX permission support. This data will also be version controlled similarly to files. This operation will occur if the permissions or ACL entries are edited on any directories meaning that each change to ACLs will be updated with regular runs of backup.

# Administration Guide

Ngenea Hub harnesses the power of Ngenea to provide global workflows, enabling your data to be where you need it, when you need it.

# Installation

## **Notice**

Hub versions 1.18+ have additional requirements

If an upgrade is being performed from a version < 1.18 please note changes in the Installation and Upgrade guides

A deployment of Ngenea Hub comprises two main components:

- Ngenea Hub the central management point, from which all tasks are managed
- Ngenea Worker worker agents, installed on individual Ngenea servers, that execute the Ngenea tasks

Ngenea Worker are installed on one or more nodes in a Site, which typically represents a single Ngenea cluster or location.

Ngenea Hub needs to be accessible from all Ngenea Workers on the following ports:

- 6379/tcp
- 5672/tcp
- 8000/tcp

8000/tcp is required for Hub versions >= 1.18

## Installing Ngenea Hub

Ngenea Hub can be installed in a number of ways, use one of the methods described below.

### CentOS / Redhat - Online Installation

Configure Docker Authentication

**Note:** This step is not required on PixStor systems

Configure Docker authentication for eurepo.arcapix.com.

docker login eurepo.arcapix.com

Installing Ngenea Hub

Transfer the ngenea-hub rpm to the target system.

Install the ngenea-hub package via yum.

yum install ngenea-hub-<version>.rpm

Optionally, create an initial Ngenea Hub configuration file at /etc/sysconfig/ngeneahub. This file contains the credentials which will be required for deploying workers, and can also be edited to use external queue systems prior to starting the Ngenea Hub service. This file will be created automatically if it does not exist when the service is started.

ngeneahubctl createconfig

Enable and start the Ngenea Hub service.

systemctl enable --now ngeneahub

Enable and start the Ngenea Hub frontend service.

systemctl enable --now ngeneahub-frontend

Check the status of the service with:

ngeneahubctl status systemctl status ngeneahub-frontend

### CentOS / Redhat - Offline installation

The ngeneahub service will attempt to pull the required docker images from the Ngenea software repository servers. In situations where this is not possible (due to network restrictions, for instance), the containers can be installed via additional RPM: ngenea-hub-images, available at the same location as the main RPM.

Once the RPMs are transferred to the target system, they can be installed using rpm.

rpm -ivh ngenea-hub-<rpm ngenea-hub-images-<version>.rpm

## Cloud Deployment

Coming soon: image-based deployment of Ngenea Hub in the cloud.

## Container Native Deployment

It is possible to deploy Ngenea Hub using standard container management tools and processes.

Please contact us to discuss.

## Ngenea Worker

**Pre-requisite:** Ngenea Server software installed and configured

**Pre-requisite:** File systems accessible on nodes where ngenea-worker is installed are configured with auto-inode-limit.

This can be achieved via: mmchfs <file system name> --auto-inode-limit

Install the ngenea-worker package via rpm.

yum install ngenea-worker

Add the appropriate worker configuration.

```
Note: The following section is new for version 1.18+
```

Run the join command to ensure TLS communications. Provide the username and password of a registered hub admin user to successfully authenticate. Refer to Hub Initial Configuration to add a hub admin user.

```
ngenea-worker join --user <USERNAME>
```

Example of ngenea-worker join with worker configuration option api\_secure=false:

```
root@myserver:/root ngenea-worker join --user hubadmin hubadmin's password:
Attempting to auth the hub using the provided credentials...
Authenticated as user onprem-worker.
Storing the client certificates for the worker...
Client certificate stored at /etc/pki/tls/certs/onprem.crt
Client private key stored at /etc/pki/tls/private/onprem.key
Storing the root CA for NgeneaHub...
Root CA stored at /etc/pki/tls/certs/ng-hub-ca.crt
```

Enable and start the ngenea-worker systemd unit.

```
systemctl enable --now ngenea-worker
```

# Product Interoperability Matrix

Ngenea Hub requires specific versions of Ngenea.

- All Ngenea Hub managed sites must use the same version of Ngenea
- Mixed versions are unsupported

### Ngenea

The following table defines the supported Ngenea versions for each version of Ngenea Hub.

Ngenea Hub version	Ngenea version	minimum Ngenea maxim version	um
2.2.1	1.28.0	1.28.0	
2.2	1.28.0	1.28.0	
2.1	1.27.0	1.27.0	
2.0.2	1.25.0	1.25.0	
1.30.0	1.27.0	1.27.0	
1.29.0	1.27.0	1.27.0	
1.28.0	1.26.1	1.26.1	
1.27.0	1.25.0	1.25.0	

Ngenea Hub version	Ngenea version	_	genea ersion	maximum
1.26.0	1.24.1	1.2	24.1	
1.25.0	1.24.1	1.2	24.1	
1.24.0	1.21.0	1.2	22.0	
1.23.0	1.21.0	1.2	22.0	
1.22.0	1.21.0	1.2	22.0	
1.21.0	1.21.0	1.2	21.0	
1.20.0	1.21.0	1.2	21.0	
1.19.0	1.21.0	1.2	21.0	
1.17.3	1.20.1	1.2	20.1	
1.17.0	1.19.0	1.3	19.0	
1.13.0-1.16.0	1.16.0	1.3	19.0	
1.10.0-1.12.0	1.15.0	1.3	16.0	
1.9.0	1.14.0	1.3	14.0	
1.8.0	1.13.0	1.3	14.0	
1.7.0	1.12.0	1.3	12.0	
1.6.0	1.12.0	1.3	12.0	
1.5.0	1.12.0	1.3	12.0	
<=0.6.0	1.9.0	1.3	11.0	

#### **Event Based Orchestration**

The following table defines the supported Event Based Orchestration versions for each version of Ngenea Hub.

Ngenea Hub version	<b>Event Based Orchestration version</b>
1.30.0	1.0.0

Once installed, additional features such as Search may be set up as described in Feature Set-up

Ngenea Hub software must align with Ngenea software. Ensure to review the Product Interoperability Matrix and align software versions accordingly.

# Upgrade

**Note:** Hub versions 1.18+ have additional requirements

If an upgrade is being performed from a version < 1.18 please note changes in the Installation and Upgrade guides

Ensure to review the Product Interoperability Matrix and align software versions accordingly.

## Before you start

Before upgrading, you must wait for any pending or active jobs to complete, otherwise they may be lost or present an incorrect future state.

Scheduled workflows must be temporarily disabled prior to upgrading to prevent new jobs being submitted during the upgrade process.

# **Backup Workflows**

Ngenea Hub ships with some default workflows. New releases may make changes to these workflows, so any customisations to them may be lost during upgrade. For safety, workflows should be backed-up before upgrading.

The easiest way to backup workflows is using ngclient

```
ngclient workflows list > workflows backup.json
```

See NGCLIENT-WORKFLOWS for more information.

## **Stop Services**

**Note:** Hub versions 2.1+ have additional requirements

When upgrading Hub 2.1+, the additional service ngenea-worker-frontend is required to be actioned

First, shutdown Ngenea Worker on all nodes

```
systemctl stop ngenea-worker
```

Note that any Ngenea Worker packages pre-1.12.0 will use the older syntax:

```
systemctl stop ngenea-worker@SITENAME
```

Then shutdown Ngenea Hub

```
systemctl stop ngeneahub
systemctl stop ngeneahub-frontend
```

**Warning:** Not stopping the workers before upgrading may result in jobs being stuck as **PENDING**. If this happens, restarting the workers using **systemctl** restart ngenea-worker will allow jobs to start running again.

# **Upgrade Packages**

Download the latest RPMs from the Download page.

Upgrade Ngenea Hub

```
yum upgrade ngenea-hub-<version>.rpm
```

As with Installation, for offline situations, the Ngenea Hub base and image rpms can be upgraded with

```
rpm -Uvh ngenea-hub-rpm ngenea-hub-images-rpm ngenea-hub-images-
```

Upgrade Ngenea Worker on all nodes

```
yum upgrade ngenea-worker-<version>.rpm
```

# **Upgrade Configurations**

**Warning:** If upgrading from Ngenea Hub version 1.17 or older, you must convert worker configuration to 1.18+ format. Please refer to the appropriate worker configuration and worker join steps as described in Ngenea Worker. Installation of the worker is not required as this has been achieved in the prior Upgrade Packages step.

### **Restart Services**

First, startup Ngenea Hub

```
systemctl start ngeneahub
systemctl start ngeneahub-frontend
```

Then start Ngenea Worker on all nodes

```
systemctl start ngenea-worker
```

If any scheduled workflows were disabled, they can now safely be re-enabled.

### **Validation**

Check the status of the Ngenea Hub service with:

```
ngeneahubctl status
systemctl status ngeneahub-frontend
```

Check the status of Ngenea Worker service with

```
systemctl status ngenea-worker
```

# **Restoring Workflows**

Check the workflows post-update. If there are any issue or inconsistencies with the upgraded workflows, they can be restored from the backup created pre-upgrade. This is also done using ngclient.

Any workflow which is missing can be re-imported using

```
ngclient workflows import <workflow file>
```

Any workflow which has changed can be restored using

```
ngclient workflows update <id> <workflow file>
```

Note, ngclient only allows importing or updating single workflows at a time. The workflow\_file passed to the above commands must only contain a single workflow definition.

# Configuration

# **Hub Initial Configuration**

Once all services are up, create an admin user with:

## ngeneahubctl adduser

Register an initial site (replacing SITENAME) (see Worker Installation for enabling a site's worker agents).

## ngeneahubctl addsite SITENAME

Log into the UI at http://server.address:8000.

## **Hub Configuration**

## Settings

The main configuration file for Ngenea Hub is at /etc/sysconfig/ngeneahub. This is an environment file which holds the information required for connecting to the various backend services.

## **Mandatory Settings**

Setting	Description
DJANGO_SECRET	Secret string used secure signed data within django
POSTGRES_DB	Internal database name
POSTGRES_USER	Internal database username
POSTGRES_PASSWORD	Internal database password

## Optional settings

Setting	Description
REDIS_HOST	

Setting	Description
	Address of the Redis queue results store. Defaults to the container service address.
WORKERS	The number of gunicorn workers to spawn for serving API requests. Default to 8.
CONSUMER_TIMEOUT	The timeout for rabbitmq consumer delivery acknowledgement in seconds.  Default: 10800000 (3 hours)
HUB_PORT	User configurable hub port
WEB_BIND_IP	User configurable web bind IP
PUBLIC_URL	User configurable base url for the hub stack to be served from, must not end in a trailing slash.
WORKER_THREADS	The default number of celery concurrency threads to deal with multiple queued tasks for all celery based containers. This can be overwritten by container specific settings. Defaults to 2.
CELERY_THREADS	The number of main celery container concurrency threads to deal with multiple queued internal tasks. More threads means that more internal tasks and system tasks can run in parallel.
DAG_THREADS	The number of celery-dag container concurrency threads to deal with multiple queued DAG based tasks. Defaults to 7. More threads result in faster task resolutions for all job types and more frequent job updates.
EVENT_THREADS	The number of celery-events container concurrency threads to deal with multiple queued event reporting tasks. More threads ensure that snapdiff events can be reported to the hub faster.
RESULT_THREADS	The number of celery-results container concurrency threads to deal with multiple queued result reporting tasks. More threads mean streamed task results can report the the hub faster.

Setting	Description
	(bool) Key for Disabling/Enabling celery heartbeats, default: true (enabled)
GOSSIP	(bool) Key for Disabling/Enabling celery gossip, default: false (disabled)
MINGLE	(bool) Key for Disabling/Enabling celery mingle, default: false (disabled)
REDIS_HEALTH_CHECK_INTERVAL	(int) The Redis backend supports health checks. This value must be set as an integer whose value is the number of seconds between health checks. default: 60
REDIS_TCP_BACKLOG	(int) In high requests-per-second environments you need a high backlog in order to avoid slow client connections issues to redis. Default: 511
REDIS_SOCKET_TIMEOUT	(int) When there are network issues redis backend connection sockets can become stale, this timeout setting will reset the socket connection after this value in seconds after becoming idle and resume operation. Default: 60
CELERY_SOCKET_TIMEOUT	(int) When there are network issues redis broker sockets can become stale, this timeout setting will re-acquire the socket after becoming idle for this value in seconds and resume operation. Default: 60
CELERY_CONNECTION_TIMEOUT	(int) When there are network issues redis broker connection via the acquired sockets can become stale, this timeout setting will reset the connection after becoming idle for this value in seconds and resume operation. Default: 60

Setting	Description
EXPIRE_OLD_JOBS_INTERVAL	(cron) schedule for when old job expiration will be run. When the task runs, jobs older than the configured jobs_ttl will be expired. Default: 0 0 * * * (minutes can be random from 0-59)
REMOVE_OLD_SEARCH_RESULTS_INTERVAL	(cron) schedule for when search result removal will run. When the task runs, search results older than the configured search_result_ttl will be expired. Default: 0 0 * * * (minutes can be random from 0-59)
INVALIDATE_CANCELLED_JOB_TASKS_INTERVAL	(cron) schedule for when cancelled jobs are revoked. When the task runs, any tasks still active in a cancelled job will be automatically cancelled. Default: 0 * * * * (minutes can be random from 0-59)
CLEANUP_OLD_EVENTS_INTERVAL	(cron) schedule for when old snapdiff events will be cleaned up. When the task runs, events for all but the 2 most recent completed snapdiff jobs per workflow will be deleted. Default: 0 * * * * (minutes can be random from 0-59)
INACTIVE_TASKS_INTERVAL	(cron) schedule for when inactive tasks will be invalidated. When the task runs, any STARTED task which is not actually running in a worker will be marked as FAILED. Default: 0 * * * * (minutes can be random from 0-59)
SYNC_SITE_SETTINGS_INTERVAL	(cron) schedule for when sync of the site settings will be run. When the task runs, the site settings will be created or updated in the DB. Default: 0 * * * * (minutes can be random from 0-59)
SYNC_GLOBAL_SETTINGS_INTERVAL	(cron) schedule for when sync of the global settings will be run. When the task runs, the global settings will be sent to sites to be in sync. Default: 0 * * * * (minutes can be random from 0-59)

REFRESH\_SITE\_ANALYTICS\_INTERVAL

Setting	Description
	(cron) schedule for when refresh of the site analytics will be run. When the task runs, refresh of site analytics will be triggered. Default: 37 */12 * * *
SYNC_STORAGE_POOLS_INTERVAL	(cron) schedule for when sync of the storage pools will be run. When the task runs, storage pools will be synced. Default: */30 * * * *
SYNC_REMOTE_SERVERS_INTERVAL	(cron) schedule for when sync of the remote servers will be run. When the task runs, remote servers will be synced. Default: 0 0 * * * (minutes can be random from 0-59)
SYNC_SPACES_QUOTA_INTERVAL	(cron) schedule for when sync of the spaces' quotas will be run. When the task runs, spaces' quotas will be synced. Default: */ 30 * * * *
SYNC_SPACES_INTERVAL	(cron) schedule for when sync of spaces will be run. When the task runs, spaces will be synced. Default: 0 * * * * (minutes can be random from 0-59)
SYNC_ALERTS_INTERVAL	(cron) schedule for when sync of alerts will be run. When the task runs, alerts will be fetched from all sites. Default: * * * *

# Enabling LDAP/Active Directory Authentication

To enable LDAP/Active Directory Authentication, provide the following settings in the /etc/sysconfig/ngeneahub configuration file.

Setting	Description					
LDAP_ENABLED	(bool) Key for Disabling/Enabling LDAP/Active Direct Authentication. default: false (disabled)					
LDAP_HOSTNAME	The hostname of the LDAP/AD server					
LDAP_USERNAME	The username to use for the LDAP/AD bind					
LDAP_PASSWORD	The LDAP/AD bind password					
LDAP_USER_SEARCH	An LDAPSearch object that identifies the set of relevant user object.G. cn=Users,dc=MYDOMAIN,dc=MYCOMPANY,dc=COM					
LDAP_GROUP_SEARCH	An LDAPSearch object that identifies the set of relevant group ob E.G. ou=Security,ou=OurGroups,dc=MYCOMAIN,dc=MYCOMPANY,dc=					
	ou-security, ou-our Groups, uc-MTCOMAIN, uc-MTCOMFAINT, uc-					

Setting	Description
LDAP MIRROR GROUPS	(bool) If AUTH_LDAP_MIRROR_GROUPS is True, then every time a logs in, LDAPBackend will update the database with the user's L
	groups. default: false (disabled)

### Server Configurations

Some settings are stored in the Ngenea Hub DB.

They can be viewed and changed via the REST API /api/configurations/ endpoint.

See Configuration for more details.

# Docker Compose configuration

The docker-compose file is stored in /usr/share/ngeneahub/docker/docker-compose.yml.

This can be extended by creating an override file at /usr/share/ngeneahub/docker/docker-compose.override.yml.

# Worker Configuration

**Note:** This configuration is new for versions 1.18+. Best practice is to backup any pre-1.18 worker configuration prior to conversion to the 1.18+ format.

The Ngenea Worker configuration should be added to /etc/ngenea/ngenea-worker.conf. The configuration is in ini format. For example:

```
[settings]
site = site1
api_host = localhost
api_port = 8000
api_secure = true
redis_port = 6379
gpfs_nodes = ["localhost"]
```

**Note:** api\_secure=true requires a valid SSL certificate and is not compatible with self-signed SSL certificates.

ngenea-worker defaults to api\_secure=true if the api\_secure setting is not specified.

Refer to: External SSL for provisioning SSL certificates

Alternately, specify api\_secure=false to disable use of SSL.

The following is a list of available settings:

Option	Type Default Re		Required	Description				
site	string		Yes	The name of the queue to listen to				
api_host	string		Yes	The base url for Ngenea Hub, this will be the url without the https protocol or port.				
api_port	string		Yes	The port that the Ngenea Hub is being hosted on, by default within Ngenea Hub it is 8000.				
api_secure	string		No	If the API is behind a secure HTTPS connection, by default this is true. Refer to: External SSL for provisioning SSL certificates if api_secure=true.				
api_secure_verify	string		No	If the API requests should verify certificates, by default this is true.				
threads	int	10	No	The number of concurrent tasks that can be run.				
heartbeat	bool	true	No	Key for Disabling/ Enabling celery heartbeats, by default Enabled.				
gossip	bool	false	No	Key for Disabling/ Enabling celery gossip, by default Disabled.				
mingle	bool	false	No	Key for Disabling/ Enabling celery mingle, by default Disabled.				
redis_health_check_interval	int	60	No	The Redis backend supports health checks. This value must be set as an integer whose value is the number of seconds between health checks.				
redis_socket_timeout	int	60	No	The Redis results backend supports a socket connection timeout, this value must				

Option	Туре	Default	Required	Description
				be set as an integer whose value is the number of seconds.
celery_socket_timeout	int	60	No	The Redis celery broker supports a socket timeout, this value must be set as an integer whose value is the number of seconds.
celery_connection_timeout	int	60	No	The Redis celery broker supports a socket connection timeout, this value must be set as an integer whose value is the number of seconds.
gpfs_nodes	list		No	A list of nodes to run the snapdiff policy scan on as a list of hostnames
enable_plugins	bool	false	No	Key for Disabling/ Enabling worker plugin behaviour (currently in alpha), by default Disabled.
loglevel	str	INFO	No	Key for setting the worker loglevel (more specific to worker main process). valid choices are INFO, DEBUG, WARNING, CRITICAL, ERROR (by default INFO).

**Note:** The initial access credentials can be found in the /etc/sysconfig/ ngeneahub configuration file on the Ngenea Hub server. By default, the BROKER\_PA SSWORD is used for both the broker\_url and the result\_backend passwords, and the BROKER USER is used for the broker url username.

# Passing Custom Config File to Ngenea Worker

The custom config file will be present in /etc/ngenea/ngenea\_config\_arg.conf file to run the systemd services. The format of the file is given below.

# CONFIG=/etc/ngenea/ngenea-worker-custom.conf

**Note:** By default, this file will have the CONFIG commented to allow the default config to pass through if custom config file is not specified.

Uncomment the CONFIG in /etc/ngenea/ngenea\_config\_arg.conf file. Create a new worker config file (as ngenea-worker.conf) with different site name. Also site should be added to hub and worker using the commands listed below.

```
ngeneahubctl addsite <sitename>
ngenea-worker join --user <username> --site <sitename>
```

To Run ngenea-worker with multiple sites

To run services with two sites,

- 1. Create new service file same as /usr/lib/systemd/system/ngenea-worker.service with different filename (Eg: ngenea-worker-site1.service).
- 2. Create new custom config file same as /etc/ngenea/ngenea\_config\_arg.conf with different filename (Eg: ngenea\_config\_arg1.conf).
- 3. Create new worker config file same as /etc/ngenea/ngenea-worker.conf with different filename and give the filename in ngenea config argl.conf.
- 4. In ngenea-worker-site1.service, change the value of EnvironmentFile=... to new custom config file created (Eg: EnvironmentFile=/etc/ngenea/ngenea config arg1.conf).
- 5. Now run systemctl start ngenea-worker.service and systemctl start ngenea-worker-sitel.service.

# Setting Ngenea Worker debug level in systemd service script

In /usr/lib/systemd/system/ngenea-worker.service file, set the value of Environment=DYNAMO\_DEBUG=.. to true as below. It will be false by default. This debug level is more specific to tasks logging.

Environment=DYNAMO DEBUG=true

# Feature Set-up

To use certain features in Ngenea Hub, additional set-up is required as described in this section.

#### Search

The search feature provides the ability to search for files across one or more sites.

This page describes the steps required to set up the search feature.

For information on how to use the search feature, see Search

# **Prerequisites**

The search feature is only supported on workers running on a PixStor.

There are two backends which can provide search functionality to Ngenea Hub: **PixStor Search** and **PixStor Analytics**.

This document assumes that the desired backend has already been deployed, as described in the PixStor deployment guide. Be aware that neither backend will have been deployed by default.

# Configuration

#### Search Backend

By default, Ngenea Hub will use the Analytics backend. If you want to use the PixStor Search backend instead, change the search\_backend to pixstor\_search, as described in Global Configurations

```
$ curl -s -X PATCH 'http://example.com/api/configurations/' -H
'Accept: application/json' -H "Authorization: Bearer
$JWT_ACCESS_TOKEN" -H 'Content-Type: application/json' -d
'{"search_backend": "pixstor_search"}'
```

All sites **must** use the same backend - all analytics or all PixStor Search.

#### Elasticsearch URL

If you are using the Analytics backend and the worker is running on **PixStor 6**, you will need to change the elasticsearch\_url for the site to http://localhost:19200, as described in Site-specific Configurations

```
$ curl -s -X PATCH 'http://example.com/api/sites/1/' -H 'Accept:
application/json' -H "Authorization: Api-Key $APIKEY" -H 'Content-
Type: application/json' -d '{"elasticsearch_url": "localhost:19200"}'
```

If not set, the elasticsearch\_url will default to localhost:9200, which is correct for workers running on PixStor 5.

Different sites may configure a different elasticsearch\_url, for example if one is PixStor 5 and another is PixStor 6.

#### Search UI

Once configured, search can be used via the REST API as described in Search

To use search via the Ngenea Hub UI, you must first enable the searchui feature flag, as described in Feature Flags

For example, using ngclient

```
ngclient features enable searchui
```

### **Cloud Functions**

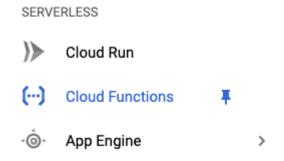

Cloud to Hub is a function intended to be running in the cloud. It runs in response to cloud storage events, triggering a job in Ngenea Hub to reflect the change onto another system (e.g. PixStor). This allows for keeping multiple systems in sync, using cloud storage as the source of truth.

The code is designed to work with any of the supported platforms (see above), and any event (create, delete, ...) with only changes to the config.json file, as described below.

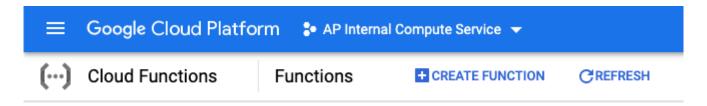

Currently supports:

#### **GCP Cloud Function**

In the GCP console menu under Serverless, select Cloud Functions

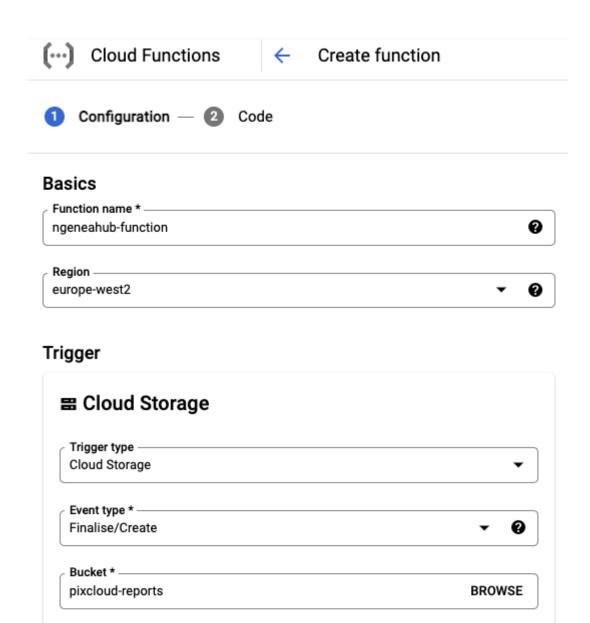

#### Choose Create Function

# In the first Configuration page:

- 1. Give the function a name
- 2. Select a region to run from. Usually best to be in the same region as the bucket we'll be using
- 3. Under trigger select **Cloud Storage** type
- 4. And **Finalise/Create** for the event type
- 5. Select the bucket to monitor

#### Then press **Save**

Retry on failure ②

CANCEL

SAVE

If you wish to create a new service account for this function, use the following gcloud command to create a new service account and assign it the role storage.objectViewer

```
PROJECT_ID='GCP-PROJECT-1'
SERVICE_ACCOUNT_ID='ngeneahub-function'
ROLE_NAME='roles/storage.objectViewer'

gcloud iam service-accounts create $SERVICE_ACCOUNT_ID \
    --description='A service account to give the {{ brand_name }} 
function read access to GCS buckets' \
    --display-name=$SERVICE_ACCOUNT_ID

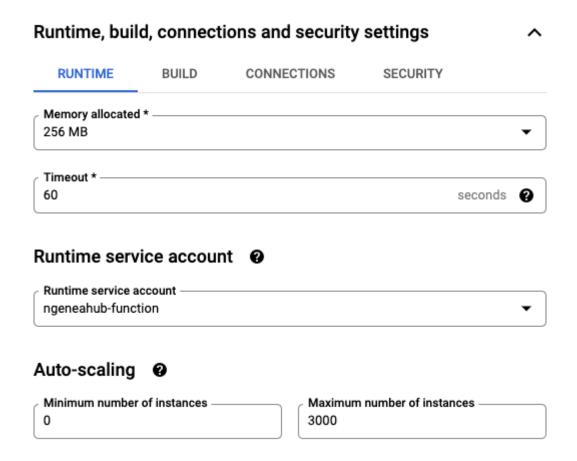

gcloud projects add-iam-policy-binding $PROJECT_ID \
    --member="serviceAccount:
```

# Open up the RUNTIME, BUILD AND CONNECTIONS SETTINGS section

Under the **RUNTIME** tab at the bottom, select a **Runtime** service account that has the following permissions as a minimum (or the newly created service account from above):

storage.objectViewer

Select **Next** to continue

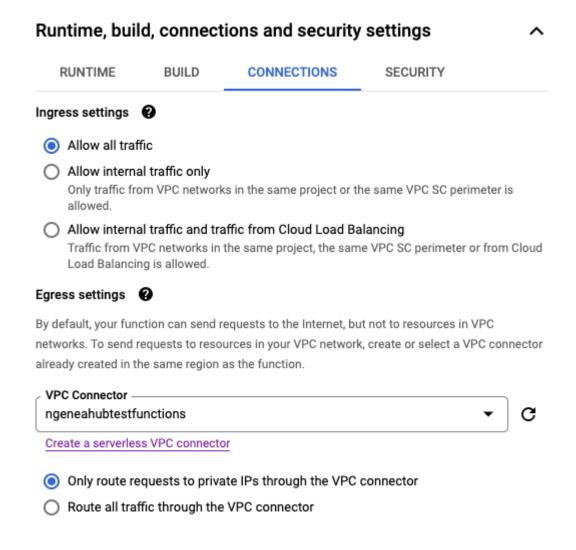

If the Ngenea Hub doesn't have an external IP to connect to, you'll need a **VPC Connector** for the function to be able to access the Ngenea Hub private IP.

The creation of the **VPC Connector** is out of scope of these docs.

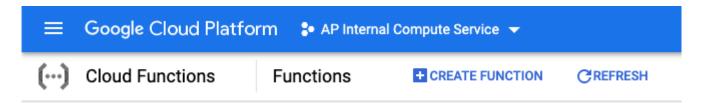

To select an existing VPC Connector, under the RUNTIME, BUILD AND CONNECTIONS SETTINGS section, select Connections.

From the VPC Connector drop down menu, select an existing connector and check the **Only route requests to private IPs through the VPC connector** radiobox.

# In the Code config section

- 1. Change the **Runtime** to **Python 3.9**
- 2. The **Entry Point** is **main**
- 3. Select **ZIP upload** in the **Source code**
- 4. Choose the GCP zip previously downloaded from the ../../download page
- 5. Select a **Stage bucket** for use while deploying. You can use the bucket we'll be monitoring
- 6. Select **Next** to build the **Cloud Function**

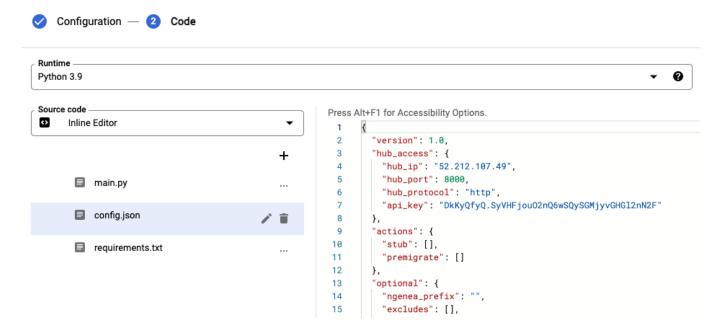

Once built you need to edit the default config. json file

Choose your new function and click **EDIT** 

Select Next to get to the code edit section

Select the config. json file to edit

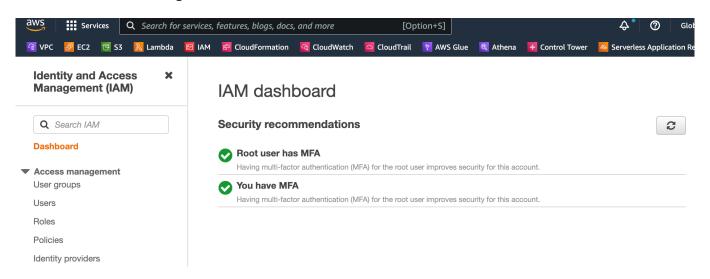

Edit the config file based on the docs from Cloud Functions

Select Deploy to save the changes. This can take 1-2 mins to update

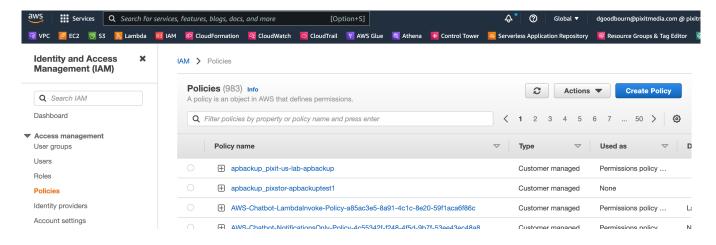

#### **AWS Lambda Function**

Create the IAM policy and role

In the AWS console go to the IAM service

Select the Policies then Create Policy

Move to the **JSON** tab and replace the text with the following:

```
{
    "Version": "2012-10-17",
    "Statement": [
        {
            "Effect": "Allow",
             "Action": "logs:CreateLogGroup",
            "Resource": "arn:aws:logs:*:<<AWS ACCOUNT ID>>:*"
        },
        {
            "Effect": "Allow",
            "Action": [
                 "logs:CreateLogStream",
                 "logs:PutLogEvents"
            ],
             "Resource": [
                 "arn:aws:logs:*:<<AWS ACCOUNT ID>>:log-group:/aws/
lambda/<<LAMBDA NAME>>:*"
             1
        },
        {
             "Effect": "Allow",
             "Action": "iam:GetUser",
             "Resource": "*"
        }
    ]
}
```

Replace << AWS\_ACCOUNT\_ID>> with your account id. This must be the Id without the - in the name, i.e. 123456789012, not 1234-5678-9012

Replace <<LAMBDA\_NAME>> with the name of your Lambda function

Select **Next** 

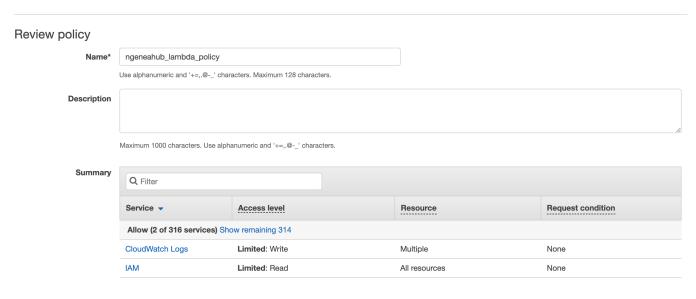

If you require a tag, add it now, otherwise just select **Review** 

Name the policy ngeneahub\_lambda\_policy

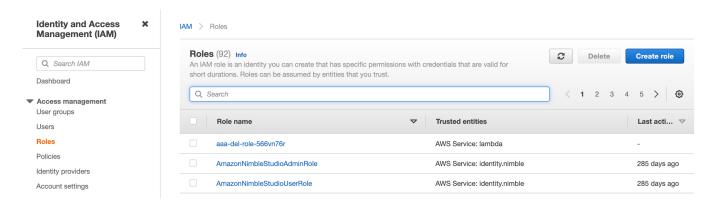

Then select Create Policy

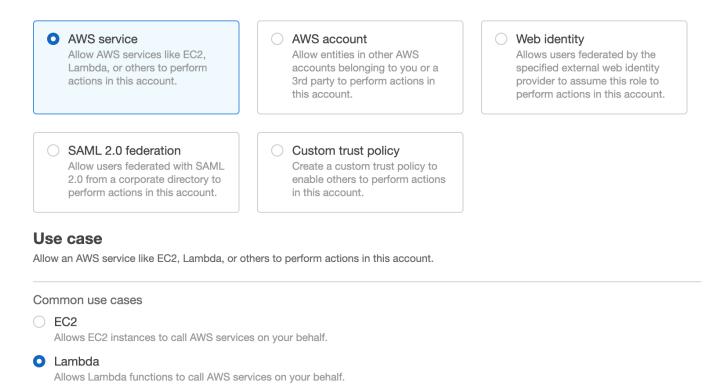

#### Next create a new Role

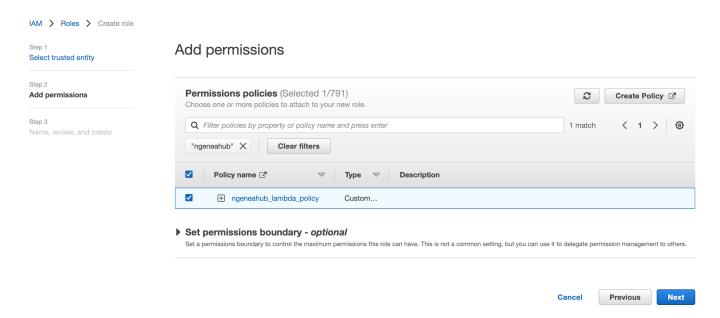

Select the AWS service for the trusted entity and a Lambda for the use case

# Select trusted entity

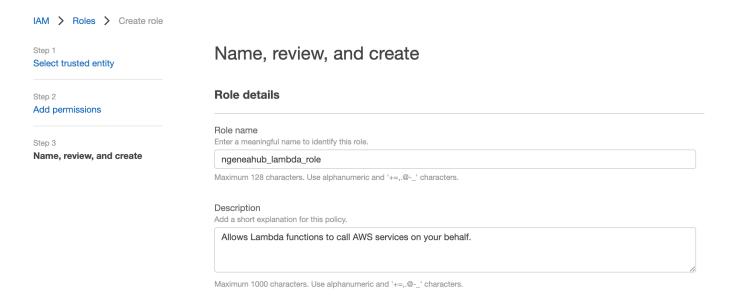

#### **Trusted entity type**

Search for the policy we just created above and select it, to attach the policy to this role. Then select **Next** 

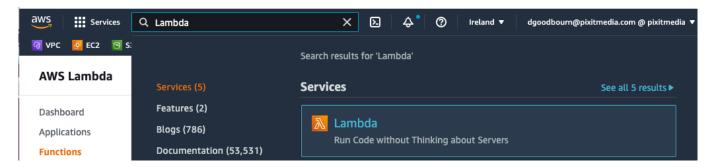

Name the role ngeneahub\_lambda\_role and select Create Role

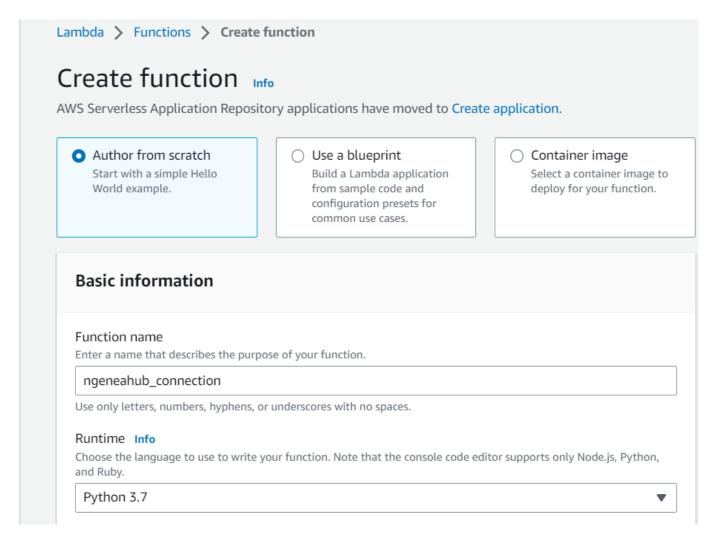

#### Create the Lambda function

In the AWS console go to the **Lambda** service

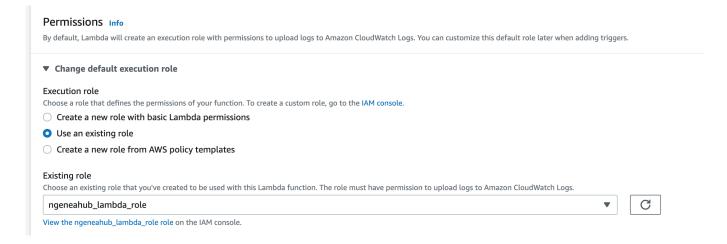

#### Click the **Create function** button

- Create a new function with the Author from scratch option selected
- · Name the function
- And select Python 3.7 from the Runtime list

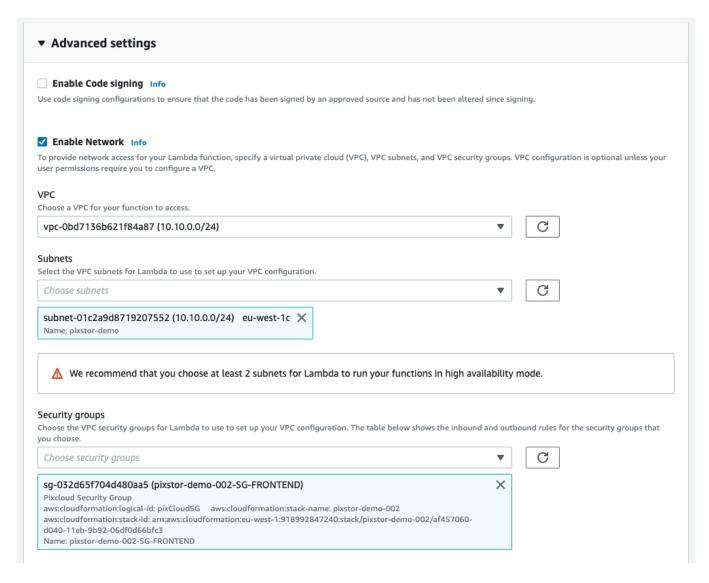

Under **Change default execution role**, select **Use an existing role** and find the role we created above

If your Ngenea Hub doesn't have an external IP to connect to, you'll need to select the **Enable Network** option under the **Advanced settings** 

- Select the VPC the Ngenea Hub is located in
- Choose the Subnet it's in
- And select a Security group that gives access to the Ngenea Hub over port 8000

A policy will also have to be created to permit the function to traverse the VPC's networking, this can be done by adjusting the previously created IAM policy:

```
{
    "Version": "2012-10-17",
    "Statement": [
            "Effect": "Allow",
            "Action": "logs:CreateLogGroup",
            "Resource": "arn:aws:logs:*:<<AWS ACCOUNT ID>>:*"
        },
            "Effect": "Allow",
            "Action": [
                "logs:CreateLogStream",
                "logs:PutLogEvents"
            "Resource": [
                "arn:aws:logs:*:<<AWS ACCOUNT ID>>:log-group:/aws/
lambda/<<LAMBDA NAME>>:*"
        },
            "Effect": "Allow",
```

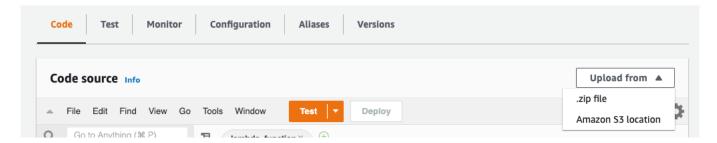

By adding this additional section, the function can traverse correctly.

With this configured, we can now create out function by selecting **Create function** 

Once the function is created - This can take a few minutes if you've chosen to create the **Network** connection.

Under the **Code** tab, you'll need to upload the zip file containing all the code

Choose the AWS zip previously downloaded from the ../../download page

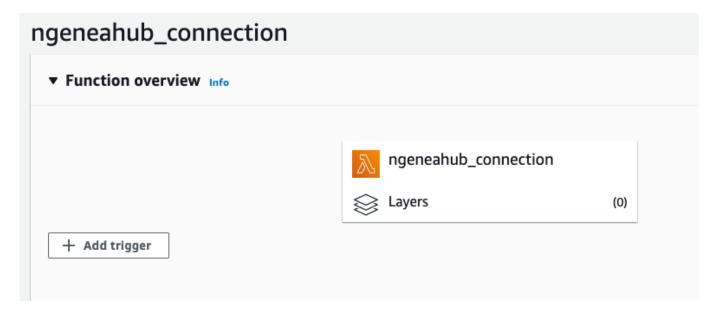

Once the code is uploaded, you need to edit the config.json file with all the relevant details based on the docs from Cloud Functions

```

```

Once you've updated the config.json file, save it by selecting the **Deploy** button

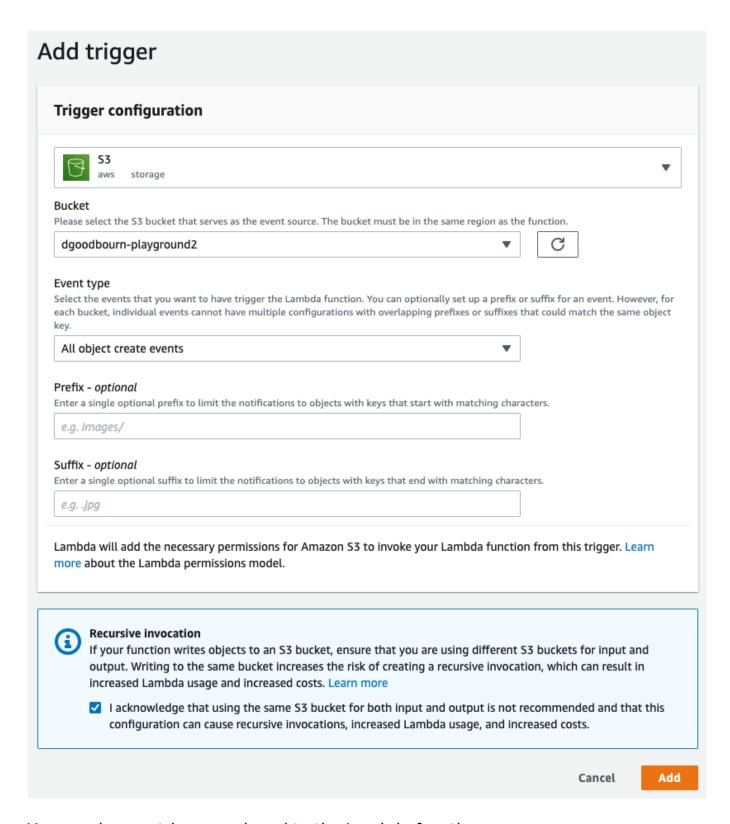

Now the Lambda function is created, we need to assign it to a bucket event. Select **Add trigger** under the **Function overview** 

#### Choose:

- S3 as the Trigger
- Select your bucket
- All object create events for the Event type
- Check the Recursive Invocation checkbox warning

Then just press **Add** 

You now have a trigger assigned to the Lambda function

To monitor the Lambda function, under the **Monitor** tab you can see all different types of monitoring

Using the **View logs in CloudWatch** is the best place to see any out from the Lambda function

### Coming soon:

Azure

### Configuration

The configuration file is in ISON format.

version

Indicates the config format version. Currently, only 1.0 is supported.

hub\_access

Defines setting for interacting with Ngenea Hub

- hub\_ip: IP addresss of the Ngenea Hub REST API to use
- hub\_port: port for the Ngenea Hub REST API, typically 8000
- hub\_protocol: either http or https
- api\_key: API 'client key' to authenticate Ngenea Hub with
- workflow: name of the workflow to submit for the event file, e.g. reverse stub
- workflow\_flags: mapping of settings to pass to the workflow, e.g. {"hydrate": true}

For new files, one would typically use **workflow** reverse\_stub or recall, which ship with Ngenea Hub by default. There is no default 'delete' workflow in Ngenea Hub, so one must be created - e.g.

```
"name": "delete_file",
  "label": "delete_file",
  "icon_classes": [
     "fa fa-cloud fa-stack-2x text-success",
     "fa fa-angle-up fa-stack-2x text-light"
],
  "discovery": null,
  "enabled": true,
  "visible": true,
  "fields": [],
  "filter_rules": [
     {
        "type": "all",
        "state": "all",
```

sites

List of sites to reflect the events to.

- site: name of the site, as registered in Ngenea Hub
- default: (optional) default mode for 'recall' type workflows. One of stub, premigrate
- **skip\_from\_ngenea**: (optional) if True then any file that was created via ngenea will be skipped for this site

**default** is used if the event path doesn't match any **action** (see below), and if hydrate isn't explicitly set in **workflow\_flags** (see above)

**skip\_from\_ngenea** is useful when e.g. Ngenea Hub is being used to sync files between sites. Files which are being transmitted via the cloud bucket don't need to be automatically recalled onto either site. On the other hand, files uploaded directly to the cloud still need to be recalled.

For GCP, we may not be able to determine the source of a delete event. In that case, deletes will always be reflected to all sites.

actions

Mapping of actions -- stub or premigrate -- to path prefixes.

This is used to determine whether a file should be hydrated by a 'recall' type workflow. If a path matches multiple actions, the longest match wins. For example, using

```
{
    "stub": ["data"],
    "premigrate": ["data/cats"]
}
```

the path data/cats/cat-01.jpg would be premigrated, while data/cats-02.jpg would be stubbed.

If not specified, the site-specific **default** (see above) will be used, unless missing or unless hydrate is explicitly set in **workflow\_flags**. If none of these settings are configured, the default behaviour is to stub.

optional

# Optional settings

- ngenea\_prefix: prefix which maps a cloud path to a local path, e.g. with prefix /mmfs1 the cloud path data/cats-01.jpg is mapped to /mfs1/data/ cats-01.jpg. Default: ''
- **excludes**: list of strings used to exclude paths. The strings are treated as substrings which can match anywhere in the (cloud) path string. Default: []
- append\_jobs: if true, tasks will be grouped under the same job id (per hour). If false, each task will get its own job. Default: false
- verbose: set logging output to info level. Default: false
- debug: set logging output to debug level. Takes precedence over verbose.
   Default: false

vendor

The vendor that the function is being run on.

Currently supported values: AWS, GCP

vendors

Vendor specific settings. Currently only used by AWS

#### **AWS**

• **ngeneabackupuser**: name of the user ngenea uses for AWS. Used to identify whether a file came from ngenea for **skip\_from\_ngenea** 

Complete Example

```
{
    "version": 1.0,
    "hub access": {
        "hub ip": "192.168.0.1",
        "hub_port": 8000,
        "hub protocol": "http",
        "api_key": "pixitmedia.123456",
        "workflow": "reverse stub",
        "workflow flags": {
            "hydrate": false,
            "overwrite": true
        }
    },
"sites": [
        {
            "site": "uk",
            "default": "stub"
        }
    ],
    "actions": {
        "stub": [],
        "premigrate": []
    "optional": {
```

```
"ngenea_prefix": "",
    "excludes": [],
    "append_jobs": true,
    "verbose": true,
    "debug": true
},
"vendor": "AWS",
"vendors": {
    "AWS": {
        "ngeneabackupuser": ""
    },
    "GCP": {},
    "Azure": {}
}
```

# Ngenea Worker Plugins

```
Warning: This feature is currently in alpha
```

When constructing workflows to run on Ngenea Hub, there may not be a task that covers the behaviour required for a given workflow. To alleviate this, there is now support for custom plugin tasks to be added to any instance of Ngenea Worker that can cover that missing behaviour.

These are defined as custom tasks for the celery https://docs.celeryq.dev/en/stable/task distribution framework.

# Creating your plugin

```
Warning: This feature is currently in alpha.
```

A plugin for the hub is a python module that contains one or multiple celery tasks that can be discovered by the Ngenea Worker, these tasks can then be used in workflows in Ngenea Hub.

Example plugin creation

Using the plugin scripts located at ngenea-worker plugins a template plugin can be created in the plugin directory at /var/lib/ngenea-worker/plugins. All plugins will persist in this location and will need to be in this directory to be correctly installed.

For the following example, we will be creating a plugin named echo\_args that will return the expected key word arguments provided to the task itself.

To begin, create a plugin template for the example echo args using:

```
ngenea-worker plugins create echo_args
```

This will create the template plugin project at /var/lib/ngenea-worker/plugins/echo\_args. To implement custom logic, navigate to /var/lib/ngenea-worker/plugins/echo\_args in which contains the python module file echo\_args/echo args.py. Within this file there is the basic example task example task:

```
@shared_task(bind=True, name="dynamo.custom.example_task")
def example_task(self, *args, paths: List = None, jobid: int = None,
**kwargs):
    print(paths)
    print(jobid)
    return {"status": "success"}
```

The logic within this task can be replaced along with the name of the function to our echo task:

**Note:** The name provided to <a href="shared\_task">shared\_task</a> will be the task name that is used to call the task within a workflow.

```
@shared_task(bind=True, name="dynamo.custom.echo_args")
def echo_args(self, *args, paths: List = None, jobid: int = None,
**kwargs):
    return {"paths": paths, "jobid": jobid, **kwargs}
```

With the new task in place, the entry point for the plugin will have to be adjusted in setup.py.

**Note:** Ensure that all custom task entry points are defined under worker\_plugin

Initial setup.py entry points:

```
"worker_plugin": [
        "echo_args=echo_args.echo_args:example_task",
]
```

In this case, the changes are as follows:

```
"worker_plugin": [
         "echo_args=echo_args.echo_args:echo_args",
]
```

### **External Dependencies**

If the logic in the plugin requires an external dependency, it can be installed into the worker using the setup.py within the template plugin generated via ngeneaworker plugins create. To add additional dependencies, they can be added to the install requires section:

**Note:** Ensure that the celery package and version is un-edited within the plugin requirements, otherwise it may have unexpected effects on the functionality of Ngenea Worker.

```
install_requires=[
    "celery>=5.0.3",
    "example-module==0.1.0"
]
```

Installing custom plugins

To install the newly created plugin refer to the plugin installation page.

# Managing plugins

**Warning:** This feature is currently in alpha.

Enabling your plugin

To enable worker plugin behaviour, the enable\_plugins setting needs to be set to true in the /etc/ngenea/ngenea-worker.conf file

```
enable plugins=true
```

By default, this setting will be false

After plugins have been created, they can be managed using the following scripts.

Installing your plugin

All the plugins that have been created within /var/lib/ngenea-/worker/plugins can be installed through running:

```
ngenea-worker plugins install
```

This will install all of the plugin packages within the plugins directory. These packages will not update within the Ngenea Worker unless it has had a version number increase in the setup.py.

Single plugins can also be installed by providing the name of the package explicitly:

```
ngenea-worker plugins install PACKAGE NAME
```

After installing the desired plugins, the Ngenea Worker service will need to be restarted:

```
systemctl restart ngenea-worker
```

Uninstalling your plugin

Uninstalling any of the plugins can be done through the uninstall script:

**Warning:** This can remove any modules within the environment that Ngenea Worker runs within, use caution when uninstalling any modules that aren't directly within /var/lib/ngenea-worker/plugins as it could cause Ngenea Worker to not function correctly.

```
ngenea-worker plugins uninstall <PACKAGE NAME>
```

To uninstall all of the modules in the plugin directory it can be done through:

```
pushd /var/lib/ngenea-worker/plugins/
ngenea-worker plugins uninstall * -y
popd
```

#### **Custom Tasks**

```
Warning: This feature is currently in alpha
```

In addition to the predefined tasks, Ngenea Worker plugins allow custom tasks to be defined.

Once created, custom tasks can be included in Custom Workflows.

Custom tasks must accept the same standard arguments, and return a payload in the same format, as predefined tasks do.

The Structure of a Task Arguments

Tasks must accept the following keyword arguments:

name	description	example	default	
jobid	ID of the job the task is associated with.	100	None	
paths	path is given as a dict with a "path" key, and can also	<pre>mmfs1/data/my- fileset/file1", " size": 264321}, { "path": "/mmfs1/ data/my-fileset/ file2", "size": 1</pre>	None	

To pass specific keyword arguments to a task, include these in the workflow definition as hardcoded values or Runtime fields.

In addition, tasks should accept arbitrary other keyword arguments via a \*\*kwargs parameter, but do not need to process them.

Here is an example function signature, from the definition of the predefined task dynamo.tasks.migrate:

```
def migrate(self, *args, jobid=None, paths=None,
skip_modified_during_migrate=False, **kwargs)
```

Return Payload

Ngenea Hub expects task results to be returned in a specific format.

There is a class FileActionStatus that the worker code uses as a convenience for constructing the return payload. This may be used as an alternative to constructing the return payload from scratch.

# Using the FileActionStatus class

The class is imported like this:

```
from arcapix.dynamo.server.status import FileActionStatus
```

A status object is instantiated like this:

```
status = FileActionStatus(taskname, input_paths, jobid, queue_name)
```

where input\_paths is the list of path objects as passed to the task in the paths parameter, and queue\_name is "<site>-custom" for worker plugins.

For each path operated on by the task, call the .add(key, path) method on the status object, where key is the state of the file:

```
status.add("processed", "/mmfs1/data/my-fileset/file1")
```

The status object keeps track of files as they are added. At the completion of the task, return the results like this:

```
return status.dump()
```

# Constructing a return payload from scratch

Tasks return a dict containing at least these 3 keys:

```
"jobid": <job_id>,
"paths": <list of path objects that were processed or skipped>,
"status": {
    "task": <task_name>,
    "input_paths": <list of path objects input to the task>,
    "input_total": <number of paths input to the task>,
    "summary": <dict giving number of files keyed by state>,
```

```
"details": <dict giving list of file objects keyed by state>,
    "started": <timezone-aware datetime for when the task
started>
    }
}
```

The paths key lists the paths to be passed to the next task in the workflow.

Here is an example payload:

```
{
    "jobid": 100,
    "paths": [{"path": "/mmfs1/data/my-fileset/file1"}],
    "status": {
        "task": "my-plugin",
        "input paths": [{"path": "/mmfs1/data/my-fileset/file1"},
{"path": "/mmfs1/data/my-fileset/file2"}],
        "input total": 2,
        "summary": {
            "failures": 1,
            "processed": 1,
            "skipped": 0
        "details": {
            "failures": [{"path": "/mmfs1/data/my-fileset/file2",
"message": ["Reason xyz for the failure"]}],
            "processed": [{"path": "/mmfs1/data/my-fileset/file1"}],
            "skipped": []
        "started": "2023-04-25T14:56:31.253043",
    }
}
```

# **Supported file states**

These are the supported file states for tasks that perform operations on files:

- "processed": file was successfully processed
- "skipped": file was not processed because they were already in the desired state
- "aborted": file was not processed and should not be processed by subsequent tasks in the workflow
- "failures": file could not be processed because of an error
- "inprogress": file is still being processed (this state is rarely used)

Generally, the files that should be passed to the next task are those that were processed or skipped.

Support for Streaming Paths from API

This applies to delete and move handlers in a snapdiff workflow.

To fetch the streaming paths, the function expand\_paths from the module arcapix.dynamo.server.utils.inputs has to be used like below.

```
from arcapix.dynamo.server.utils.inputs import expand_paths
```

**Warning:** expand\_paths provides a generator function fetching pages of paths on demand. Developers must ensure that memory starvation of Hub is negated by following the principles of generator functions thereby avoiding storing large number of values in memory concurrently.

# **Example Plugins**

```
Warning: This feature is currently in alpha
```

Here are a couple examples of functionality that can be added to the hub, these can be dropped into any template project.

Email notification task

The intent of this plugin is to email a list of staff members at the end of a workflow to ensure that they are informed of its completion, it has extra key word arguments that allow the editing of the subject:

```
import sys
from email.mime.multipart import MIMEMultipart
from email.mime.text import MIMEText
from email.utils import formatdate
from smtplib import SMTP
from typing import List
from celery import shared task
def send email(email to: List[str], email from: str, subject: str,
message: str, server: str = "localhost"):
    Sends an email through an already configured SMTP server
    :param email to: List of email recipients
    :param email from: Address that email derives from
    :param subject: Email subject
    :param message: Message to send
    :param server: Target SMTP server address
    :return: None
    smtp message = MIMEMultipart()
    smtp message['From'] = email_from
    smtp_message['To'] = ', '.join(email_to)
   smtp message['Date'] = formatdate(localtime=True)
    smtp message['Subject'] = subject
```

```
smtp message.attach(MIMEText(message))
    try:
        smtp = SMTP(server)
        smtp.sendmail(email from, email to, smtp message.as string())
        smtp.close()
    except OSError as error:
        # All SMTP errors are derived from OSError and catching all
SMTP errors from the base exception is not allowed
        print('Error sending notification email: %s', error)
@shared_task(bind=True, name="dynamo.custom.email staff")
def email staff(
    self,
    *args,
    paths: List = None,
    jobid: int = None,
    staff members: List = None,
    message: str = None,
    subject: str = None,
    server: str = None,
    from address: str = None,
    **kwargs
):
    if not message:
        message = f"Job {jobid} has completed successfully
processing {len(paths)} paths"
    if not from address:
        from address = "ngenea-worker@pixitmedia.com"
    if not subject:
        subject = "Ngenea Worker Job completed successfully"
    if not server:
        server = "localhost"
    send email(email to=staff members, email from=from address,
subject=subject, message=message, server=server)
    return {"status": "success"}
if name == " main ":
    sys.exit(0) # pragma: no cover
```

The setup.py will need editing to make the entry point the name of the function email\_staff in the module that had been created for this example plugin.

To make use of this new task in the hub, here is an example workflow that will email staff members after all the data has been migrated with a custom subject and receiving email address:

```
{
    "name": "migrate notif",
    "label": "Migrate with notif",
    "icon classes": [
        "fa fa-cloud fa-stack-2x text-primary",
        "fa fa-refresh fa-stack-1x text-light"
    ],
    "discovery": null,
    "enabled": true,
    "visible": true,
    "fields": [],
    "filter rules": [
        {
            "type": "all",
            "state": "all",
            "action": [
                 {
                     "name": "dynamo.tasks.migrate"
                 },
                 {
                     "name": "dynamo.custom.email staff",
                     "staff members": [
                         "johnsmith@organisation.com",
                         "admin@organisation.com"
                     "subject": "Project number 7 job complete",
                     "from address": "notifications@organisation.com"
                }
            ]
        }
    1
}
```

#### Running additional script

After running a set of tasks, you may need to execute a script on the host machine of the Ngenea Worker instance. The following plugin allows the execution of an arbitrary script located at /opt/cloud script.sh:

**Note:** Any script run through this plugin will be run with root access

```
import sys

from subprocess import run as run_script
from subprocess import TimeoutExpired, SubprocessError, PIPE, STDOUT

from typing import List

from celery import shared_task
```

```
DEFAULT SCRIPT = "/opt/cloud script.sh"
@shared task(bind=True, name="dynamo.custom.run cloud script")
def run cloud script(
    self,
    *args,
    paths: List = None,
    jobid: int = None,
    script location: str = None,
    timeout: int = 600,
    additional args: List = None,
    use paths: bool = False,
    **kwarqs
):
    status = {"success": False}
    try:
        args = [script location if script location else
DEFAULT SCRIPT]
        if additional args:
            args = args + additional args
        if use paths:
            # Appends the paths to the arguments
            args = args + [path["path"] for path in paths]
        result = run script(
            args,
            stdout=PIPE,
            stderr=STDOUT,
            check=True,
            timeout=timeout,
        )
        status["log"] = str(result.stdout)
        if result.returncode == 0:
            status["success"] = True
    except TimeoutExpired:
        status["log"] = "Called script timed out"
    except SubprocessError as sp err:
        status["log"] = str(sp err)
    return {"status": "success"}
if name == " main ":
    sys.exit(0) # pragma: no cover
```

The setup.py will need editing to make the entry point the name of the function run\_cloud\_script in the module that had been created for this example plugin.

To make use of this new task in the hub, here is an example workflow that will run the default cloud script after all of the data has been migrated:

```
{
    "name" "migrate cloud script",
    "label" "Migrate with notif",
    "icon classes": [
        "fa fa-cloud fa-stack-2x text-primary",
        "fa fa-refresh fa-stack-1x text-light"
    ],
    "discovery": null,
    "enabled": true,
    "visible": true,
    "fields": [],
    "filter rules": [
        {
            "type": "all"
            "state": "all",
            "action": [
                 {
                     "name": "dynamo.tasks.migrate"
                 },
                 {
                     "name": "dynamo.custom.run cloud script"
                 }
            ]
        }
    ]
}
```

# Disaster Recovery / Cold Failover

It's possible to configure Ngenea Hub to be ablo to cold-failover to another node if it's running on a PixStor.

# Setup

Configure datastore

Configure Ngenea Hub to store it's persistent data on the GPFS filesystem so it can be read by multiple nodes. This is done by settings the following setting in /etc/sysconfig/ngeneahub

```
DATA_DIR=/mmfs1/.arcapix/ngeneahub/data
```

Configure Networking

It's strongly recommended to configure a floating IP that can be used for the Ngenea Worker to connect to. This will allow cold failover without having to reconfigure workers.

This can be done by setting the following settings in /etc/sysconfig/ngeneahub:

- SERVICE\_CIDR. Set this to the IP and netmask of the IP you want to be managed by ngeneahub. e.g. 192.168.2.3/24 for the IP 192.168.2.3 on a network with a netmask of 255.255.255.0
- SERVICE\_INTERFACE. Set this to the name of the interface the IP adress should be added to. e.g. man0

Configure the workers to use this IP by editing /etc/ngenea/ngenea-worker.conf on each worker node and modifying broker url and result backend

Install Ngenea Hub

Install Ngenea Hub on multiple nodes as usual. Make sure /etc/sysconfig/ngeneahub are in sync across these nodes. Enable and start the service on one node only. Leave the service disabled and stopped on the other nodes.

# Performing failover

In the case of a node failure, after confirming the services are no longer running on the other node, the following seteps can be performed to bring the serive up on another node:

important You must be certain the service is not running anywhere else before continuing, otherwise data loss can occur.

- Remove the lock file from \${DATA\_DIR}/.lock.
- Start the Ngenea Hub service

#### Migration from local datastore

AFter setting DATA\_DIR in /etc/sysconfig/ngeneahub and restarting the service, data will automatically be migrated. This is a one-way operation.

# External SSL

This document provides information on

- NGINX Installation on vanilla centos 7
- Configuration for SSL Termination and Reverse proxies to ngeneahub

# **Installing NGINX**

Adding the EPEL Software Repository

sudo yum install epel-release

```
sudo yum install nginx
```

Starting Nginx service

```
sudo systemctl start nginx
```

Check Nginx service Status

```
sudo systemctl status nginx
```

Nginx status output should look like this

```
Output

    nginx.service - The nginx HTTP and reverse proxy server

   Loaded: loaded (/usr/lib/systemd/system/nginx.service; disabled;
vendor preset: disabled)
   Active: active (running) since Mon 2022-01-24 20:14:24 UTC; 5s ago
  Process: 1898 ExecStart=/usr/sbin/nginx (code=exited, status=0/
SUCCESS)
  Process: 1896 ExecStartPre=/usr/sbin/nginx -t (code=exited,
status=0/SUCCESS)
  Process: 1895 ExecStartPre=/usr/bin/rm -f /run/nginx.pid
(code=exited, status=0/SUCCESS)
 Main PID: 1900 (nginx)
   CGroup: /system.slice/nginx.service
           ─1900 nginx: master process /usr/sbin/nginx
            -1901 nginx: worker process
Jan 24 20:14:24 centos-updates systemd[1]: Starting The nginx HTTP
and reverse proxy server...
Jan 24 20:14:24 centos-updates nginx[1896]: nginx: the configuration
file /etc/nginx/nginx.conf syntax is ok
Jan 24 20:14:24 centos-updates nginx[1896]: nginx: configuration
file /etc/nginx/nginx.conf test is successful
Jan 24 20:14:24 centos-updates systemd[1]: Started The nginx HTTP
and reverse proxy server.
```

The service should be active

To stop the Nginx service

```
sudo systemctl stop nginx
```

To disable the Nginx service

```
sudo systemctl disable nginx
```

To Enable the Nginx service

# Configuration for SSL Termination and Reverse Proxy using OpenSSL

Create Self-Signed Certificates for Nginx

Create the Certificate Configuration file named localhost.conf

```
[req]
default bits
                   = 2048
default keyfile
                  = localhost.key
distinguished name = req distinguished name
req_extensions = req_ext
x509_extensions = v3_ca
[req distinguished name]
countryName
                             = Country Name (2 letter code)
countryName default
stateOrProvinceName
                             = State or Province Name (full name)
stateOrProvinceName default = New York
                             = Locality Name (eg, city)
localityName
localityName default
                             = Rochester
organizationName
                             = Organization Name (eq, company)
organizationName default
                             = localhost
organizationalUnitName
                             = organizationalunit
organizationalUnitName default = Development
commonName
                             = Common Name (e.g. server FQDN or YOUR
name)
commonName default
                             = localhost
commonName max
                             = 64
[reg ext]
subjectAltName = @alt_names
[v3 ca]
subjectAltName = @alt names
[alt names]
DNS.1 = example.com
DNS.2
       = 127.0.0.1
```

Create the Certificate using OpenSSL using below command

```
sudo openssl req -x509 -nodes -days 365 -newkey rsa:2048 -keyout
localhost.key -out localhost.crt -config localhost.conf
```

Copy the Certificate Key Pair to the Certificates folder /etc/ssl/certs

```
sudo cp localhost.crt /etc/ssl/certs/localhost.crt
sudo cp localhost.key /etc/ssl/private/localhost.key
```

Creating configuration file for Nginx

Create a configuration file in /etc/nginx/conf.d/proxy.conf and Update the Nginx Configuration File to Load the Certificate Key Pair

```
server {
        listen 80;
        listen 443 ssl http2;
        listen [::]:443 ssl http2; #for IPv6
        server name example.com;
        #specify the certificate files to use
        ssl certificate /etc/ssl/certs/localhost.crt;
        ssl certificate key /etc/ssl/private/localhost.key;
        ssl protocols TLSv1.2 TLSv1.1 TLSv1;
        root /usr/share/nginx/html;
        #Serving index.html file when requesting /
        index index.html;
        #Reverse proxy for requests
        location / {
                proxy set header
                                        Host $host:8000;
                                        X-Real-IP $remote addr;
                proxy set header
                proxy set header
                                        X-Forwarded-For
$proxy add x forwarded for;
                proxy set header
                                        X-Forwarded-Proto $scheme;
                proxy pass http://localhost:8000/;#if running
outside docker you can use 127.0.0.1 or localhost instead of
host.docker.internal, or with docker with network mode: "host"
                proxy redirect off;
        }
}
```

Reload the Nginx service after you have made some configuration changes

```
sudo systemctl reload nginx
```

Configuration for SSL Termination and Reverse Proxy using Certbot and LetsEncrypt (Another method)

Add trusted SSL Certificates from Letsencrypt

We need to redirect all unencrypted HTTP connections to HTTPS. This is done with certbot and letsencrypt certificates. The certbot will obtain free certificates and also handle the renewal process automatically. To do that we will install certbot and also a plugin for our NGINX server.

```
sudo yum install certbot python3-certbot-nginx
```

Once we have installed those packages, we can obtain our certificates.

```
sudo certbot --nginx -d example.com
```

It will ask you if you want to redirect all traffic from HTTP to HTTPS. Select yes (2). This automatically makes some changes to our NGINX default configuration.

```
server {
  server name example.com;
  location / {
    proxy pass http://127.0.0.1:8000;
    listen [::]:443 ssl ipv6only=on; # managed by Certbot
    listen 443 ssl; # managed by Certbot
    ssl certificate /etc/letsencrypt/live/example.com/fullchain.pem;
# managed by Certbot
    ssl certificate key /etc/letsencrypt/live/example.com/
privkey.pem; # managed by Certbot
    include /etc/letsencrypt/options-ssl-nginx.conf; # managed by
Certbot
    ssl dhparam /etc/letsencrypt/ssl-dhparams.pem; # managed by
Certbot
}
server {
    if ($host = example.com) {
        return 301 https://$host$request uri;
    } # managed by Certbot
  listen 80 default server;
  listen [::]:80 default server;
  server name example.com;
    return 404; # managed by Certbot
}
```

# HTTPS Configuration for NgeneaHub

To configure NgeneaHub for HTTPS, a configuration file named 'nghub.conf' should be created under etc/nginx/conf.d/pixstor/ folder. It should contain the configuration below:

```
location /ngeneahub/ {
    proxy_pass http://localhost:8000;
    proxy_http_version 1.1;
    proxy_set_header Host $host;
    proxy_set_header X-Forwarded-Proto $scheme;
    proxy_set_header X-Forwarded-For $proxy_add_x_forwarded_for;
```

```
}
location /ngeneahub/ws {
    proxy_pass http://localhost:8000;
    proxy_http_version 1.1;
    proxy_set_header Host $host;
    proxy_set_header Upgrade $http_upgrade;
    proxy_set_header Connection "Upgrade";
    proxy_set_header X-Forwarded-Proto $scheme;
    proxy_set_header X-Forwarded-For $proxy_add_x_forwarded_for;
}
```

Reload the Nginx service after you have made some configuration changes

```
sudo systemctl reload nginx
```

To auto-renew the certificates, Run

```
certbot renew
```

# **Active Directory**

This section describes the Active Directory (LDAP) integration for Ngenea Hub.

# Configuration

The following settings control LDAP configuration.

The following are set in the main configuration file for Ngenea Hub at /etc/sysconfig/ngeneahub. Any setting which doesn't specify a default is required when LDAP ENABLED is true.

Setting	Description
LDAP_ENABLED	Setting to enable or disable LDAP-based authentication. Default: False
LDAP_HOSTNAME	The URI of the LDAP server.
LDAP_USERNAME	The 'distinguished name' of the user to use when binding to the LDAP server
LDAP_PASSWORD	The password matching LDAP_USERNAME for binding the the LDAP server
LDAP_USER_SEARCH	Domain to search for users who may authenticate.
LDAP_GROUP_SEARCH	Domain to search for groups to populate when mirroring groups
LDAP_MIRROR_GROUPS	If True, LDAP groups will be auto- populated (see below). Default: False

**Example Configurations** 

```
LDAP_ENABLED=True
```

```
LDAP_HOSTNAME=ldap://localhost
LDAP_USERNAME=cn=bind,cn=Users,dc=tech,dc=local
LDAP_PASSWORD=password123

LDAP_USER_SEARCH=cn=Users,dc=tech,dc=local
LDAP_GROUP_SEARCH=cn=Groups,dc=tech,dc=local
LDAP_MIRROR_GROUPS=False
```

## Log in with an AD user

After enabling and configuring LDAP as above, an AD user can log in to Ngenea Hub using their AD credentials.

The username corresponds to the AD user's sAMAccountName

A Ngenea Hub user account will be automatically created for that user.

Only AD users belonging to the LDAP USER SEARCH domain may authenticate.

When LDAP is enabled, non-AD users can still be created and authenticate as before.

### Managing users and groups from AD in HUB

The user account which is generate for an AD user behaves the same as any other Ngenea Hub user. This means it can be assigned to Ngenea Hub groups, and will gain the permissions from those groups.

By default, a new AD user will not belong to any groups, and therefore will not have any permissions. A privileged user will need to assign the user to any appropriate Ngenea Hub groups.

If LDAP\_MIRROR\_GROUPS is enabled, then when a user logs in to Ngenea Hub, groups will be automatically be created for any AD groups the user belongs to (if the group doesn't already exist), and the user will be assigned to those groups.

Only groups belonging to the LDAP GROUP SEARCH domain will be populated.

Mirrored AD groups behave the same as any other Ngenea Hub group, meaning permissions can be assigned to them to apply role-based access controls (RBAC). By default, mirrored AD groups will have no permissions assigned.

Any user can be assigned to a mirrored AD group. This WILL NOT change group membership in AD itself.

# Usage

### Web Interface

To access Ngenea Hub, go to http://example.com:8000/.

## Authentication

# Login

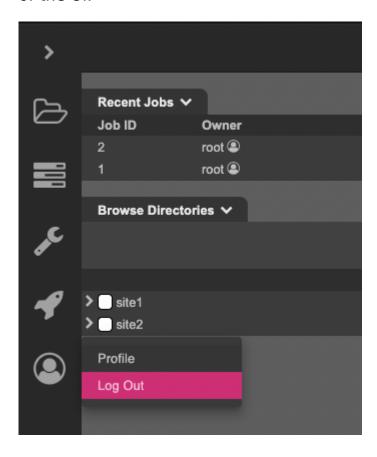

Upon navigating to the Ngenea Hub UI a login screen is presented.

Enter a valid username and password before pressing the Login button to authenticate.

# Logout

To end your session, select Logout from the Man Icon at the bottom left hand corner of the UI.

## **Browser**

Upon logging in, select the directory icon on the left hand side of the UI. This takes to the Browser page.

The Browser page allows users to see a list of recent jobs as well as browse all available directories across all Sites for the purpose of either migrating, premigrating, recalling, or sending files.

# **Recent Jobs**

The Recent Jobs section shows a list of the 5 most recent jobs that were initiated via the UI.

The view presents several columns:

Option	Description
Job ID	Shows the identification number associated with the job
Owner	Name of the user who created the job
Туре	Shows the job's type, i.e. Migrate, Recall, Premigrate, or Send
Site	Name of the Site where files were migrated from
Created	Shows the job's creation time
State	Shows the job's state, i.e. success or failure

#### Search

**Note:** Before you can use the search feature, additional set-up is necessary, as described in the search feature page.

Search section contains a search bar to discover the contents of the configured Sites.

The view presents a search bar, a button for managing the search filters and another button for starting and stopping the search. The view also presents (?) button to get more instructions about starting a search.

To search for a term, type the search term in the search bar and click Search button (or hit Enter key) to start a search. The default search filter is "core.filename".

Managing the search filters from the dialog

For more complex search operations, add more filters by clicking Apply Filters button and use the dialog opened after that. Type the search filter key in the input box with the label Search filter key and then pick an operator from the select box with the label Operator.

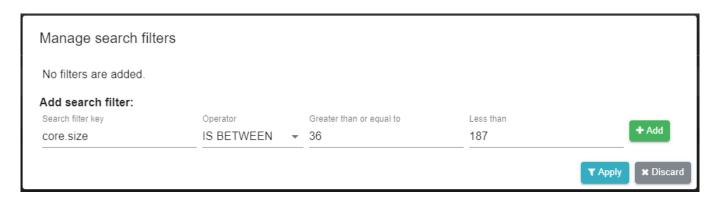

For the operator IS, the dialog is seen as in the image below:

Manage search filters				
No filters are added.				
Add search filter:				
Search filter key	10	Equal to		+ Add
core.size	IS	128		
	IS NOT		<b>▼</b> Apply	<b>X</b> Discard
	IS BETWEEN			site

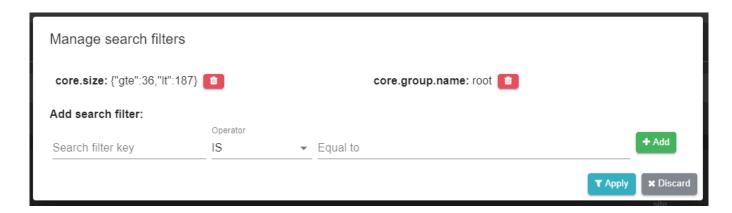

For the operator IS NOT, the dialog is seen as in the image below:

Manage search filt	ers					
No filters are added.						
Add search filter:						
Search filter key	Operator		Equal to			
core.size	IS NOT	~	128			+ Add
					<b>▼</b> Apply	× Discard

For the operator IS BETWEEN, the dialog is seen as in the image below:

Click Add button to add the search filter. The dialog is seen as in the image below, when "core.size" is selected to be greater than or equal to 36 and less than 187, and "core.group.name" is selected to be "root".

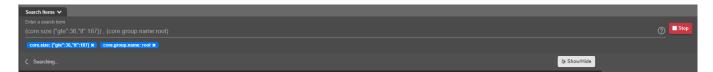

Once the selection is finished, click Apply button to save & close the dialog (this action does not submit the search). See that filters are shown as a query in the search bar and they are shown with badges under the search bar. The search section is seen as in the image below, after the search filters are selected:

Submitting the search and viewing search results

Click Search button, or hit Enter key to start the search. The search section will contain search results from each configured site, matching with the search filters. To stop the search, click Stop button. The search section is seen as in the image below after the search is in progress.

The search section is seen as in the image below after some results are found.

Advanced usage: Managing the search filters from the search bar

You can also make complex search operations by typing the search term in the format below:

```
(<key1>:<value1>) , (<key2>:<value2>) , (<key3>:<value3>) ...
```

For multiple search filters, you need to separate them by paranthesis. For using various comparison operators, here are the filter formats:

Operation	Format
Equal to	( <key1>: <value1>)</value1></key1>
Less than	( <key2>: {"lt": <value2> })</value2></key2>

Operation	Format
Greater than or equal to	( <key3>: {"gte": <value3> })</value3></key3>
Combined	<pre>(<key4>: {"gte": <value4>, "lt": <value5> })</value5></value4></key4></pre>

### **Browse Directories**

The Browse Directories section contains a list of configured Sites and correspondent directories under the Sites' filesystems.

The view presents several columns:

Option	Description
Name	Shows the name of the Site, directories, and files
Type	Shows whether the listed item is a Site, directory, or file
Size	Shows the directories and files size
Status	Shows whether files are online or offline

User can select one or multiple directories, or one or multiple files to migrate, premigrate, recall them or send them to a different Site.

# Migrate

To Migrate a directory or file, expand the Site containing said directory and file. Select the directory or file you wish to Migrate by ticking their relevant boxes.

Click the "Actions" button at the top right hand side of the page and select "Migrate".

A new Job is created and it is shown at the top of the "Recent Jobs" list. Job's State will display a progress bar until completion.

Once job is complete, the State will either show as Success or Failed.

# Premigrate

To Premigrate a directory or file, expand the Site containing said directory and file. Select the directory or file you wish to Premigrate by ticking their relevant boxes.

Click the "Actions" button at the top right hand side of the page and select "Premigrate".

A new Job is created and it is shown at the top of the "Recent Jobs" list. Job's State will display a progress bar until completion.

Once job is complete, the State will either show as Success or Failed.

#### Recall

To Recall a directory or file, expand the Site containing said directory and file. Select the directory or file you wish to Recall by ticking their relevant boxes.

Click the "Actions" button at the top right hand side of the page and select "Recall".

A new Job is created and it is shown at the top of the "Recent Jobs" list. Job's State will display a progress bar until completion.

Once job is complete, the State will either show as Success or Failed.

Send

**Premigrate behaviour change:** Prior to Ngenea Hub 1.8.0, the send workflow would migrate data on the source site. This has been changed to pre-migrate.

To Send a directory or file from one Site to another, expand the Site containing said directory and file. Select the directory or file you wish to Send by ticking their relevant boxes.

Click the "Actions" button at the top right hand side of the page and select "Send".

Select the Site you wish to send the directory and/or files to. Tick the "Hydrate files on destination" if required, and click "Confirm".

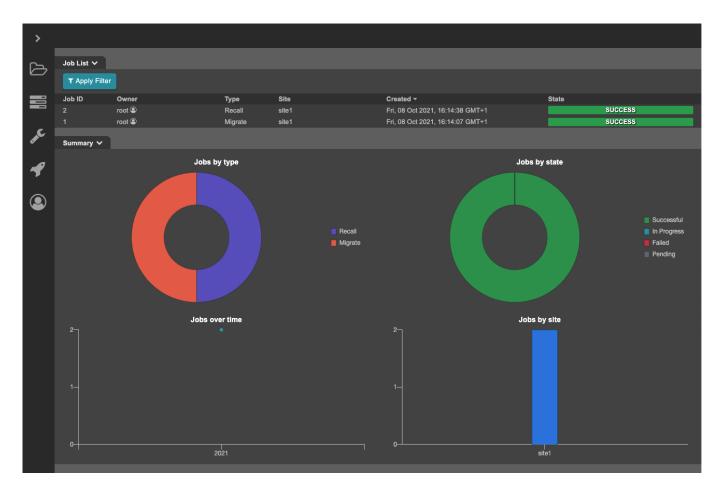

A new Job is created and it is shown at the top of the "Recent Jobs" list. Job's State will display a progress bar until completion.

Once job is complete, the State will either show as Success or Failed.

Expanding the receiving Site's Directories now shows the path that was replicated from the sending Site.

Jobs

The Jobs page shows a list of all the jobs that were initiated via the UI.

The view presents several columns:

Option	Description
Job ID	Shows the identification number associated with the job
Owner	Name of the user who created the job
Туре	Shows the job's type, i.e. Migrate, Recall, Premigrate, or Send
Site	Name of the Site where files were migrated from
Created	Shows the job's creation time
State	Shows the job's state, i.e. success or failure

Each column can be sorted in ascending and descending order.

# **Pagination**

To select whether to view 20, 50, or 100 Jobs at the time, choose the relevant option in the "Items per Page" dropdown.

Clicking on the right and left arrow next to "Items per Page" will take you to the next/previous pages.

# **Apply Filter**

Jobs list can be filtered by time period, job type, and job state.

To filter the list, select the "Apply Filter" button on the top left hand side of the UI.

Select one or a combination of filters, and click "Apply".

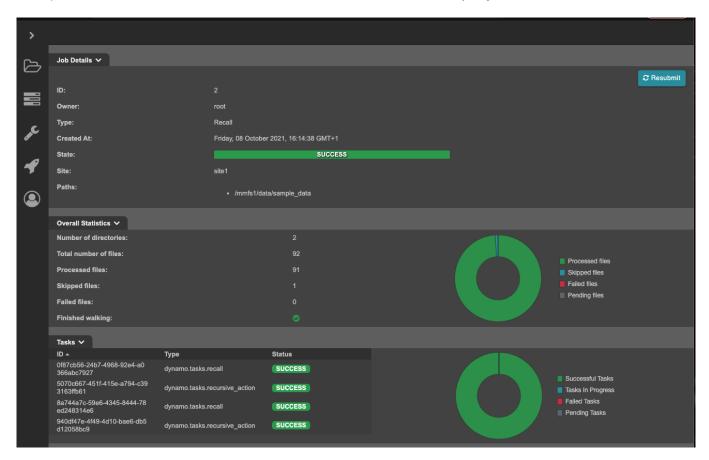

Job are now filtered as per your selection.

To remove a filter, simply select the "x" next to the applied filter.

## Job ID

On the Jobs page, click on a Job ID to see additional information regarding the Job.

The Job Details, Overall Statistics, and Tasks tab are displayed.

Each tab shows specific Job details, some of which are clickable:

- Overall Statistics --> Total number of files, processed files, skipped files, and failed files.
- Tasks --> ID

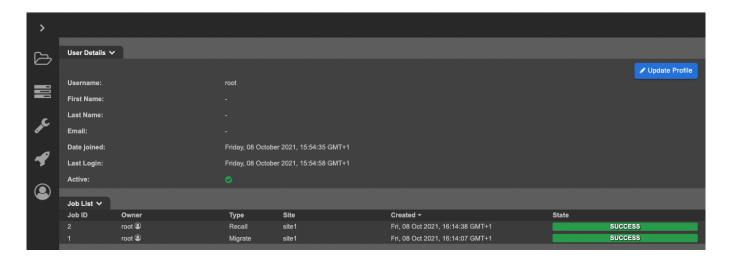

Selecting any of the clickable items opens a dialogue showing the relevant output.

Jobs can also be resubmitted by clicking the "Resubmit" button at the top right hand side of the page.

#### Owner

On the Jobs page, click on any Owner to see additional information regarding the user who initiated the Job.

Selecting an Owner takes to a page that shows details about the user, as well as a list of Jobs initiated by said user.

If you selected your own user, you will see an "Update Profile" on the top right hand side of the page.

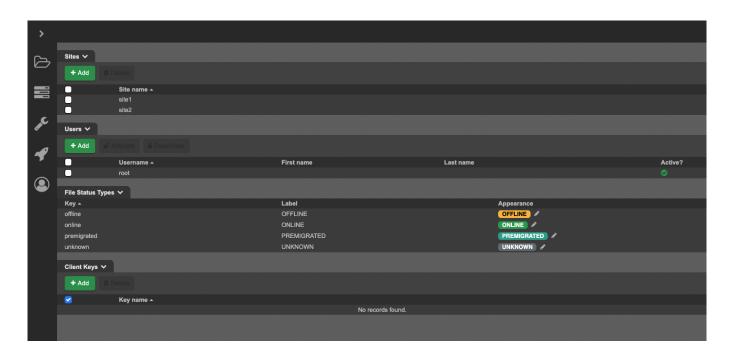

This takes you to the "Update User" page where you can change your own password, email, first name and last name.

The Job List's layout is the same as the one shown in Jobs page and has the same functionalities.

#### Administration

The Administration page allows you to add and delete Sites, add, activate and deactivate Users, as well as changing the name and colours of the labels found in the Browse Directories section.

#### Sites

The Sites tab contains the list of Sites that have been configured. This list can be sorted by Site name in ascending and descending order.

#### Add Site

To add a Site, select the "Add" button, enter a Site name, and confirm by clicking "Add"

#### **Delete Site**

To delete a Site, select one or multiple Sites by ticking their correspondent boxes. Click "Delete" and then confirm deletion once the "Delete Site" dialogue is presented.

#### Users

The Users tab contains the list of Users who are allowed to use the UI. This list can be sorted by Username in ascending and descending order.

#### Add User

To add a new User, select the "Add" button, then enter a Username, Password, Email, First Name, and Last Name.

Confirm by clicking "Add".

### **Activate User**

To activate an existing User, select the "Activate" button, and then confirm activation once the "Activate user" dialog is presented.

#### Deactivate User

To deactivate a User, select one or multiple Users by ticking their correspondent boxes. Click "Deactivate" and then confirm deactivation once the "Deactivate user" dialogue is presented.

User will no longer have access to the UI but still exists and can be reactivated at any time.

## File Status Types

The File Status Types tab lists the labels that are used to indicate a file's status.

The labels are customisable as both colour and label name can be changed.

To change the appearance of a label, select the pencil symbol next to the label that needs updating.

"Update File Status Type" page is displayed:

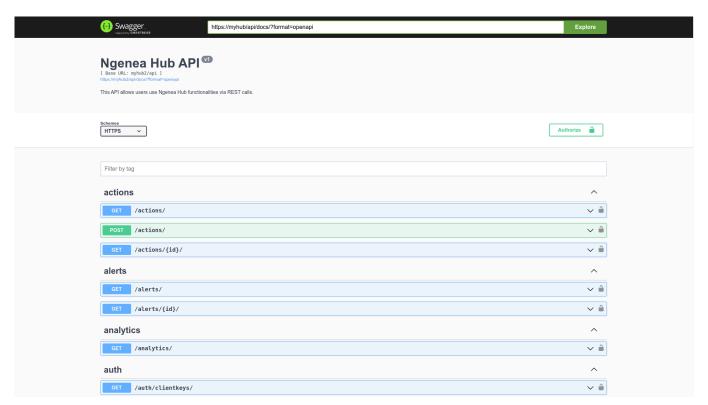

Change label name, background colour, or text colour as per your preference.

Click "Save" to confirm the update.

## **API**

### Reference

The API reference can be found at your Ngenea Hub install at http(s)://myhub/api/docs/. This section does not attempt to duplicate the reference, but instead provide some usage examples.

### Authentication

Authentication to the API can be performed in 2 ways

- IWT Authentication
- Client Keys

The first one is for interacting with the API interactively and is therefore most likely not suitable for building automated workflows. On the other hand, client keys are valid until they are revoked and are more suitable for automation.

## **JWT** Authentication

To use the API directly, authentication tokens should be generated to prevent sending the username and password repeatedly. You need to generate these tokens by sending your username-password pair to the login endpoint: /auth/token/

```
curl -s -X POST 'http://localhost:8000/api/auth/token/' -H 'Accept:
application/json' -H 'Content-Type: application/json' -d
'{"username": "dfoster", "password": "******"}' | jq -r
{
   "access": <access_token>,
   "refresh": <refresh_token>,
}
```

There are 2 types of authentication tokens:

- Access token
- Refresh token

Access tokens are used for doing API requests. You need to include the token in the Authorization header to use any other endpoint:

```
curl -s -X GET 'http://localhost:8000/api/jobs/' -H 'Accept:
application/json' -H 'Content-Type: application/json' -H
"Authorization: Bearer $JWT ACCESS TOKEN" | jq
{
  "count": 0,
  "next": null,
  "previous": null,
  "results": [],
  "stats": {
    "type": {
      "migrate": 0,
      "premigrate": 0,
      "recall": 0
    },
    "state": {
      "SUCCESS": 0,
      "FAILURE": 0,
      "STARTED": 0,
      "PENDING": 0.
      "ERROR": 0
    "created": {},
    "site": {}
  }
}
```

On the other hand, refresh tokens are used for refreshing the access token. For security purposes, access tokens expire in 1 hour and refresh tokens expire in 1 day. When an expired token is used, one of HTTP 401 Unauthorized and HTTP 403 Forbidden errors is received. In that case, you need to refresh the access token with /api/token/refresh/ endpoint:

```
curl -s -X POST 'http://localhost:8000/api/auth/token/refresh/' -H
'Accept: application/json' -H 'Content-Type: application/json' -d
'{"refresh": "<refresh_token>"}' | jq -r
{
    "access": <new_access_token>,
}
```

Refresh tokens can also be expired too. In that case, you need to send your credentials (username and password) again to obtain new token pair.

Client Keys Creating Client Keys

**Note:** The UI does not currently support creating client keys and therefore have to be done via the API directly

Before we can authenticate using the client key, we need to temporarily authenticate using JWT to be able to create a client key.

To get a valid JWT access token using curl and jq:

```
export JWT_TOKEN=$(curl -s -X POST 'http://localhost:8000/api/auth/
token/' -H 'Accept: application/json' -H 'Content-Type:
application/json' -d '{"username": "dfoster", "password":
"******"}' | jq -r .access)
echo $JWT_TOKEN
<token>
```

This can now be used to create a client key:

```
curl -s -X POST 'http://localhost:8000/api/auth/clientkeys/' -H
'Accept: application/json' -H 'Content-Type: application/json' -H
"Authorization: Bearer $JWT_TOKEN" -d '{"name": "my_automation_key"}'
| jq '.'
{
    "url": "http://localhost:8000/api/auth/clientkeys/1/",
    "id": 1,
    "name": "my_automation_key",
    "api_key": "YOUR_API_KEY"
}
```

{warning} This **is** the only time the client key will be visible, make sure it **is** recorded.

Using Client Keys

The key created in the previous section can now be used by setting the header Authorization: Api-Key YOUR\_API\_KEY against an API endpoint. For example:

```
export API_KEY=YOUR_API_KEY

curl -s -X GET 'http://localhost:8000/api/jobs/' -H 'Accept:
```

```
application/json' -H 'Content-Type: application/json' -H
"Authorization: Api-Key $API KEY" | jq
{
  "count": 0,
  "next": null,
  "previous": null,
  "results": [],
  "stats": {
    "type": {
      "migrate": 0,
      "premigrate": 0,
      "recall": 0
   },
    "state": {
      "SUCCESS": 0,
      "FAILURE": 0,
      "STARTED": 0,
      "PENDING": 0,
      "ERROR": 0
    "created": {},
    "site": {}
  }
}
```

# Submitting Workflow

To submit a workflow, the following parameters are required:

name	description		
workflow	The name of the workflow to submit		
paths	A list of paths to execute the workflow on		
site	The name of the site where the workflow should be started from. Steps within a workflow may run on different sites.		

In addition, the following optional parameters may be provided:

name	description
discovery	Name of the file discovery technique to use. Currently the only supported discovery is recursive. If no discovery is specified, recursive will be used as the default. If explicitly set to null, no discovery will be performed and the
	provided paths will be used 'as is'.
fields	Additional parameter for the workflow, typically used by custom workflows.

## Migrate

Using a Client Key stored in a environment variable TOKEN, the following is an example of migrating a file using curl.

```
curl -s -X POST 'http://example.com/api/file/workflow/' -H 'Accept:
application/json' -H 'Content-Type: application/json' -H
"Authorization: Api-Key $TOKEN" -d '{"paths": ["/mmfs1/data/
sample_data.tgz"], "site": "dfoster1", "workflow": "migrate",
"discovery": null}'
```

**Note:** Since we're only migrating a single file, we don't need recursive discovery, so discovery has been set to null to disable it.

## **Trailing Slashes**

In general, the endpoint used with POST requests must have a trailing slash.

For example, a POST request made to http://example.com/api/file/workflow would error, but if made to http://example.com/api/file/workflow/ it would work.

## Monitoring and Management

### systemd service

Ngenea Hub is controlled via the ngeneahub systemd service

#### ngeneahubctl cli tool

The ngeneahubctl tool can be used to manually stop/start the services, outside of systemd, for debugging

#### Docker containers

Ngenea Hub uses a collection of docker containers, which can be managed by standard Docker monitoring/management tools and processes:

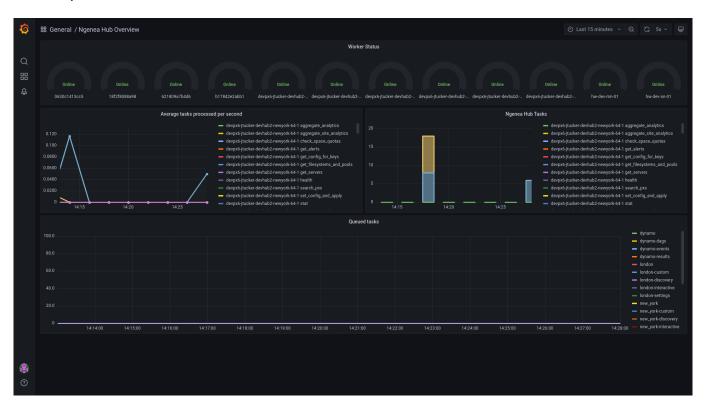

Container Name	Description
ngeneahub_app_1	Web application
ngeneahub_jobrefresh_1	Maintenance task controller
ngeneahub_db_1	Application database (Postgres)
ngeneahub_redis_1	Task results backend and celery broker

#### **Hub Task Metrics**

Hub provides a Grafana panel of the Tasks in the Hub queue and the status of the Workers.

To view the Metrics open the URL as follows, substituting the location of your hub. http(s)://myhub/hubmetrics

It is required to be authenticated to Hub in order to view the metrics.

# Health endpoints

To view the state of all sites and related nodes within known to Ngenea Hub, a GET request can be performed to /api/health to view all of the sites, nodes and the hub service itself. The states are currently based on how many nodes are online for each site using the following states:

State	Description
ok	All nodes are functional
warning	Some nodes are offline within a site
critical	One or more sites are completely offline

An example output of the health endpoint can be seen below:

```
"name": "pixstor-east-ng-test", "health": "ok",
                       "online": true
                   }
              1
          }, {
               "site": "site2", "health": "ok", "nodes": [
                     {
                        "name": "pixstor-west-ng-test", "health":
                        "ok", "online": true
                     }
               ]
          }
     ]
}
A request can also be performed to specific sites using /api/sites/ID/health/ to
view the site specific health status:
```json {
     "site": "site1", "health": "ok", "nodes": [
          {
              "name": "pixstor-east-ng-test", "health": "ok", "online": true
          }
     1
}
```

## **Custom Workflows**

# Defining workflows

It's possible to define custom workflows which use pre-defined rules as building blocks to create your workflow.

**Note:** Custom workflows are not currently exposed via the UI. Use the API /api/workflows/ endpoint to create custom workflows

A workflow definition requires the following parameters:

Name	Description	
name	The unique name for this workflow. For easy of submission again the API, this should not contain spaces.	
label	The human readable name for this workflow, can contain spaces.	
icon_classes	List of icon classes to represent the workflow in the UI. Font Awesome is useful here.	
filter_rules	A list of rules to apply to provided files that match defined states. Described in more detail below.	
fields	A list of runtime fields. Described in more detail below.	

# Additionally, you can optionally provide:

Name	Description		
discovery	Which discovery task the workflow should be used by default, this can be either recursive or snapdiff.		
discovery_options	A json containing any additional options to pass to the workflow default discovery. Described in more detail below.		

### Filter Rules

Filter rules are defined in JSON. They are a list of individual rules in a mapping format that will be performed on each matching file result when a discovery task is complete. If called through the API with no discovery task provided, rules will be applied to any states provided in the workflow input.

Steps are defined in JSON. Steps is a list of individual steps that will be performed serially. Each rule must contain the following:

Name	<b>Description</b> Req	<b>Juired</b>
state	The state of a result provided by the discovery task with any given path, an example of that could be "processed" or "modified" more details about this are in the discovery section.	
type	The type of result the rule will apply to, the only Yes valid types are: file  directory symlink all	
action	Yes	

Name	Description	Required
	A list of tasks to perform on files that match the state and type	
include	A list of globs to apply to provided files to limit actions to just them.	No
exclude	A list of globs to apply to provided files. Described in more detail below.	No
ignore_site_includes	Whether to ignore any global includes defined on the site the workflow will run on	No
ignore_site_excludes	Whether to ignore any global excludes defined on the site the workflow will run on	No

These rules control which actions will be performed on certain files based on their given state that they have been given following specific discovery tasks such as snapdiff or provided in the initial input of a workflow. These states can allow direct control of workflows performed on files provided, allowing multiple workflow paths within the same job by utilizing multiple rules controlling specific states with additional control with include and exclude path rules.

Alongside rules bound to a state, there are two special states that rules can be used, these being default and all. Rule sets cannot have both default and all rules within them, but it is possible to have multiple of one type with different sets of exclude and include rules to allow for more granular control.

Rules defined with default as their state and type will perform their action on paths that have not been captured by all other rules within a given rule set. This means that if there are specific file states that need to be actioned differently, paths that do not match any other rules actioned against without ignoring those non-matching paths.

The other special rule type is rules with the state and type of all. This rule will perform its action on all paths regardless of their provided type and state. This is an additional operation so if another rule has an explicit rule provided it will perform multiple actions on the same path, for each matching rule in rule set. Simple workflows are typically composed of a single rule with the state and type of all as this will simply process all paths provided to it.

Within each rule, there must be a list of actions to perform on the resulting file provided within the action key. These actions will be performed serially. Each action must be a mapping that contain the following in each entry:

Name	Description	Required	
name		Yes	

Name	Description	Required
	The name of the task to	
	run, e.g.	
	<pre>dynamo.tasks.migrate</pre>	
site	The name of the site to run against, if this is not provided it will use the site provided within the workflow call.	No

If steps have optional arguments, these can be passed as additional key:value pairs in these step definition mapping to pass those optional arguments.

As an example we can define a generic rule that captures every type of file and state and sends it to a second site, this would be useful for a bulk move using the recursive discovery task to cover all types of files in directories provided to the task:

#### Runtime fields

A workflow needs to be able to accept parameters as it submitted. Taking example #1 above, "london" doesn't want to be hardcoded as the destination site, as that would mean a new workflow would need to be defined for each possible destination.

Instead, fields can be defined, that in turn will need to be provided at workflow submission time. Fields are defined as a mapping with the following keys:

Name	Description	Required
name	The name of the field.	Yes
label	The friendly name for this field, used for presenting in the UI	
type		Yes

Name	Description	Required
Name	<ul> <li>Description</li> <li>The type of the field, valid options are:         <ul> <li>string - a free text field</li> <li>int - a free text field that will be validated a integer</li> <li>bool - a checkbox</li> <li>choices - A dropdown box representing a list of choices, populated from choices list of objects.</li> <li>enum[enum_type] - A dropdown box representing a choice of option, populated</li> </ul> </li> </ul>	Required
	from enum_type. enum_type can be one of the following  o site - A list of all	
	the sites Ngenea Hub has defined • list - a list of values of any scalar type	
default	The default value for runtime fields	optional

The following is an example of a custom field definition for providing a site to an action step:

```
Example 2 - Custom field definition

[
          "name": "target_site",
          "label": "Site to migrate to",
           "type": "enum[site]"
     }
]
```

```
Custom field defintion with default value
[
         "name": "target_site",
         "label": "site to migrate to",
         "type": "enum[site]",
         "default": "london"
```

```
}
]
```

If default value is specified in runtime fields, it will take the default value for fields while running workflow if the user input is not given otherwise it will always use the user input.

Back in the definition of an action step, any value that is prefixed with a \* will be used as a field name and the value replaced instead of a literal string.

The following example, modifies example #1 to use the custom field as defined in example #3:

So, a complete request to create a workflow that will process all file and state types with a dynamic "site" field will look like:

```
Example 4 - Full workflow request
{
    "name": "send file",
    "label": "Send files from one site to another",
    "icon_classes": ["fa fa-cloud fa-stack-2x text-primary", "fa fa-
refresh fa-stack-1x text-light"],
    "filter rules": [
        {
             "state": "all",
             "type": "all",
             "action": [
                 {
                     "name": "dynamo.tasks.migrate"
                 },
                     "name": "dynamo.tasks.reverse stub",
                     "site": "*target site"
                 }
             ]
        }
    "fields": [
```

```
{
    "name": "target_site",
    "label": "Site to migrate to",
    "type": "enum[site]"
}
]
```

The following is an example of a custom field definition for providing a choices to an action step:

# Example 5 - Custom field definition { "name": "sync policy", "label": "sync\_policy", "type": "choices", "choices": [ { "label": "Newest", "value": "newest" }, { "label": "Sourcesite", "value": "sourcesite" } ] } ]

choices support both string and integer type values.

Back in the definition of an action step, any value that is prefixed with a \* will be used as a field name and the value replaced instead of a literal string.

The following example, uses the custom field in action:

So, a complete request to create a workflow that will process all file and state types with a static choices field will look like:

```
Example 7 - Full workflow request
{
    "name": "send file",
    "label": "Send files from one site to another",
    "icon": "<span class='fa-stack'><i class='fa fa-cloud fa-
stack-2x text-primary'></i><i class='fa fa-angle-right fa-stack-2x</pre>
text-light'></i></span>"
    "filter_rules": [
        {
             "state": "all",
             "type": "all",
             "action": [
                 {
                     "name": "dynamo.tasks.migrate"
                 },
                     "name": "dynamo.tasks.reverse stub",
                     "sync_policy": "*sync_policy"
                 }
             ]
        }
    "fields": [
        {
             "name": "sync policy",
             "label": "sync policy",
             "type": "choices",
             "choices": [
                {
                   "label": "Newest",
                   "value": "newest"
                },
                   "label": "Sourcesite",
                   "value" "sourcesite"
                }
             ]
        }
    ]
}
```

## **Running Workflows**

Once a workflow has been defined, it can be performed through the file browser by selecting files and directories and clicking the actions button. It is then possible to select the workflow you wish to call, this workflow call will not use a discovery task unless a directory is selected, in that case it will make use of the recursive discovery step.

This can also be performed via a POST request to /api/file/workflow. When called through the API, you have the option to provide a discovery step, these steps can expand the initial paths provided to them to either recursively perform actions or perform something like a file difference scan.

Name	Description	Туре	Required
paths	A list of paths to perform the workflows against, these can be just strings of file absolute file paths or can be JSON with the keys of "path" and "state", detailed example in example 7	JSON List	Yes
site	The site to perform the workflow against	String	Yes
fields	The runtime fields for a workflow	String	Yes
discovery	The discovery phase to use for this workflow run, this will override any defaults	String	No
job	The ID of a job that this workflow should be run within	Integer	No

Following the example workflow defined above, you can call the workflow to recursively send all files within any paths provided using the following POST to / api/file/workflow:

This will now migrate all files within /mmfs1/data/project\_one and /mmfs1/data/project two and then recall them at the site defined as dublin.

If there is a more complex workflow that have been defined that includes rules for specific states, the input paths can include this state information. This behaviour can be only be used when no discovery state is provided, an example of a custom rule set using could be:

```
Example 9 - Calling workflow with state data
{
    "name": "migrate state",
    "label": "Stateful file migration",
    "filter rules": [
        {
             "type": "all",
             "state": "modified",
             "action": {
                 "name": "dynamo.tasks.migrate"
             }
         {
             "type": "all",
             "state": "moved",
             "action": {
                 "name": "dynamo.tasks.delete paths from gpfs"
             }
        }
    "discovery": null,
    "fields": []
}
```

Here is a simple rule set that will migrate all paths provided with the state modified and will delete all paths provided with the state moved. With this example workflow provided you can perform a POST to /api/file/workflow with the following JSON:

Using multiple state based rules with different include and exclude path filters, you could achieve more complex behaviour in workflow calls for more finite control.

## Discovery Steps

Discovery steps can make complex large bulk operations much more manageable to call, allowing you to provide a single path that expands to cover all the contents of a path, or to see time based differences for a given path.

**Note:** If a workflow is submitted without a discovery task explicitly provided, it will default to using the discovery task defined as the default during the workflow's creation, visible via the workflow's "discovery" attribute. To avoid this, it is possible to explicitly pass null as the discovery task via the API to skip any discovery phase and additional processing on the paths provided and instead process the actions specified using the rules, without any additional checks.

Name	Description	Supported states	
recursive	Performs a recursive expansion of the initial provided paths. This allows paths to be expanded to cover all sub file and directories, it will then perform the defined action for all the generic rules in a workflow against all resulting files.	all	
snapdiff	Performs a time based file scan on an independant fileset between the last time a scan was performed. It will retrieve all file differences between those moments in time and the state of that file.	<pre>created updated moved  deleted all</pre>	

For more complex discovery steps such as snapdiff, there are defined states that files, directories and links can be in once it has completed its scan. This allows more explicit control of file and state control within a single call to a workflow. If for example you want all results with the type of file that have the state created to be sent to another site without any temporary files, a rule to cover that could be:

```
},
{
    "name": "dynamo.tasks.reverse_stub",
    "site": "*target_site"
}
]
```

# **Discovery Options**

Additional options can be passed to the discovery task by setting discovery\_options on the workflow. The supported options are those described in Discovery Steps.

```
Example 12 - Passing options to the discovery
{
    "discovery": "recursive",
    "discovery_options": {
        "skip_missing": false
    }
}
```

Discovery options will be used with the workflow default discovery only. If a different discovery is set at runtime, the discovery options will be ignored. Discovery options cannot currently be overwritten at runtime.

### Includes and Excludes

Includes and excludes can be used to select paths that individual filter rules should apply to, or generally limit which paths should be handled during a workflow run.

Include/exclude patterns behave like unix shell pattern matching ('globbing'). The 'wildcard' asterisk character \* will match any characters within a string. Patterns must match whole paths; partial matches are not supported, except through the use of wildcards.

Includes and excludes are combined as "a path matching any includes and not any excludes". For example {"include": ["/mmfs1/data/\*"], "exclude": ["\*.tmp"]} would match only files in /mmfs1/data, but not files in that directory with the .tmp extension. If no includes are defined, then all files are considered included (unless explicitly excluded).

There are three places where path include and exclude patterns can be defined:

- on a site
- within a filter rule
- at runtime, when a workflow is submitted

Site patterns can be used to apply includes and excludes globally, to all workflows and workflow steps. If defined, these will be appended to any patterns defined within a filter rule or at runtime.

For example, if a rule defines {"exclude": ["\*.tmp"]} and the site defines {"exclude": ["\*.cache"]}, then the combined excludes for that rule would be {"exclude": ["\*.tmp", "\*.cache"]}

If not desired, this behaviour can be overridden by specifying ignore\_site\_includes / ignore\_site\_excludes either on a per-rule basis, or for all rules by passing those parameters when submitting a workflow run.

For workflows involving multiple sites, such as send and sync, only the primary (source) site patterns will be considered.

If includes and excludes are passed when submitting a workflow, they will be applied to all filter rules within the workflow, replacing any patterns already defined within the workflow rules. Any site patterns will be appended to the runtime patterns, unless 'ignore' is specified.

## Jobs

## Housekeeping

Job details are kept for a time after job completion. During this time, they can be viewed in the UI.

But older jobs are periodically culled from the database, to keep it to a manageable size. The housekeeping process runs once a day, and removes results for any job that completed more than 90 days ago (by default). A different 'time-to-live' (TTL) can be set using the jobs\_ttl configuration - see Configuration for more information.

# Site Sync

Ngenea Hub provides the facility for syncing data from one site to another.

Site Sync applies changes in one direction. See also Bidirectional Site Sync for applying changes in both directions.

Synchronisation is achieved by utilising a scheduled workflow which periodically discovers file and directory changes within an Independent Fileset on a source site and applying those changes to a target site. Changes are applied by sending newly created or recently modified files and directories, including deleting or moving files or directories in place on the target site as necessary to match the source site.

The following walkthrough details how to set up a sync between two sites ('Site Sync') using the Ngenea Hub UI.

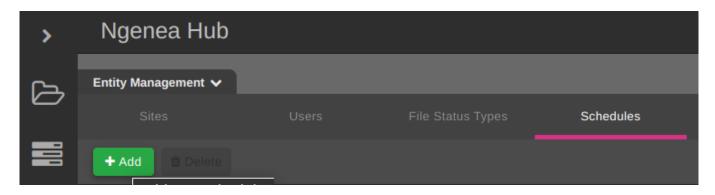

The REST API can also be utilised to achieve the same setup.

## Schedule

A schedule defines when and how often a sync occurs.

In the Ngenea Hub UI, navigate to the Administration page, and select the Schedules tab.

To create a new schedule, click the Add button.

Configure the schedule by entering appropriate details into the Add new schedule dialog:

- 1. Enter a descriptive Name for the schedule, E.G. "sync-to-site2"
- 2. Select the source site from the dropdown menu
- 3. Set the Discovery to snapdiff. Snapdiff discovery uses snapshots to track changes over time within an Independent Fileset.
- 4. Set the Path to the top level directory (path) of the Independent Fileset to be synchronised
- 5. Set the time criteria
- 6. Click the Add button to add the new schedule

## **Time criteria**

A schedule utilises cron syntax. By default, all the fields are populated with \* - this means the schedule will run every minute. This is likely too frequent as the calculation of file changes could take longer than the time between the schedule running every minute. Sizing for an ideal setup will balance the need to sync files quickly versus how long the sync snapdiff stage takes to run. This can be most effectively achieved through observation.

### **Examples:**

To enact the schedule every 5 minutes, specify the Minute field as follows: \*/
 5.

- To enact the schedule once an hour, set the Minute field to a number of minutes past the hour. Setting Minute to 5 will run the sync once an hour at 5 minutes past the hour.
- To enact the schedule at set times throughout the hour, change the Minute field separating entries by commas (E.G.) 7,23,46

### Workflow

Schedules enact a workflow. A workflow performs one or more series of tasks to files and/or directories.

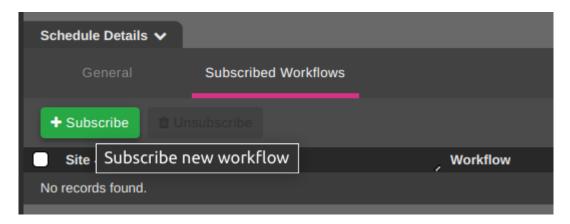

In the Ngenea Hub Hub UI, navigate to the Administration page, and select the Schedules tab.

Select the prior created schedule in the Schedules tab, which then displays the Schedule Details page.

# Subscribing a workflow

To associate a workflow with a schedule undertake the following actions:

1. Click Subscribe and in the create dialogue set Site to the source site from which to synchronise.

Ngenea Hub provides a built-in workflow for synchronising changes from an Independent Fileset on a source site to a target site.

1. Select Sync Fileset to Site from the Workflow dropdown menu.

Configure the workflow subscription settings by entering appropriate details into the Subscribe workflow to schedule dialog:

1. Select the target site in the Destination site

- 2. Select an appropriate Sync Policy
- 3. Click Subscribe to associate the workflow to the schedule

# **Sync Policy**

The Sync Policy setting controls how conflicts are resolved. A conflict may occur if (E.G.) different versions of the same file exist on both source and target sites. By default, the newest version of the file will be retained.

### **Outcome**

Now associated (subscribed), files and/or directories will synchronise at the next scheduled execution time. When executing the scheduled workflow, two jobs appear within the schedule details page. One for the snapdiff discovery, and one for the subscribed sync workflow.

The first enactment of the sync will synchronise all files and directories in the Independent Fileset from the source site. Further enactments will synchronise files and/or directories created, modified, deleted or moved since the last enactment and the time of the most recent enactment.

### Additional Options

Associating more than one workflow to the same schedule can be utilised to synchronise from the same source site to another target site. Additional workflows cause creation of an additional job, and run simultaneously with other syncs enacted from the same schedule.

# Troubleshooting

If you encounter issues with sync, refer to the sync troubleshooting guide page for guidance.

# Bidirectional Site Sync

Ngenea Hub provides the facility for syncing data between sites.

Bidirectional Site Sync is similar to Site Sync, but applies changes in both directions. If a Bidirectional Site Sync runs between sites A and B, changes on site A will be applied on site B, followed by changes on site B being applied on site A.

Synchronisation is achieved by utilising a scheduled workflow which periodically discovers file and directory changes within an Independent Fileset on each of the sites and applies those changes to the other site. Changes are applied by sending newly created or recently modified files and directories, including deleting or moving files or directories in place on the target site as necessary to match the other site.

A prerequisite for a working Bidirectional Site Sync is that the Independent Fileset has been created on both sites.

The principles of setting up Bidirectional Site Sync are similar (but with some differences explained below) to setting up a Site Sync, so please refer to the walkthrough on the Site Sync page for detailed instructions. It can be done using the Ngenea Hub UI or the REST API.

### Schedule

# **Discovery**

Create a new schedule. Unlike with Site Sync, for Bidirectional Site Sync set the schedule's Discovery to bidirectional snapdiff.

This discovery type operates identically to the snapdiff discovery type, with snapshots used to track changes over time within an Independent Fileset.

A separation is enforced between bidirectional\_snapdiff schedules and schedules with other discovery types. Whereas the Discovery of other schedules may be changed, a change from or to the bidirectional\_snapdiff discovery type is not allowed. This is to ensure consistency of the specific workflow rules that apply to Bidirectional Site Sync.

### Time criteria

Unlike with Site Sync, a Bidirectional Site Sync will not be triggered if the previous sync is still running. This means that some syncs will be skipped if scheduled closer together than the time it takes to complete a sync.

### Workflow

# Subscribing a workflow

Select the Bi-directional Site Sync workflow.

This is the only workflow that may be subscribed to a bidirectional\_snapdiff schedule, and it cannot be subscribed to other types of schedule.

A bidirectional snapdiff schedule may have at most one subscribed workflow.

### **Outcome**

When executing the scheduled workflow, only one job is created and appears within the schedule details page. This job includes the tasks for both the snapdiff discoveries (one on each site), as well as the tasks that enact the sync in each direction.

### Troubleshooting

If you encounter issues with sync, refer to the sync troubleshooting guide page for guidance.

# Search

**Note:** Before you can use the search feature, additional set-up is necessary, as described in the search feature page.

The search endpoint provides the ability to search for files across multiple sites, and aggregate the results.

Search is performed in two steps - submitting a query, and retrieving the results.

# Submitting a query

Search performs a query by submitting asynchronous tasks to each requested site. The sites then perform the actual search and return results as available.

A search is initiated by POSTing a query to the search endpoint

```
curl -s -X POST 'http://example.com/api/search/' -H 'Accept:
application/json' -H 'Content-Type: application/json' -H
"Authorization: Api-Key $TOKEN" -d '{"path": "/mmfs1/data",
"sites": ["site1"], "recursive": true, "filters": {"hsm.status":
"migrated"}}'
```

The search request payload is made of

name	description
path	Directory to query
sites	List of one or more sites to search. Default: all sites
recursive	Whether to search the path recursively. Default: false, only immediate children of path will be returned.
filters	A collection of filters against arbitrary metadata, see below. Default: None
metadata_fields	A list of metadata fields to include in search results. This can include specific field names (e.g. hsm.status), or namespace wildcards (e.g. core.*) to select all fields in a given namespace. Default: all available fields.
merge	If the same file exists on multiple site, this will cause them to be merged in the results (see below). Default: false

Upon successful submission, the request will return status 201 (Created), and a response body which includes the url for retrieving search results (see below)

```
{"id":1,"url":"http://example.com/api/search/1/"}
```

**Filters** 

Filters are a collection of filters to apply to arbitrary file metadata.

The specific metadata available to be filtered on depends on the search backend being used. The fields in the following examples may not be available for all backends.

At a minimum, one can expect to be able to filter on core.filename, the file basename. For example to filter only jpeg files, {"core.filename": "\*.jpg"}

# Possible filter types are

type	description	example
exact match	match a value exactly	<pre>{"core.filename": "cats-01. jpg"}, {"core.size": 0}</pre>
match list	match any of the values in the list (value1 OR value2 OR)	<pre>{"core.group.name": ["edito r", "admin"]}</pre>
wildcard	any string value containing an asterisk (*) is treated as a wildcard	{"core.filename", "*.jpg"}
range	combination of less- than (lt), less-than-	{"core.size": {"gt": 100000
negation	exclude anything matching a given filter	<pre>{"not": {"core.filename": " .DS_Store"}}</pre>

Filters are combined as AND, e.g. {"core.extension": ".jpg", "hsm.status": "migrated"} matches .jpg files which are HSM migrated.

### Retrieving results

When search results are read, they can be retrieved using the url returned when the query was submitted.

```
$ curl 'http://example.com/api/search/1/' -H "Authorization: Api-Key
$TOKEN"
{
    "count": 1,
    "next": null,
    "previous": null,
    "items": [
        {
             "href": "http://example.com/api/file/?
path=%2Fmmfs1%2Fdata%2Fhello.txt&site=site1",
            "site": "site1",
            "path": "/mmfs1/data",
```

```
"name": "hello.txt",
      "metadata": {
          "core.accesstime": "2021-10-12T16:27:28",
          "core.changetime" : "2021-10-12T16:28:45",
          "core.directory" : "/mmfs1/data",
          "core.extension" : ".txt",
          "core.filename" : "hello.txt",
          "core.group.id" : 0,
          "core.group.name" : "root",
          "core.hash.sha512": "db3974a97...94d2434a593",
          "core.modificationtime" : "2021-10-12T16:28:45",
          "core.pathname" "/mmfs1/data/hello.txt",
          "core.size" : 12,
          "core.user.id" : 0,
          "core.user.name" : "root",
          "gpfs.filesetname" : "root"
          "gpfs.filesystem" : "mmfs1",
          "qpfs.kballocated" : 0,
          "gpfs.poolname" : "sas1",
          "hsm.status" : "migrated"
          "ngenea.pathname" : "data/hello.txt",
          "ngenea.size" : 12,
          "ngenea.target" : "awss3",
          "ngenea.uuid": "acf1a307-5b6a-43b0-8fb2-d2b366e88008",
      },
      "proxies": {
          " thumbnail": "/media/123/456/789/123456789012345.png"
      }
    }
  "metadata fields": ["core.accesstime", ...],
  "complete": true,
  "errors": {"site2": "Search backend is offline"}
}
```

Results from different sites may not arrive at the same time. The complete field indicates whether all sites what returned their results. This includes when a site returns with an error.

Results from different sites are 'concatenated', meaning if the same file exists on multiple sites, there will be separate result items for the file for each site.

The metadata field on each item contains arbitrary file metadata. The specific metadata will vary depending on the search backend being used. In the case of the PixStor Search backend, the available fields will vary depending on file type, and which plugins were used when the files were ingested.

If metadata\_fields was specified when the query was submitted, the metadata\_fields entry in the response will match, with any wildcards expanded to list the avilable fields which match those wildcards. Otherwise, the metadata\_fields entry will list all the available metadata fields which could be returned from the search backend. Individual files may not have all the listed fields.

All search backends format results to be namespaced, similar to PixStor Search, for consistency.

If an error occurs while performing the search on any of the sites, the errors entries will provide a mapping of site names and error messages.

### **Proxies**

The proxies field on each item contains links to proxies of the file, such as thumbnails and previews.

These will only be available if the backend is pixstor\_search, and PixStor Search itself has been configured and ingested in 'search plus' mode.

The links are relative urls, which must be combined with the public\_url from the corresponding /sites endpoint to fetch the actual proxy files, e.g. https://pixstor-sitel/media/...

Typical proxies may include:

- thumbnail a 150x150 px thumbnail image
- image.preview a 400x300 px preview image
- video.preview a 400x300 px, lower resolution version of a video
- audio.preview a downscaled version of an audio file

Proxies may not be available for all file types, depending on which search plugins have been enabled and ingested.

### **Parameters**

Search results are paginated. The following parameters can be used to control what results are returned

name	description
page	Numbered page of results to fetch. Default: 1
page_size	Maximum number of results to return per page. Default: 20
sort	One or more fields to sort results on, separated by commas, e.g. ? sort=name,site. Field names can be prefixed with - to reverse order. For fields in metadata, the field name is specified as is, e.g. ?sort=core.accesstime. Default: arbitrary order.
group_by_name	When this url parameter is 'true' results are merged based on matching name, e.g. ?group_by_name=true

### Merged results

When a search is submitted with "merge": true, the search results will be 'merged'.

This means that entries for matching files from different sites will be combine. An entry is considered to be matching if it has the same full path.

```
$ curl 'http://example.com/api/search/2/' -H "Authorization: Api-Key
$TOKEN"
{
  "count": 1,
  "next": null,
  "previous": null,
  "items": [
   {
      "path": "/mmfs1/data",
      "name": "hello.txt",
      "metadata": {
          "core.accesstime": "2021-10-12T16:27:28",
          "core.changetime" : "2021-10-12T16:28:45",
          "core.directory" : "/mmfs1/data",
          "core.extension" : ".txt",
          "core.filename" : "hello.txt",
          "core.group.id" : 0,
          "core.group.name" "root",
          "core.hash.sha512": "db3974a97...94d2434a593",
          "core.modificationtime": "2021-10-12T16:28:45",
          "core.pathname": "/mmfs1/data/hello.txt",
          "core.size": 12,
          "core.user.id" : 0,
          "core.user.name" : "root",
          "gpfs.filesetname" : "root",
          "qpfs.filesystem" : "mmfs1",
          "gpfs.kballocated" : 0,
          "gpfs.poolname" : "sas1",
          "hsm.status" : "migrated"
          "ngenea.pathname" : "data/hello.txt",
          "ngenea.size" : 12,
          "ngenea.target" : "awss3",
          "ngenea.uuid": "acf1a307-5b6a-43b0-8fb2-d2b366e88008",
      },
      "status": {
         "site1": true,
         "site2": false
      }
   }
  "metadata fields": ["core.accesstime", ...],
  "complete": true
```

Merged results no longer have the site and href fields. In their place is a status field, which maps sites to whether the file is 'resident' on that site.

A file is considered resident if the file is not migrated, or is premigrated ('hydrated'). A file is considered not resident if the file is migrated (stubbed), or not present at all.

Results grouped by name

To group search results by name, add the url parameter group\_by\_name=true.

This will return results from any of the requested sites. Results within a group may belong to different directories.

```
$ curl 'http://example.com/api/search/1/?group by name=true' -H
"Authorization: Api-Key $TOKEN"
  "count": 60,
  "next": "http://testserver/api/search/1/?
group by name=true&page=2",
  "previous": "http://testserver/api/search/1/?group by name=true",
  "more results": false,
  "items": [
    {"test-10": [
      {
        "site": "testsite",
        "path" "/mmfs1/data",
        "metadata": { ...}
      },
        "site": "anothersite",
        "metadata": { ...}
    ]
    },
    {"test-11": [
      {
        "site": "testsite",
        "path": "/mmfs1/data",
        "metadata": { ... }
      },
        "site": "anothersite",
        "path": "/mmfs1/archive",
        "metadata": {     }
      }
    },
    {"test-19": [
        "site": "testsite",
        "path": "/mmfs1/data",
        "metadata": { ...}
      },
        "site": "anothersite",
        "path": "/mmfs1/data",
```

```
"metadata": {...}
     },
     ...
]

},
"complete": true,
"metadata_fields": null,
"errors": {}
}
```

#### Max Results

There is a hard limit on the number of results returned, per site. By default, each site will return, at most, 200 results.

Fetching a lot of results makes queries slower and, since results are stored in the DB, storing more results uses more space. One the other hand, the limiting may lead to some matches not being returned.

The maximum number of results per site is controlled by the search\_max\_results configuration - see Configuration for more info.

Result limiting is applied when the search query is submitted, not when results are retrieved. If you change search\_max\_results, you will need to resubmit your query to fetch any additional matches.

Note, some backends have a hard limit of 10,000 results.

# Housekeeping

The results from a query are stored, so they can be retrieved multiple times without performing a new query.

However, over time, the files on each site will change, and the stored results may no longer accurately reflect the active file system.

Therefore, old results are periodically culled. The housekeeping process runs once a day, and removes results for any search which was submitted more than a week ago (by default). A different 'time-to-live' (TTL) can be set using the search\_result\_ttl configuration - see Configuration for more information.

Results can also be manually removed by performing a DELETE request against the given search result endpoint

```
curl -X DELETE 'http://example.com/api/search/1/' -H "Authorization:
Api-Key $TOKEN"
```

# Controlling Bandwidth Usage

Ngenea Hub can control the amount of traffic speed for each node within each site that processes files through Ngenea. This will limit both outgoing and incoming traffic with defined cloud services.

# Enabling the bandwidth feature in the UI

Regardless of enabling this feature, it is possible to change the bandwidth via REST and will enable changing of bandwidth when the Site instance has its bandwidth attribute changed.

This can be enabled by enabling the feature flag, details on how to do this can be found on the Feature Flags page.

This will enable the UI within the Site details page and represents the bandwidth limit in Mb/s.

# Checking Node status

Each site within Ngenea Hub is the collection of all nodes running an instance of Ngenea Worker using the name of a given site. These are nodes within a cluster that are collectively listening to the same queue for a given site. Each time any worker comes online on a new node or a known node, this is tracked within Ngenea Hub using Node objects. These are automatically created when first starting up a worker, after creation their online status can be monitored.

You can view the nodes for each site within /api/nodes/ this will be a complete list of all nodes known to Ngenea Hub.

For bandwidth control, there will need to be existing nodes known to Ngenea Hub, otherwise the bandwidth rules cannot be applied. If your worker coming online was not tracked due to timing issues, you can manually scan for existing nodes using one of the Actions.

### Registering Datastores

In order to control the bandwidth for all nodes under a site, the site will need to have the Ngenea policy targets defined as Datastore instances within Ngenea Hub.

The following example is for defining an AWS S3 target for Ngenea within Ngenea Hub:

```
"name": "site1_amazon",
   "type": "S3",
   "bucket": "bucket01",
   "secretaccesskey": "secret-key",
   "accesskey": "access-key"
}
```

With this established datastore, all that is left to do is link the created datastore to a site so that when a change in bandwidth is applied, the site knows what service to limit the traffic to.

### Cloud IPAddresses

Each datastore that points to a cloud target will have access to a list of all known IP addresses that are associated with that specific service. This will be used to limit all traffic between those IP ranges and the nodes currently running a worker instance when a bandwidth limit is applied.

These IP ranges are updated internally once a day in a scheduled task.

# Using manual IP addresses

Manual IP addresses can be used to override the list of cloud related IPs, this can be useful to control bandwidth to custom endpoint targets such as services like minio making use of POST api/ipaddresses/. Using the following example to add an address to the list of IPAddresses:

**Note:** This will disable the use of all cloud addresses for a datastore and will instead only use the custom IP addresses.

```
{
    "ipaddr": "208.65.153.237",
    "datastore": 1
}
```

This will ensure that all traffic between those nodes and the defined IP addresses will be limited to the max bandwidth limit

# Linking a Datastore to a Site

With our example site site1 creating a SiteLink between site1 and the datastore site1\_amazon allows the bandwidth to be applied to all S3 targets on all nodes that are running the Ngenea Worker service.

For this example all local data for this Ngenea is located in /mmfs1/data/aws\_data with data being placing data in the bucket bucket01 under aws data/.

The following SiteLink can be used to represent this:

```
"site": "site1",
   "datastore": "site1_amazon",
   "site_path": "/mmfs1/data/aws_data/",
   "datastore_path": "aws_data/"
}
```

This will ensure that each Node under site1 will limit its traffic to all related addresses.

# Applying the bandwidth

**Note:** This will effect all traffic on each node running a worker to the cloud services defined with the sites linked datastores.

With the SiteLink in place, changing the bandwidth attribute to the Mb/s desire on the site instance via the API route PATCH /api/site/{id}:

```
{
    "bandwidth": 1000
}
```

Using this or the UI, this will cause the hub to signal the worker to limit traffic using the IP ranges defined for the datastores.

This total bandwidth will be divided between all nodes for any given site, so if a site has a bandwidth of 1Gb/s then both nodes will be limited to 500mb/s.

# Configuration

# **Global Configurations**

Some configurations are stored in the Ngenea Hub configuration file, as described in Hub Configuration. These are generally static, or sensitive settings. Changes to these settings require a service restart.

In addition, there are configurations which can be changed on-the-fly, typically to change Ngenea Hub behaviour. These settings can be viewed and changed via the REST API, as described below.

# Available Settings

Name	Description	Default
jobs_ttl	How long job details should be stored after job completion, in days.	90
search_backend	Backend to use when performing searches. Currently supported backends: analytics, pixstor_search.	pixstor_se
search_result_ttl	How long search results should be stored, in days.	7
search_max_results	Maximum number of search results to fetch from the search backend, per site. Fetching more results will make queries slower and will require more storage space. Fetching fewer results may lead to some files being missing. Note, some backends have a hard limit of 10,000 results.	200

Name	Description	Default
snapshot_create_delete_retry_timeout	Time in seconds after which workers will give up retrying snapshot create and delete operations. These occur in the dynamo.tasks.snapdiff and dynamo.tasks.rotate_snapshot tasks. The default 1000s will give 4 or more retries. Set to 0 to disable retries.	1000
stat_timeout	How long to wait for results from the /api/file/ endpoint, in seconds.	10
stat_refresh_period	How long a files details will be retained as a cache within the file browser, in seconds.	10
task_invalidation_timeout	How long in minutes for a task in the STARTED state will wait before being invalidated.	360
snapdiff_stream_timeout	Idle timeout when waiting for delete and move tasks to complete during snapdiff workflows, in minutes.	10
force_local_managed_users	Allow local NAS users to be managed on AD joined sites.	False
custom_statistics_tasks	A list containing the names of custom tasks that add their number of reported files to the job total, it will do so regardless of when these tasks are executed within a workflow.	["dynamo.c "dynamo.cu

**Note:** If the file details are not returned for large fileset, increase the default value of stat\_refresh\_period in the configuration tab of hub admin page http://:/ admin or do a patch on configuration API.

### **REST API**

Configurations can be listed and set via the Ngenea Hub REST API.

**Note:** The configurations endpoint does not support client key authentication. You must use JWT Authentication.

To list the current configuration settings,

```
$ curl -s 'http://example.com/api/configurations/' -H 'Accept:
application/json' -H "Authorization: Bearer $JWT_ACCESS_TOKEN"
{
    "search_backend": "analytics",
    "search_max_results": 200,
    "search_result_ttl": 7,
    ...
}
```

To change one or more configuration settings, make a PATCH request the same endpoint

```
$ curl -s -X PATCH 'http://example.com/api/configurations/' -H
'Accept: application/json' -H "Authorization: Bearer
$JWT_ACCESS_TOKEN" -H 'Content-Type: application/json' -d
'{"search_max_results": 500}'
{
    "search_max_results": 500,
    ...
}
```

# **Settings Migration**

In versions 1.9.0 and earlier, some of the above settings were configured via the Ngenea Hub config file (Hub Configuration).

Upon updating to version 1.10.0 or above, any values currently set in that config file will be captured. Thereafter, any changes to those settings within the config file will be ignored.

# Site-specific Configurations

Some configuration options can be set on a per-site level, and may differ between sites.

These can be viewed and changed via the REST API, as described below. They can also be viewed and changed in the Ngenea Hub UI, from the 'Sites' tab on the Administration page.

### **Available Settings**

Name	Description	Default
bandwidth	Limit the bandwidth for the site (In MB/s). In the UI, it is hidden behind the bandwidth_controls feature flag (see Feature Flags)	not set (unlimited)
elasticsearch_url	URL used to interact with Elasticsearch when search_backend is set to analytics (see <b>Global Configurations</b> above). The URL is evaluated on the node(s) on which the site worker is running.	localhost: 9200
pixstor_search_url	URL used to interact with PixStor Search when search_backend is set to pixstor_search (see <b>Global Configurations</b> above). The URL is evaluated on the node(s) on which the site worker is running.	https:// localhost/
public_url	Public URL that can be used to reach this site. Typically this will be the hostname or external IP address of the site management node.	not set
file_batch_gb		1

Name	Description	Default
	Limit the total size of file data in a batch, in gigabytes. See <b>File Batching</b> below	
file_batch_size	Limit the total number of files in a batch. See <b>File Batching</b> below	40
lock_threshold	The snapdiff discovery uses locking to prevent multiple snapdiff running against the same fileset at once. To prevent stale locks, lock are considered 'expired' after the lock_threshold, given in seconds.	86400 (one day)
include	A list of include glob patterns which will apply to all workflows run against this site	not set
exclude	A list of exclude glob patterns which will apply to all workflows run against this site	not set

# File Batching

The file list generated by discovery tasks may be broken into smaller batches before passing them to workflow steps.

This makes the overall job execution more granular. Individual tasks will be smaller and faster. This also makes it easier to cancel a job, given that only PENDING tasks can be cancelled.

On the other hand, if the batching is too small, the large number of tasks generated may saturate the job queue, blocking out tasks from other jobs.

File batching is based on both file\_batch\_gb and file\_batch\_size. Whichever limit results in a smaller batch is the one which is used. For example, given 100 files of 500MB each, a file\_batch\_gb of 1 and file\_batch\_size of 10 will result in 50 batches of 2 files each (1GB total per batch), because 1GB (2 files) is smaller than 10 files (5GB).

### REST API

Configurations can be listed and set via the Ngenea Hub REST API.

The sites endpoint supports client key authentication

To list the current site configuration settings,

```
$ curl -s 'http://example.com/api/sites/1/' -H 'Accept: application/
json' -H "Authorization: Api-Key $APIKEY"
{
    "name": "site1",
    "elasticsearch_url": "localhost:19200",
    "file_batch_size": 100,
    ...
}
```

Note - configurations are only included when fetching a specific site, not when listing all sites.

To change one or more configuration settings, make a PATCH request the same endpoint

```
$ curl -s -X PATCH 'http://example.com/api/sites/1/' -H 'Accept:
application/json' -H "Authorization: Api-Key $APIKEY" -H 'Content-
Type: application/json' -d '{"file_batch_gb": 5}'
{
    "file_batch_gb": 5,
    ...
}
```

# Feature Flags

Feature flags control whether selected pre-release features are enabled.

Certain features may be included in a release which aren't yet fully implemented, or fully tested. By default, these features are disabled and 'hidden', so should not affect normal functionality.

However, these features may be enabled on a 'preview' basis, on the understanding that they may be incomplete or unstable.

**Warning: Do not** enable preview features unless you are willing to accept the potential risks.

Once a feature is finalised and stable, it will be released officially, and the corresponding feature flag will be removed.

### **Available Features**

The following features are currently available.

name	description	stability	default
searchui	Enable search features in the Ngenea Hub UI	stable	True
bandwidth_controls	Enable bandwidth controls in the Ngenea Hub UI	stable	True

### **REST API**

Features can be listed, enabled, or disabled via the Ngenea Hub REST API.

To list the available features, and whether they're currently enabled

```
$ curl -s 'http://example.com/api/features/' -H 'Accept:
application/json' -H "Authorization: Api-Key $TOKEN"
{
    "count": 1,
```

Individual features are keyed by their name, e.g. http://example.com/api/ features/searchui/

To enable a feature, make a PATCH request against the desired feature

And similarly, to disable a feature

```
curl -s -X PATCH 'http://example.com/api/features/searchui/' -H
'Accept: application/json' -H "Authorization: Api-Key $TOKEN" -H
'Content-Type: application/json' -d '{"enabled": false}'
```

**Note:** It may be necessary to restart the Ngenea Hub service for a feature change to take effect.

### ngclient

Alternatively, feature flags can be interacted with using ngclient.

To list available features and whether they're currently enabled

To enable a feature

```
ngclient features enable bandwidth_controls
```

And to disable a feature

```
ngclient features disable bandwidth_controls
```

See ngclient features for more information.

### Actions

Actions allow administrative users to perform certain operations, as described below.

### **Available Actions**

discover nodes

Ngenea Hub monitors for when new nodes come online.

The discover\_nodes action can be used to manually scan for nodes. This may be necessary if a node was previously manually removed from Ngenea Hub

This action takes no arguments.

### **REST API**

Actions are submitted via the /api/actions/ endpoint, and typically execute asynchronously. The state of the action can be viewed via the same endpoint.

**Note:** The actions endpoint does not support client key authentication. You must use JWT Authentication.

To submit an action, make a POST request against the /api/actions/ endpoint

```
$ curl -s -X POST 'http://example.com/api/actions/' -H 'Accept:
application/json' -H "Authorization: Bearer $JWT_ACCESS_TOKEN" -H
'Content-Type: application/json' -d '{"action": "discover_nodes"}'
{
    "id": 12345,
    ...
}
```

This returns a unique id, which can be used to check the status and results of the action

```
$ curl -s 'http://example.com/api/actions/12345/' -H 'Accept:
application/json' -H "Authorization: Bearer $JWT_ACCESS_TOKEN"
{
    "action": "discover_nodes",
    "user": "myuser",
    "state": "SUCCESS"
    "results": {...}
}
```

# Limitations

# Site Sync

Site Sync must only be used in one direction

The intent of site\_sync is for one source site to synchronise all required changes to any amount of destination sites and not consider the state of the destination site(s). Site Sync must only be utilised when data is required to be synchronised without concern for any active changes on destination site(s).

Site Sync only considers changes within an applicable time window for synchronisation

Synchronisation is not 'event driven'. Changes are collated within a window of time (defined by the associated schedule), and sent as a group.

The order in which certain events occurred cannot be determined. For example; delete determination; where no data point exists to determine the 'change time' [ctime] of a file or directory due to deletion prior to the sync time window.

During bidirectional synchronisation, when conflicting create/modify and delete events occur for files, the create/modify event takes precedence over the delete event to prevent data loss. In such scenarios, a newer version of the file which was prior deleted will be present after synchronisation. Directory behaviour is not affected.

Site Sync supports Independent Filesets

Site Sync methodology is incompatible with any requirement to synchronise an entire file system, nor is use of Dependent Filesets, or arbitrary directory trees supported.

Destination site Independent Filesets must exist prior to synchronisation

Site Sync does not create Independent Filesets on destination site(s) prior to synchronisation. Destination Independent Fileset creation is an administrative function and must be undertaken prior to configuration and operation of a Site Sync methodology to the destination site.

Directory deletion is not supported

Site sync does not support directory deletion. Deletion of a large file tree structure on a source site will delete files within the directory structure, resulting in an empty directory tree on the destination site.

# Bidirectional Site Sync

Bidirectional Site Sync implements eventual consistency

Site Sync adheres to the principle of eventual consistency whereby one or more subsequent Site Sync jobs or tasks are required to be enacted for source and destination sites to be in sync . Prior to all required Site Sync jobs enacting the synchronisation status is viewed as partially synchronised. Each subsequent job increases the totality of synchronisation.

Data which has failed to be synchronised in prior synchronisations is placed into subsequent synchronisation runs, leading to eventual consistency.

Bidirectional Site Sync is only supported via schedules

Ref: Schedules

A bidirectional Site Sync is created via defining a schedule using the bidirectional\_snapdiff discovery and subscribing the bidirectional\_sync workflow to the schedule.

A path may only be managed by one schedule per site, and at most one workflow may be subscribed to a bidirectional snapdiff schedule.

Hub does not support multiple bidirectional synchronisation with the same source site for the same Independent Fileset (E.G. between site1 and site2, and between site1 and site3).

The bidirectional\_snapdiff discovery causes all iterative Independent Fileset changes to be tracked. Identified changes are compared to across iterative runs. When both sets of changes have been evaluated, only appropriately valid changes are synchronised to the destination site.

Bidirectional synchronisation is sequential

When setting up a bidirectional site sync 'site1' is the site which is configured when creating the schedule, and 'site2' is the site configured as the destinationsite when subscribing the workflow to the schedule.

A bidirectional site sync will first synchronise changes from site1 to site2, and then from site2 to site1.

A failure while synchronising site1 to site2 will not block the reverse direction sync from enacting.

The sequential nature of synchronisation ensures conflict situations where the synchronisation from site2 to site1 wins by virtue of the last write [most recent write at any site] of a file taking precedence.

Swapping files / Last write wins

Synchronisation of a set of file moves whereby the actions include synchronisation determination of the paths of two files being swapped is complex and can result in conflicts. Where identical file paths exist at the destination site, file moves will fail rather than overwriting the existing files.

Manual intervention is required before a synchronisation will again succeed. N.B.: the replaying of the swap of the files on the destination site is not sufficient to resolve the conflict.

Renaming or deleting files and directories causes re-sending of data

Where a file is moved on site1 and the same file is deleted on site2 during an active synchronisation, the moved file from site1 will be resent to site2. This behaviour will be observed even if the delete event occurred later chronologically.

Renaming or files and directories on both bidirectional Site Sync sites causes duplication of data

This behaviour is observed when a file or directory is moved on both sites to different locations during an active synchronisation. E.G.:

- /mmfs1/data/path1 is moved to /mmfs1/data/path2 on site1
- /mmfs1/data/path1 is moved to /mmfs1/data/path3 on site2

This scenario results in duplicate data at both sites in both /mmfs1/data/path2 and /mmfs1/data/path3.

Creation or deletion of empty directories on site 1 does not synchronise to site 2

Site Sync does not perform deletions of empty directories on a destination site and does not create empty directories on a destination site.

# Troubleshooting

This section outlines steps for troubleshooting issues with Ngenea Hub

### Service Status

To check the status of Ngenea Hub and its individual services

ngeneahubctl status

To check the status of Ngenea Worker

systemctl status ngenea-worker

# Service Logs

The full logs for Ngenea Hub can be viewed with

journalctl -u ngeneahub

journalctl -u ngenea-worker

# **Specific Features**

# Site Sync

Site sync - both one-way and bidirectional - may fail due to conflicts which cannot be automatically resolved. This page outlines options for intervening to resolve such conflicts.

**Snapshot Rotation** 

By default, snapdiff snapshots will always rotate, even if an error occurs during sync.

Traditionally, snapshots are rolled-back on error. However, this can lead to changes being replayed inappropriately, leading to further errors and conflicts. Because of this, the default behaviour was changed to always rotate.

The downside to this approach is that some changes may be missed by sync. For example, if an network issues prevent a file from being synced, that file will not be re-synced unless or until it changes again. Note, however, there are retries within a sync run to mitigate such temporary issues.

If a sync job does fail, it will be necessary to determine the source of the error and manually resolve any issues. The job details will report on which paths failed overall. Looking at the individual task details will give more information on where and why a specific path failed.

To disable this behaviour, so that snapshots will rollback on error, set the runtime field snapdiff rotate on error to False

**Note:** If the sync is run within a schedule, it will use the first subscribed workflow's snapdiff\_rotate\_on\_error value. This does not apply to bidirectional sync as it can only have one subscribed workflow.

### Manual Resolution

In some cases it is possible to resolve conflicts by manually applying changes.

For example, if a file is moved on site A and deleted on site B, sync will fail because there is no file to move (or delete, depending on the sync direction) on the target site. In this case, maunally deleting the file on site A, or re-sending the file (in its new location) onto site B will resolve the conflict. Thereafter, sync will be able to run without issue.

Re-sync all

Another option is to re-sync everything from scratch. This is the safest option, as it ensures that no file changes are lost.

Note that sync will skip any files which are already in the correct state, so a re-sync won't take as long as syncing to a brand new target.

Snapdiff-based sync uses filesystem snapshots to track file changes over time. The snapdiff discovery uses a 'last snap' file to record the last snapshot which was successfully synced.

This last snap file is located at /mmfs1/.rotate/ngenea-worker.lastsnap.name.<fileset name>.id.<fileset id>

By removing the last snap file, the next sync run will behave as if it has not been run before, and so will sync everything. Once sync has run successfully, you can safely delete the snapshot which was previously recorded in the last snap file (before that file was deleted).

### Force rotate

The riskiest option is to force a snapshot rotation. This effectively says that you don't care about the current failure and just want the sync to move on.

As discussed above, this is the default behaviour. Note that this may result in some file changes not being synced. For a safer option, see **Re-sync all** above.

The following steps can be used as a one-off when the default rotate-on-error function has been disabled.

To force a rotate, you should first temporarily disable sync. This can be done by setting the sync schedule to disabled in the Ngenea Hub UI.

Next, create a new snapshot of the fileset. The name is expected to be of the form ngenea-worker.snapdiff.<timestamp>.

Update the 'last snap' file (described above), replacing the currently recorded snapshot name with the name of the new snapshot you just created.

This last snap file is located at /mmfs1/.rotate/ngenea-worker.lastsnap.name.<fileset name>.id.<fileset id>

Finally, re-enable sync. Sync will now pick up new file changes starting from the point at which the new snapshot was created.

Once sync has run successfully, you can safely delete the snapshot which was previously recorded in the last snap file (before that file was updated).

# **Locking Errors**

Lock files are used to ensure that a sync for a given fileset will not run if one is already running.

In this case, any new sync job will fail, and under the snapdiff task details, you will see an error like

SnapdiffLockError: Could not perform snapdiff as one is currently running for provided fileset

Under rare circumstances, a lock may not be correctly cleaned up, preventing syncs from running, even though there are none currently active.

In that case, the lock file can be removed manually. First, ensure there there aren't any syncs running. For extra safety, temporarily disable any scheduled syncs.

The lock file is located at /mmfs1/.rotate/ snapdiff.name.<fileset name>.id.<fileset id>.lock

Any snapdiff lock file will automatically expire after 24 hours by default. The lifetime can be changed using the lock threshold site setting

# Reference

# **Default Workflows**

This section documents all the workflows which come installed in Ngenea Hub by default. See Custom Workflows for guidance on how to create your own workflows.

### migrate

Migrate one or more files from a site.

**discovery**: recursive

### steps:

dynamo.tasks.migrate

### fields:

 lock\_level (choice): Filesystem locking level for ngenea operations. One of: partial, implicit. Default=partial

# premigrate

Premigrate one or more files from a site.

**discovery**: recursive

### steps:

dynamo.tasks.migrate

∘ premigrate: True

### fields:

 lock\_level (choice): Filesystem locking level for ngenea operations. One of: partial, implicit. Default=inplicit

### recall

Recall one or more files on to a site.

discovery: recursive

### steps:

• dynamo.tasks.recall

### fields:

 lock\_level (choice): Filesystem locking level for ngenea operations. One of: partial, implicit. Default=inplicit

#### send

Send files from one site to another via cloud storage.

**discovery**: recursive

# steps:

- dynamo.tasks.remove\_location\_xattrs\_for\_moved
- dynamo.tasks.migrate
  - ∘ premigrate: True
- dynamo.tasks.reverse\_stub

### fields:

- destinationsite (string): site to send files to
- hydrate (bool): hydrate files on the destination site

### site sync

Sync a fileset from one site to another via cloud storage.

The snapdiff discovery looks for changes within the fileset on the source site since the last time the workflow was invoked. These changes are then synced to the destination site.

The workflow should be invoked with a single path which is the link point of the independent fileset to be synced.

discovery: snapdiff

### fields:

- destinationsite (string): site to sync changes to
- sync\_preference (string): determines how conflicts should be resolved on the remote site. One of: newest, local, ignore

### created

Files with state created are sent to the destination site, subject to sync preference

# steps:

- dynamo.tasks.remove location xattrs for moved
- dynamo.tasks.migrate
  - ∘ premigrate: True
  - ∘ overwrite: True
  - abort\_missing: True
- dynamo.tasks.reverse stub
  - ∘ overwrite: True

# updated

Files with state updated are sent to the destination site, subject to sync preference

# steps:

- dynamo.tasks.check sync state
- dynamo.tasks.remove\_location\_xattrs\_for\_moved
- dynamo.tasks.migrate
  - ∘ premigrate: True
  - ∘ overwrite: True
  - ∘ abort missing: True
- dynamo.tasks.reverse stub
  - ∘ overwrite: True

# moved

Files with state moved are moved 'in-place' on the destination site

### steps:

dynamo.tasks.move paths on gpfs

### deleted

Files with state deleted are removed on the destination site

### steps:

dynamo.tasks.delete paths from gpfs

# Hidden Workflows

This section documents all the workflows which come installed in Ngenea Hub by default that are not provided in the UI. Some of these are intended for advanced users making use of the API, and some are used for GPFS policy automation.

### transparent recall

This is the workflow that will be performed on dehydrated files on the system when accessed, if the policy is configured to make use of Ngenea Hub within its Transparent Recall policy.

Typically, all of these Transparent Recalls are placed into a single job within Ngenea Hub.

# steps:

- dynamo.tasks.recall
  - o lock\_level: "partial"

# reverse stub

This workflow is designed to create stubs files or fully hydrated files using remote content on a given site without the need for an existing file on the site for a given path. Due to this requiring the data to be within the cloud and not present on the filesystem, it requires the paths to target cloud targets through the API.

### steps:

dynamo.tasks.reverse stub

### fields:

- hydrate (bool): If the file should be fully hydrated during the recall operation
- overwrite (bool): If the operation should overwrite a local file that already exists

### delete file

This workflow deletes one or more file/folder paths from the filesystem.

### steps:

dynamo.tasks.delete paths from gpfs

### fields:

 recursive (bool): If non-empty directories should be deleted. if recursive is false additional jobs will be needed to delete empty directories. Defaults to false

# **Discovery Steps**

This section documents all the currently supported discovery steps in Ngenea Hub. See Custom Workflows for guidance on how to use these in your own workflows.

# dynamo.tasks.recursive action - recursive

Navigates down any folder tree provided to it and actions any rule defined with all as its type and state on all found files.

Argument	Туре	Default	Description	
skip_missing	bool	False	Allows the processing of any files directly provided to the discovery step regardless of it being on the filesystem.	

# dynamo.tasks.snapdiff - snapdiff

For use only with a GPFS Independent Fileset, it will create a GPFS snapshot and it will then process the list of differences between the time of the initial run and subsequent runs. On the first run of this, it will ingest all the files within that Fileset.

Argument	Туре	Default	Description
skip_old_ctimes	bool	False	Skips any files within the snapdiff difference list if the ctime of the file is older than the oldest snapshot.
condense_moves	bool	True	If a directory is moved, this will condense all the move operations into a single operation for move based tasks, otherwise it will action against every effected file.

# **Workflow Steps**

This section documents all the currently supported steps in Ngenea Hub. See Custom Workflows for guidance on how to use these steps in your own workflows.

# dynamo.tasks.migrate

Migrates a list of files to a pre-defined remote target using Ngenea.

Argument	Туре	Default	Description
premigrate	bool	False	retain the content of every migrated file and do not set the OFFLINE flag for the file.migrating.
stub_size	int	0	retain a segment of every migrated file starting from its beginning and having a specified approximate length in bytes.
overwrite	bool	False	

Argument	Туре	Default	Description
			overwrite remote objects if they already existdo not create remote object instances with various UUID suffixes
fail_on_mismatch	bool	False	fail a file migration if a remote object exists but has different hash or metadata. In that case, the task errors
lock_level	string	implicit	Defined the locking mode that ngenea will use when performing the migrate
endpoint	string		specify the endpoint to migrate
abort_missing	bool	False	allow the migrate task to make any missing files end up in the "aborted" state instead of "failed"

# dynamo.tasks.recall

Recalls a list of files to a pre-defined remote target using Ngenea.

Туре	Default	Description
bool	False	If the recall should skip checking the hash of the file
string		specify which endpoint(site) to recall from
string	partial	Defines the locking level ngenea will use during the recall
string		When a file is recalled, it uses this UID if one is not set on the remote object
string		When a file is recalled, it uses this GID if one is not set on the remote object
bool	false	When a files is recalled, update its access time (atime) to 'now'
bool	false	When a files is recalled, update its modification time (mtime) to 'now'
bool	false	If set, when a file is recalled, it deletes the file in the remote location
	bool string string string bool bool	bool False string string partial string string bool false bool false

# dynamo.tasks.reverse\_stub

Recalls a list of files to a pre-defined remote target using Ngenea.

Argument	Туре	Default	Description
hydrate	bool	False	If the file should be premigrated instead of a regular stub
stub_size	int	0	The max file size before files will be stubbed for this task
skip_hash	bool	False	If the recall should skip checking the hash of the file
overwrite	bool	False	

Argument	Туре	Default	Description
			Overwrite local files if they already exist, except files with only metadata changes.
endpoint	string		specify which endpoint(site) to recall from.
retry_stale	string	None	Controls if the worker should attempt to retry file failures due to stale file handles. This string can be either stub for only removing reverse stubbed files or all.
lock_level	string	implicit	Defines the locking level ngenea will use during the recall
default_uid	string		When a file is recalled, it uses this UID if one is not set on the remote object
default_gid	string		When a file is recalled, it uses this GID if one is not set on the remote object
update_atime	bool	false	When a files is recalled, update its access time (atime) to 'now'
update_mtime	bool	false	When a files is recalled, update its modification time (mtime) to 'now'
conflict_preference	string	None	Dictates what state the local file should be to pass the check. Options are "newest" which passes if the local file is the latest version of the file on either site, "local" which accepts the local file version regardless of the check and "ignore" which always uses the other sites file version.

# dynamo.tasks.ngenea\_sync\_metadata

Sync the local ngenea metadata on a file with the remote target using Ngenea.

Argument	Туре	Default	Description
skip_hash	bool	False	If the sync should skip checking the hash of the file
endpoint	string		Specify which endpoint(site) to recall from
default_uid	string		When a file is synced, it uses this UID if one is not set on the remote object
default_gid	string		When a file is synced, it uses this GID if one is not set on the remote object

# dynamo.tasks.delete\_paths\_from\_gpfs

Removes a list of files from a GPFS filesystem.

<b>Argument</b>	Туре	Default	Description
			If any directory path is provided and this is set, it will remove the entire file tree, otherwise it will only remove empty directories. It is important to note that the recursive behaviour of removing the entire
recursive	bool	False	directory tree will not apply to filesets or if the target directory contains files or directories that are restricted from being deleted such as snapshots, in such cases the task will silently ignore those files or directories and report the task as successful.

# dynamo.tasks.check sync state

Checks a provided site against the calling sites to ensure that the local file is in a specified state compared to another site. Using this task will also perform dynamo.tasks.stat paths on the provided site before execution.

Argument	Туре	Default	Description
sync_preference	string	ignore	Dictates what state the local file should be to pass the check. Options are "newest" which passes if the local file is the latest version of the file on either site, "local" which accepts the local file version regardless of the check and "ignore" which always uses the other sites file version.
site	string		The target site to compare
abort_outdated	bool	False	If this bool is set files that do not need to be executed will be marked as aborted as opposed to skipped
hash_includes_acl	bool	False	If this bool is set the metadata comparison for directories will also compare Access Control Lists

# dynamo.tasks.move paths on gpfs

Moves files on the filesystem using provided paths with a source key.

This task moves files in two steps (via an intermediate temporary location), to avoid move conflicts (for example, this task correctly handles cases where files are 'swapped': fileA moved to fileB, and fileB moved to fileA).

Argument	Туре	Default	Description
delete_remote_xattrs	bool	False	If set, after a file has been moved all remote location xattrs will be removed
source missing signature	ison	null	A signature to send any paths to where the source is missing. If this

Argument	Type	Default	Description
			isn't set, a missing source is treated as a failure.
target_max_age	int	null	If the target file exists, it is overwritten by default. If this optional parameter is set, the target has to have a ctime <= this timestamp for the move to proceed. Otherwise, the source file is removed. Given in seconds since epoch. Primarily used for sync workflows.

# dynamo.tasks.one step move paths on gpfs

Moves files on the filesystem using provided paths with a source key.

This task is not used in the default Ngenea Hub workflows. It is less robust than dynamo.tasks.move\_paths\_on\_gpfs, because it moves files directly from source to their new location (in one step). So for example, trying to 'swap' files (fileA moved to fileB, and fileB moved to fileA) with this task will effectively result in one of these files being deleted on the target site.

However, this task is for cases where doing moves in two steps is not an acceptable option.

Argument	Туре	Default	Description
delete_remote_xattrs	bool	False	If set, after a file has been moved all remote location xattrs will be removed
source_missing_signature	json	null	A signature to send any paths to where the source is missing. If this isn't set, a missing source is treated as a failure.
target_max_age	int	null	If the target file exists, it is overwritten by default. If this optional parameter is set, the target has to have a ctime <= this timestamp for the move to proceed. Otherwise, the source file is removed. Given in seconds since epoch. Primarily used for sync workflows.

# dynamo.tasks.remove location xattrs for moved

This task removes all remote location xattrs on all provided paths.

This step takes no additional arguments.

# dynamo.tasks.move in cloud

Moves a file on the filesystem's related cloud storage platform using provided paths with a source key.

This step takes no additional arguments.

# dynamo.tasks.remove from cloud

Deletes a file on the filesystem's related cloud storage platform using provided paths.

This step takes no additional arguments.

# dynamo.tasks.ensure cloud file exists

Ensures all files provided to the task exist on the filesystem's related cloud storage platform. If some do not, it will attempt to retry this check an additional two more times before failing.

This step takes no additional arguments.

# Job States

When jobs are created on the call of a workflow, they can end up in specific state that

State	Description
Pending	The job is being populated with tasks through its discovery task and will begin when paths have been collected
Started	Some tasks within the job have started to be processed
Success	All tasks in a job have completed successfully
Failure	There was an error or failure when attempting a task within a job, meaning the job could not complete
Skipped	Based on the output of the provided discovery task, no tasks needed to be created so there is no work to
Cancelled	The job has been manually closed via request and all remaining task have been cancelled

### Task States

When jobs create tasks, after performing their action on the provided files they can end up in specific state as seen below

State	Description
Pending	This task is has been created but has not yet been picked up by a site
Started	This task is now running on site
Success	This task has completed successfully

State	Description
Failure	There was a unexpected error when attempting a task within a job, meaning the job could not complete and could not provide structured output
Error	There was a captured error when attempting a task within a job, meaning the job will not have processed all paths but has structured output of what has been completed. Any paths which were successfully processed will be handled by subsequent tasks in a task chain.
Skipped	This task has will have no work to perform so it has been automatically skipped by another task
Cancelled	Either a previous task has failed or the job has been manually cancelled, causing this task to no longer run

**Note:** Job and task states are updated asynchronously. There may be, for example, a short delay between a job/task completing and its state being reported as such.

### File States

As a file is processed by a workflow, each task reports whether the state of the file following the task. The containing job reports the state of the file after all workflow steps have completed.

A file can have any of the following states

### **Processed**

The file was successfully processed by the workflow step without issues

# Skipped

The files was not processed because it was already in the expected state, e.g. a delete was skipped because the file wasn't found, a migration was skipped because the file was already offline.

Because it is in the expected state, skipped files can be processed by subsequent tasks in the workflow.

### **Failed**

An error occurred meaning the file couldn't be processed. Because of this error, the file will not be processed by later tasks in the workflow.

The overall job will be marked as failed if it contains any failed files. Workflows which use the snapdiff discovery will be 'rolled back' in this case.

Failed files typically indicate an issue that needs to be manually resolved, such as network issues.

### **Aborted**

An error occurred meaning the file couldn't be processed. Because the file was aborted, it will not be processed by later tasks in the workflow.

The overall job is **not** marked as failed if it contains aborted files. Workflows which use the snapdiff discovery will 'rotate' in this case.

The intended use case for this state is in scheduled (recurring) jobs, where the any aborted files are expected to be successfully processed in a later run.

For example, if a file changes while it is being sent, the send will be aborted to prevent data corruption. But because the file was modified, it will be identified as modified in the next snapdiff scan and processed again; effectively retried.

### **API**

# **GET** /actions/

# **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

### **Status Codes:**

• 200 OK --

### **Response JSON Object:**

- count (integer) -- (required)
- next (string) --
- previous (string) ---
- results[].action (string) -- (required)
- results[].id (integer) -- (read only)
- results[].state (string) --

# POST /actions/

### **Request JSON Object:**

action (string) -- (required)

### **Status Codes:**

• 201 Created --

# **Response JSON Object:**

• action (string) -- (required)

# GET /actions/{id}/

### **Parameters:**

• id (string) --

# **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- action (string) -- (required)
- id (integer) -- (read only)
- results (string) -- (read only)
- state (string) --
- user (integer) --

### **GET** /alerts/

### **Query Parameters:**

- name (string) -- name
- **node** (string) -- node
- site (string) -- site
- severity (string) -- severity
- summary (string) -- summary
- timestamp (string) -- timestamp
- suppressed (string) -- suppressed

### **Status Codes:**

• 200 OK --

### **Response JSON Object:**

- [].created (string) -- Time that the alert was recorded in Hub
- [].id (integer) -- (read only)
- [].name (string) -- Name of of the alert (required)
- [].node (string) -- Hostname of the node the alert originated from
- [].severity (string) -- (required)
- [].site (string) -- (read only)
- [].summary (string) -- Summary description of the alert
- [].suppressed (boolean) -- Whether the alert is suppressed
- [].timestamp (string) -- Time when the alert was triggered (required)

# GET /alerts/{id}/

#### **Parameters:**

• id (integer) -- A unique integer value identifying this alert.

### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- created (string) -- Time that the alert was recorded in Hub
- id (integer) -- (read only)
- **name** (string) -- Name of of the alert (required)
- **node** (string) -- Hostname of the node the alert originated from
- **severity** (string) -- (required)
- **site** (string) -- (read only)
- **summary** (string) -- Summary description of the alert
- **suppressed** (boolean) -- Whether the alert is suppressed
- **timestamp** (string) -- Time when the alert was triggered (required)

# **GET** /analytics/

Retrieves list of files under given path for given site.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- path (string) -- Target directory path
- site (string) -- Site name
- children (boolean) -- Include children directories
- cache ttl (integer) -- How long the cache will last for the target path
- download (string) -- Download details as file e.g. CSV ?download=csv.

### **Status Codes:**

• 200 OK --

# GET /auth/clientkeys/

API endpoint for managing client keys

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- count (integer) -- (required)
- next (string) --
- previous (string) --
- results[].id (integer) -- (read only)
- results[].name (string) -- Name of the client key (required)
- results[].url (string) -- (read only)
- results[].user (string) -- (required)

### POST /auth/clientkeys/

API endpoint for managing client keys

#### Request JSON Object:

- api key (string) -- (read only)
- id (integer) -- (read only)
- name (string) -- Name of the client key (required)
- url (string) -- (read only)

### **Status Codes:**

201 Created ---

# **Response JSON Object:**

• api key (string) -- (read only)

- id (integer) -- (read only)
- name (string) -- Name of the client key (required)
- url (string) -- (read only)

# GET /auth/clientkeys/{id}/

API endpoint for managing client keys

#### **Parameters:**

• **id** (string) --

### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- id (integer) -- (read only)
- name (string) -- Name of the client key (required)
- **url** (string) -- (read only)
- **user** (string) -- (required)

# PATCH /auth/clientkeys/{id}/

API endpoint for managing client keys

#### **Parameters:**

• **id** (string) --

### **Request JSON Object:**

- id (integer) -- (read only)
- name (string) -- Name of the client key (required)
- **url** (string) -- (read only)
- **user** (string) -- (read only)

#### **Status Codes:**

• 200 OK --

### **Response JSON Object:**

- id (integer) -- (read only)
- name (string) -- Name of the client key (required)
- **url** (string) -- (read only)
- user (string) -- (read only)

# DELETE /auth/clientkeys/{id}/

API endpoint for managing client keys

#### **Parameters:**

• id (string) --

#### **Status Codes:**

204 No Content ---

### POST /auth/token/

### **Request ISON Object:**

- password (string) -- (required)
- username (string) -- (required)

### **Status Codes:**

201 Created ---

### **Response JSON Object:**

• password (string) -- (required)

• **username** (string) -- (required)

# GET /auth/token/publickey/

API endpoint for retrieving public key that is used for token verification.

#### **Status Codes:**

• 200 OK --

### POST /auth/token/refresh/

Takes a refresh type JSON web token and returns an access type JSON web token if the refresh token is valid.

### **Request JSON Object:**

- access (string) -- (read only)
- refresh (string) -- (required)

### **Status Codes:**

• 201 Created --

# **Response JSON Object:**

- access (string) -- (read only)
- refresh (string) -- (required)

# POST /auth/token/verify/

Verifies that the token is not expired AND the token owner exists in the database AND the token owner is an active user.

### **Request JSON Object:**

- token (string) -- (required)
- **type** (string) -- Token type e.g. access or refresh (required)

### **Status Codes:**

201 Created ---

### **Response JSON Object:**

- **token** (string) -- (required)
- **type** (string) -- Token type e.g: access or refresh (required)

### GET /configurations/

API endpoint for viewing and setting configurations.

#### **Status Codes:**

• 200 OK --

- custom\_statistics\_tasks (object) -- A list of custom tasks to be considered discovery tasks
- force\_local\_managed\_users (boolean) -- Allow NAS users to be managed on AD joined sites
- jobs\_ttl (integer) -- Time to store job details after the job completes, in days
- search backend (string) -- Search backend
- search max results (integer) -- Maximum search results
- **search\_result\_ttl** (integer) -- Maximum time to store search results in days
- **snapdiff\_stream\_timeout** (integer) -- Maximum amount of minutes to wait for task results

- snapshot\_create\_delete\_retry\_timeout (integer) -- Maximum time for workers to retry snapshot create and delete operations, in seconds
- **stat\_refresh\_period** (integer) -- Maximum time to wait for results from stat in seconds
- stat\_timeout (integer) -- Maximum time to wait for results from stat in seconds
- task\_invalidation\_timeout (integer) -- Maximum amount of minutes before a task in the STARTED state is considered invalid

# PATCH /configurations/

API endpoint for viewing and setting configurations.

### **Request JSON Object:**

- custom\_statistics\_tasks (object) -- A list of custom tasks to be considered discovery tasks
- force\_local\_managed\_users (boolean) -- Allow NAS users to be managed on AD joined sites
- jobs\_ttl (integer) -- Time to store job details after the job completes, in days
- search\_backend (string) -- Search backend
- search max results (integer) -- Maximum search results
- **search\_result\_ttl** (integer) -- Maximum time to store search results in days
- **snapdiff\_stream\_timeout** (integer) -- Maximum amount of minutes to wait for task results
- snapshot\_create\_delete\_retry\_timeout (integer) -- Maximum time for workers to retry snapshot create and delete operations, in seconds
- **stat\_refresh\_period** (integer) -- Maximum time to wait for results from stat in seconds
- **stat\_timeout** (integer) -- Maximum time to wait for results from stat in seconds
- task\_invalidation\_timeout (integer) -- Maximum amount of minutes before
   a task in the STARTED state is considered invalid

### **Status Codes:**

• 200 OK --

- custom\_statistics\_tasks (object) -- A list of custom tasks to be considered discovery tasks
- force\_local\_managed\_users (boolean) -- Allow NAS users to be managed on AD joined sites
- jobs\_ttl (integer) -- Time to store job details after the job completes, in days
- search backend (string) -- Search backend
- search max results (integer) -- Maximum search results
- search result ttl (integer) -- Maximum time to store search results in days

- snapshot\_create\_delete\_retry\_timeout (integer) -- Maximum time for workers to retry snapshot create and delete operations, in seconds
- **stat\_refresh\_period** (integer) -- Maximum time to wait for results from stat in seconds
- stat\_timeout (integer) -- Maximum time to wait for results from stat in seconds

• task\_invalidation\_timeout (integer) -- Maximum amount of minutes before a task in the STARTED state is considered invalid

### **GET** /datastores/

API endpoint for managing DataStores.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- count (integer) -- (required)
- next (string) --
- previous (string) --
- results[].accesskey (string) --
- results[].accesskeyid (string) --
- results[].bucket (string) --
- results[].container (string) --
- results[].credentialsfile (string) --
- results[].endpoint (string) --
- results[].id (integer) -- (read only)
- results[].name (string) -- DataStore Name (required)
- results[].region (string) --
- results[].secretaccesskey (string) --
- results[].storageaccount (string) --
- results[].type (string) -- Site Type (required)
- results[].url (string) -- (read only)

### POST /datastores/

API endpoint for managing DataStores.

### Request JSON Object:

- accesskey (string) --
- accesskeyid (string) ---
- bucket (string) --
- container (string) ---
- credentialsfile (string) --
- endpoint (string) --
- id (integer) -- (read only)
- name (string) -- DataStore Name (required)
- region (string) --
- secretaccesskey (string) --
- storageaccount (string) --
- **type** (string) -- Site Type (required)

• url (string) -- (read only)

## **Status Codes:**

201 Created ---

# **Response JSON Object:**

- accesskey (string) --
- accesskeyid (string) --
- bucket (string) --
- container (string) ---
- credentialsfile (string) --
- endpoint (string) --
- id (integer) -- (read only)
- name (string) -- DataStore Name (required)
- region (string) --
- secretaccesskey (string) --
- storageaccount (string) --
- **type** (string) -- Site Type (required)
- url (string) -- (read only)

# GET /datastores/{id}/

API endpoint for managing DataStores.

#### **Parameters:**

• **id** (string) --

### **Status Codes:**

• 200 OK --

### **Response JSON Object:**

- accesskey (string) ---
- accesskeyid (string) --
- bucket (string) --
- container (string) --
- credentialsfile (string) --
- endpoint (string) --
- id (integer) -- (read only)
- name (string) -- DataStore Name (required)
- region (string) --
- secretaccesskey (string) --
- storageaccount (string) --
- **type** (string) -- Site Type (required)
- url (string) -- (read only)

### PATCH /datastores/{id}/

API endpoint for managing DataStores.

### **Parameters:**

• id (string) --

### **Request JSON Object:**

- accesskey (string) ---
- accesskeyid (string) ---
- bucket (string) --
- container (string) --

- credentialsfile (string) --
- endpoint (string) --
- id (integer) -- (read only)
- name (string) -- DataStore Name (required)
- region (string) --
- secretaccesskey (string) --
- storageaccount (string) --
- **type** (string) -- Site Type (required)
- url (string) -- (read only)

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- accesskey (string) --
- accesskeyid (string) --
- bucket (string) --
- container (string) --
- credentialsfile (string) --
- endpoint (string) --
- id (integer) -- (read only)
- name (string) -- DataStore Name (required)
- region (string) --
- secretaccesskey (string) --
- storageaccount (string) --
- **type** (string) -- Site Type (required)
- url (string) -- (read only)

### DELETE /datastores/{id}/

API endpoint for managing DataStores.

#### **Parameters:**

• **id** (string) --

### **Status Codes:**

204 No Content ---

### **GET** /features/

API endpoint for managing feature flags.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

### **Status Codes:**

• 200 OK --

- count (integer) -- (required)
- next (string) --

- previous (string) --
- results[].description (string) -- Description of what the feature does (read only)
- results[].enabled (boolean) -- Whether the feature has been enabled
- results[].name (string) -- Name of the feature (read only)

# GET /features/{name}/

API endpoint for managing feature flags.

#### **Parameters:**

• name (string) --

### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- **description** (string) -- Description of what the feature does (read only)
- enabled (boolean) -- Whether the feature has been enabled
- name (string) -- Name of the feature (read only)

# PATCH /features/{name}/

API endpoint for managing feature flags.

#### **Parameters:**

• name (string) --

### **Request JSON Object:**

- **description** (string) -- Description of what the feature does (read only)
- enabled (boolean) -- Whether the feature has been enabled
- name (string) -- Name of the feature (read only)

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- **description** (string) -- Description of what the feature does (read only)
- enabled (boolean) -- Whether the feature has been enabled
- name (string) -- Name of the feature (read only)

### GET /file/

Retrieves list of files under given path for given site.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- path (string) -- Target directory path
- site (string) -- Site name
- details (boolean) -- Show details of children objects
- restricted (boolean) -- Include restricted objects
- cache ttl (integer) -- How long the cache will last for the target path

#### **Status Codes:**

• 200 OK --

### GET /file/test/

API endpoint for managing files.

#### **Status Codes:**

• 200 OK --

### POST /file/workflow/

Performs a workflow on a list of files

## Request JSON Object:

- discovery (string) -- Discovery name
- exclude[] (string) --
- fields (object) --
- ignore\_site\_excludes (boolean) --
- ignore site includes (boolean) --
- include[] (string) --
- job (integer) -- Job ID
- paths[] (object) --
- **site** (string) -- Site name (required)
- workflow (string) -- Workflow name (required)

#### **Status Codes:**

• 201 Created --

### **Response JSON Object:**

- discovery (string) -- Discovery name
- exclude[] (string) --
- fields (object) --
- ignore\_site\_excludes (boolean) --
- ignore site includes (boolean) --
- include[] (string) --
- job (integer) -- Job ID
- paths[] (object) --
- **site** (string) -- Site name (required)
- workflow (string) -- Workflow name (required)

### GET /filesets/

Retrieve list of filesets on a given site.

#### **Query Parameters:**

• **site** (string) -- Site name

#### **Status Codes:**

• 200 OK --

# GET /filestatustypes/

API endpoint for managing file status types.

### **Query Parameters:**

• **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.

• page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- count (integer) -- (required)
- next (string) --
- previous (string) ---
- results[].background\_color (string) -- (required)
- results[].key (string) -- (required)
- results[].label (string) -- (required)
- results[].text color (string) -- (required)
- results[].url (string) -- (read only)

# GET /filestatustypes/{key}/

API endpoint for managing file status types.

#### **Parameters:**

• key (string) --

#### **Status Codes:**

• 200 OK --

### **Response JSON Object:**

- background color (string) -- (required)
- **key** (string) -- (required)
- label (string) -- (required)
- **text color** (string) -- (required)
- url (string) -- (read only)

# PATCH /filestatustypes/{key}/

API endpoint for managing file status types.

#### **Parameters:**

• **key** (string) --

### **Request JSON Object:**

- background\_color (string) -- (required)
- **label** (string) -- (required)
- **text color** (string) -- (required)

### **Status Codes:**

• 200 OK --

### **Response JSON Object:**

- background color (string) -- (required)
- **label** (string) -- (required)
- **text color** (string) -- (required)

## GET /filesystems/

### **Query Parameters:**

• **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.

• page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- count (integer) -- (required)
- next (string) --
- previous (string) ---
- results[].mountpoint (string) -- Filesystem mount point (required)
- results[].name (string) -- Name of the filesystem (required)
- results[].site (string) -- Site the filesystem belongs to (required)

# GET /filesystems/{id}/

### **Parameters:**

• **id** (string) --

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- mountpoint (string) -- Filesystem mount point (required)
- name (string) -- Name of the filesystem (required)
- **site** (string) -- Site the filesystem belongs to (required)

# **GET** /groups/

API endpoint for managing groups.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

#### **Status Codes:**

• 200 OK --

- count (integer) -- (required)
- next (string) --
- previous (string) ---
- results[].description (string) -- (read only)
- results[].id (integer) -- (read only)
- results[].name (string) -- (required)
- results[].nas\_group.gid (integer) -- GID number for the user. This is automatically generated and cannot be changed. (read only)
- results[].object permissions[].model (string) -- (required)
- results[].object permissions[].object pk (string) -- (required)
- results[].object permissions[].permission (integer) -- (required)

- results[].permissions[] (integer) --
- results[].users[].date joined (string) --
- results[].users[].email (string) --
- results[].users[].first\_name (string) --
- results[].users[].last\_login (string) --
- results[].users[].last name (string) --
- results[].users[].username (string) -- Required. 150 characters or fewer. Letters, digits and @/./+/-/ only. (required)

# POST /groups/

API endpoint for managing groups.

# **Request JSON Object:**

- description (string) --
- id (integer) -- (read only)
- name (string) -- (required)
- nas group (boolean) --
- object\_permissions[].model (string) -- (required)
- object\_permissions[].object\_pk (string) -- (required)
- object\_permissions[].permission (integer) -- (required)
- permissions[] (integer) --
- users[] (string) --

#### **Status Codes:**

201 Created ---

# **Response JSON Object:**

- description (string) --
- id (integer) -- (read only)
- name (string) -- (required)
- nas group (boolean) --
- object permissions[].model (string) -- (required)
- object permissions[].object pk (string) -- (required)
- object permissions[].permission (integer) -- (required)
- permissions[] (integer) --
- users[] (string) --

# GET /groups/{id}/

API endpoint for managing groups.

### **Parameters:**

• **id** (string) --

### **Status Codes:**

• 200 OK --

- description (string) -- (read only)
- id (integer) -- (read only)
- **name** (string) -- (required)
- nas\_group.gid (integer) -- GID number for the user. This is automatically generated and cannot be changed. (read only)
- object\_permissions[].model (string) -- (required)
- object\_permissions[].object\_pk (string) -- (required)

- object permissions[].permission (integer) -- (required)
- permissions[] (integer) --
- users[].date joined (string) --
- users[].email (string) --
- users[].first name (string) --
- users[].last\_login (string) --
- users[].last name (string) --
- users[].username (string) -- Required. 150 characters or fewer. Letters, digits and @/./+/-/\_ only. (required)

# PATCH /groups/{id}/

API endpoint for managing groups.

#### **Parameters:**

• id (string) --

## **Request JSON Object:**

- description (string) --
- id (integer) -- (read only)
- name (string) -- (required)
- nas group (boolean) --
- object\_permissions[].model (string) -- (required)
- object permissions[].object pk (string) -- (required)
- object\_permissions[].permission (integer) -- (required)
- permissions[] (integer) --
- users[] (string) --

### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- description (string) --
- id (integer) -- (read only)
- name (string) -- (required)
- nas\_group (boolean) --
- object permissions[].model (string) -- (required)
- **object permissions[].object pk** (string) -- (required)
- **object permissions[].permission** (integer) -- (required)
- permissions[] (integer) --
- **users[]** (string) --

# DELETE /groups/{id}/

API endpoint for managing groups.

#### **Parameters:**

• **id** (string) --

### **Status Codes:**

• 204 No Content --

### GET /health/

#### **Status Codes:**

• 200 OK --

# GET /ipaddresses/

API endpoint for managing IP addresses.

# **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- datastore id (integer) -- Data store ID that the IP is assigned to

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- count (integer) -- (required)
- **next** (string) --
- previous (string) --
- results[].datastore.id (integer) -- (read only)
- results[].datastore.name (string) -- DataStore Name (required)
- results[].datastore.url (string) -- (read only)
- results[].id (integer) -- (read only)
- results[].ipaddr (string) -- IP Address (IPv4) (required)
- results[].url (string) -- (read only)

# POST /ipaddresses/

API endpoint for managing IP addresses.

### Request JSON Object:

- datastore (integer) -- (required)
- id (integer) -- (read only)
- **ipaddr** (string) -- (required)
- url (string) -- (read only)

#### **Status Codes:**

201 Created ---

- datastore (integer) -- (required)
- id (integer) -- (read only)
- **ipaddr** (string) -- (required)
- url (string) -- (read only)

# DELETE /ipaddresses/{id}/

API endpoint for managing IP addresses.

#### **Parameters:**

• **id** (string) --

#### **Status Codes:**

• 204 No Content --

### GET /jobs/

API endpoint for managing jobs.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- **created** (string) -- Time period string for filtering jobs by time. Leave null for displaying jobs in all times.
- **created\_time\_from** (string) -- Start time for filtering jobs by creation time in UTC. Discarded when created parameter is given.
- **created\_time\_to** (string) -- End time for filtering jobs by creation time in UTC. Discarded when created parameter is given.
- **completed\_time\_from** (string) -- Start time for filtering jobs by completion time in UTC.
- completed\_time\_to (string) -- End time for filtering jobs by completion time in UTC.

- workflow (string) -- Job workflow type
- **state** (array) -- Job states
- owner\_ids (array) -- Job owner user IDs. Send -1 for the Unknown owner.
   Send -2 for the System jobs.
- clientkey ids (array) -- Job clientkey IDs
- schedule ids (array) -- Job schedule IDs
- site (string) -- Job site name
- site id (integer) -- Job site ID
- input\_paths\_prefix (string) -- Path prefix for the job paths
- search\_keyword (string) -- Keyword to filter by
- hide noop (boolean) -- Hide successful jobs with no processed files

#### **Status Codes:**

• 200 OK --

# POST /jobs/

API endpoint for managing jobs.

### **Status Codes:**

• 201 Created --

# GET /jobs/jobtype\_choices/

Get all custom jobtypes.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

#### **Status Codes:**

• 200 OK --

# GET /jobs/recent/

Retrieves last N jobs as recent jobs. N = 5 by default (defined in dynamohub/settings/base.py).

#### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

#### **Status Codes:**

• 200 OK --

# GET /jobs/stats/

API endpoint for managing jobs.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- **created** (string) -- Time period string for filtering jobs by time. Leave null for displaying jobs in all times.
- **created\_time\_from** (string) -- Start time for filtering jobs by creation time in UTC. Discarded when created parameter is given.
- **created\_time\_to** (string) -- End time for filtering jobs by creation time in UTC. Discarded when created parameter is given.
- completed\_time\_from (string) -- Start time for filtering jobs by completion time in UTC.
- completed\_time\_to (string) -- End time for filtering jobs by completion time in UTC.
- workflow (string) -- Job workflow type
- **state** (array) -- Job states
- **owner\_ids** (array) -- Job owner user IDs. Send -1 for the Unknown owner. Send -2 for the System jobs.
- clientkey\_ids (array) -- Job clientkey IDs
- schedule\_ids (array) -- Job schedule IDs
- **site** (string) -- Job site name
- site id (integer) -- Job site ID
- input\_paths\_prefix (string) -- Path prefix for the job paths
- **search\_keyword** (string) -- Keyword to filter by
- hide noop (boolean) -- Hide successful jobs with no processed files

#### **Status Codes:**

• 200 OK --

# GET /jobs/{id}/

API endpoint for managing jobs.

#### **Parameters:**

• **id** (string) ---

## **Status Codes:**

• 200 OK --

# PATCH /jobs/{id}/

API endpoint for managing jobs.

#### **Parameters:**

• **id** (string) --

### **Status Codes:**

• 200 OK --

# DELETE /jobs/{id}/

API endpoint for managing jobs.

#### **Parameters:**

• **id** (string) --

### **Status Codes:**

204 No Content ---

# POST /jobs/{id}/cancel/

Cancels the pending and started tasks currently on the MQ for the given ID's job.

#### **Parameters:**

• **id** (string) --

### **Status Codes:**

• 201 Created --

# GET /jobs/{id}/files/

Retrieves the files related with a job, with their execution status.

#### **Parameters:**

• **id** (string) --

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- category (string) --

### **Status Codes:**

• 200 OK --

# POST /jobs/{id}/pause/

API endpoint to pause the active dag job

### **Parameters:**

• **id** (string) --

#### **Status Codes:**

• 201 Created --

# POST /jobs/{id}/resubmit/

Resubmits the job with given id. If the job is not finished yet, this action will not have an effect.

### **Parameters:**

• **id** (string) --

### **Status Codes:**

• 201 Created --

# POST /jobs/{id}/resume/

API endpoint to resume the paused dag job

#### **Parameters:**

• **id** (string) --

#### **Status Codes:**

• 201 Created --

# GET /my-permissions/

API endpoint for viewing the requesting user permissions.

### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- [].group\_object\_permissions.app\_label (string) -- (required)
- [].group object permissions.codename (string) -- (required)
- [].group\_object\_permissions.id (integer) -- (required)
- [].group\_object\_permissions.model (string) -- (required)

# GET /schedules/{id}/

### **Parameters:**

• id (string) --

### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- day\_of\_month (string) -- The day setting for the cron schedule
- day of week (string) -- The week setting for the cron schedule
- discovery (string) --
- discovery options (object) --
- enabled (boolean) -- If the schedule should be enabled
- hour (string) -- The hour setting for the cron schedule
- id (integer) -- (read only)
- managed paths (object) -- Path of managed filesystem elements
- minute (string) -- The minute setting for the cron schedule
- month\_of\_year (string) -- The month setting for the cron schedule
- name (string) -- Schedule Name (required)
- site (string) -- (required)
- url (string) -- (read only)

# PATCH /schedules/{id}/

#### **Parameters:**

• **id** (string) --

### **Request JSON Object:**

- day of month (string) -- The day setting for the cron schedule
- day of week (string) -- The week setting for the cron schedule
- discovery (string) --
- discovery\_options (object) --
- enabled (boolean) -- If the schedule should be enabled
- hour (string) -- The hour setting for the cron schedule
- id (integer) -- (read only)
- managed\_paths (object) -- Path of managed filesystem elements
- minute (string) -- The minute setting for the cron schedule
- month\_of\_year (string) -- The month setting for the cron schedule
- name (string) -- Schedule Name (required)
- **site** (string) -- (required)

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

• day\_of\_month (string) -- The day setting for the cron schedule

- day\_of\_week (string) -- The week setting for the cron schedule
- discovery (string) --
- discovery\_options (object) --
- enabled (boolean) -- If the schedule should be enabled
- hour (string) -- The hour setting for the cron schedule

- managed\_paths (object) -- Path of managed filesystem elements
- minute (string) -- The minute setting for the cron schedule
- month of year (string) -- The month setting for the cron schedule
- name (string) -- Schedule Name (required)
- site (string) -- (required)

# DELETE /schedules/{id}/

### **Parameters:**

• **id** (string) --

#### **Status Codes:**

204 No Content ---

# GET /schedules/{parent\_lookup\_schedule}/workflows/

### **Parameters:**

• parent\_lookup\_schedule (string) --

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- count (integer) -- (required)
- next (string) --
- previous (string) --
- results[].fields (object) -- Mapping of path to operation for task usage
- results[].id (integer) -- (read only)
- results[].site (string) -- (required)
- results[].url (string) -- (read only)
- results[].workflow (string) -- (required)

# POST /schedules/{parent\_lookup\_schedule}/workflows/

#### **Parameters:**

• parent\_lookup\_schedule (string) --

### **Request JSON Object:**

- **fields** (object) -- Mapping of path to operation for task usage
- id (integer) -- (read only)
- **site** (string) -- (required)
- workflow (string) -- (required)

### **Status Codes:**

• 201 Created --

## **Response JSON Object:**

- fields (object) -- Mapping of path to operation for task usage
- id (integer) -- (read only)
- **site** (string) -- (required)
- workflow (string) -- (required)

# GET /schedules/{parent\_lookup\_schedule}/workflows/{id}/

#### **Parameters:**

- parent\_lookup\_schedule (string) --
- **id** (string) --

### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- fields (object) -- Mapping of path to operation for task usage
- id (integer) -- (read only)
- **site** (string) -- (required)
- url (string) -- (read only)
- workflow (string) -- (required)

# PATCH /schedules/{parent\_lookup\_schedule}/workflows/{id}/

### **Parameters:**

- parent\_lookup\_schedule (string) --
- id (string) --

# **Request JSON Object:**

- fields (object) -- Mapping of path to operation for task usage
- id (integer) -- (read only)
- **site** (string) -- (required)
- **url** (string) -- (read only)
- workflow (string) -- (required)

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- workflow (string) -- (required)

# DELETE /schedules/{parent\_lookup\_schedule}/workflows/{id}/

#### **Parameters:**

- parent lookup schedule (string) --
- **id** (string) ---

#### **Status Codes:**

• 204 No Content --

#### POST /search/

API endpoint for file search

# **Request JSON Object:**

- filters (object) -- Metadata filters to apply to search
- merge (boolean) -- Whether matching files should be merged
- metadata fields (object) -- Available metadata fields from this search
- path (string) -- Directory to search (required)
- recursive (boolean) -- Search the target path recursively
- sites[] (string) --

### **Status Codes:**

201 Created ---

# **Response JSON Object:**

- filters (object) -- Metadata filters to apply to search
- merge (boolean) -- Whether matching files should be merged
- metadata\_fields (object) -- Available metadata fields from this search
- **path** (string) -- Directory to search (required)
- recursive (boolean) -- Search the target path recursively
- sites[] (string) --

### PATCH /search/metadata/

API endpoint for file search

### Request JSON Object:

- id (integer) -- (read only)
- url (string) -- (read only)

### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- id (integer) -- (read only)
- url (string) -- (read only)

# GET /search/metadata\_fields/

API endpoint for file search

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- count (integer) -- (required)
- next (string) ---
- previous (string) --
- results[].id (integer) -- (read only)
- results[].url (string) -- (read only)

# GET /search/{id}/

Get paginated results for a given search id.

#### **Parameters:**

• **id** (string) --

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- **sort** (string) -- One or more fields to sort results by
- group\_by\_name (boolean) When this url parameter is 'True' results are merged based on matching file name. e.g.

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- **href** (string) -- (read only)
- metadata (object) -- File metadata
- name (string) -- Directory or file name (required)
- path (string) -- Directory or file path (required)
- **proxies** (object) -- File proxies (thumbnails, etc.)
- site (string) -- Site Name

### DELETE /search/{id}/

API endpoint for file search

#### **Parameters:**

• **id** (string) ---

#### **Status Codes:**

204 No Content ---

### GET /servers/

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- count (integer) -- (required)
- next (string) --
- previous (string) --
- results[].list\_of\_interfaces (object) -- List of interfaces of this server
- results[].name (string) -- Server name (required)
- results[].site (integer) -- Site correlated with this server (required)

# GET /servers/{id}/

### **Parameters:**

• **id** (string) --

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- list\_of\_interfaces (object) -- List of interfaces of this server
- name (string) -- Server name (required)
- **site** (integer) -- Site correlated with this server (required)

# GET /settings/

API to get a list of global settings.

#### **Status Codes:**

• 200 OK --

# **Response JSON Object:**

- [].desc (string) -- (read only)
- [].id (integer) -- (read only)
- [].key (string) -- (required)
- [].value (object) --

# PATCH /settings/

API to set a setting or a group of global settings. A group of settings should be sent in key-value schema. Requested data will be stored in the database, and then sent to each site. Terminology Setting - An individual setting e.g. ngenea:realm

#### Notes on use:

- Non-global settings cannot be set on this endpoint either alone or with global settings
- Setting a key to None will delete it from the database and set null on all active sites

e.g. {"values": [{"key": "ngeneahsm\_targets:devaws:Storage", "value":
None}]}

# **Request JSON Object:**

- values[].desc (string) -- (read only)
- values[].id (integer) -- (read only)
- values[].key (string) -- (required)
- values[].value (object) --

### **Status Codes:**

• 202 Accepted -- Task id of the task fired for the associated request per site.

# POST /settings/sync/

API to sync global settings on each site Stored data will be sent to the given site or to each site if not given.

### **Query Parameters:**

• **site** (string) -- Site to run the sync operation on if provided, otherwise all sites

#### **Status Codes:**

• 202 Accepted -- Task id of the task fired for the associated request per site.

# GET /settingstasks/

API endpoint for viewing tasks.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- tasktype (string) -- Task type
- state (array) -- Task states
- job id (integer) -- Job ID

### **Status Codes:**

• 200 OK --

### **Response JSON Object:**

- count (integer) -- (required)
- next (string) --
- previous (string) --
- results[].job (integer) --
- results[].site (string) -- (required)
- results[].started (string) -- Time that the task started running
- results[].state (string) --
- results[].task id (string) -- (read only)
- results[].tasktype (string) -- (read only)
- results[].url (string) -- (read only)

# GET /settingstasks/{queued\_task\_id}/

API endpoint for viewing tasks.

#### **Parameters:**

queued\_task\_id (string) --

#### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- **completed** (string) -- Time of the task completion
- **friendly\_name** (string) -- Text to be used to describe what this task is doing.
- job (integer) --
- request (object) --
- results (string) -- (read only)
- runtime (string) -- (read only)
- site (string) -- (required)
- started (string) -- Time that the task started running
- state (string) --
- task\_id (string) -- (read only)
- tasktype (string) -- (read only)
- url (string) -- (read only)

## GET /shares/nfs/

#### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- [].clients[].advanced\_settings (object) --
- [].clients[].anonymous group id (integer) --
- [].clients[].anonymous user id (integer) --
- [].clients[].asynchronous (boolean) --
- [].clients[].force\_all\_user\_id (boolean) --
- [].clients[].force\_root\_user\_id (boolean) --
- [].clients[].fsid (string) -- (read only)

#### **Status Codes:**

204 No Content ---

### GET /sites/

API endpoint for managing sites.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

#### **Status Codes:**

• 200 OK --

- count (integer) -- (required)
- **next** (string) --
- previous (string) --
- results[].am\_i\_configured (boolean) -- Boolean field determining if UI has been configured for the site

- results[].bandwidth (integer) -- speed for site (in Mb/s)
- results[].color[] (integer) --
- results[].directories\_count (integer) -- How many directories this site has
- results[].editable (string) -- (read only)
- results[].files\_count (integer) -- How many files this site has
- results[].files\_hydrated\_count (integer) -- How many files hydrated this site has
- results[].files\_stubbed\_count (integer) -- How many files stubbed this site
  has
- results[].id (integer) -- (read only)
- results[].label (string) -- Human readable name for this site
- results[].name (string) -- Site Name. Must match [a-zA-Z0-9- ]+ (required)
- results[].public\_url (string) -- The base URL by which this site can be reached
- results[].shortcode (string) -- Shortcode
- results[].spaces[] (string) --
- results[].type (string) -- Type indicating where the site (pixstor) is deployed
- results[].url (string) -- (read only)

## POST /sites/

API endpoint for managing sites.

## **Request JSON Object:**

- am\_i\_configured (boolean) -- Boolean field determining if UI has been configured for the site
- bandwidth (integer) -- speed for site (in Mb/s)
- color[] (integer) --
- directories\_count (integer) -- How many directories this site has
- elasticsearch\_url (string) -- URL of the Elasticsearch server to use for the Analytics search backend on this site
- exclude (object) -- Global workflow excludes for this site
- file batch gb (integer) -- File batch GB
- file batch size (integer) -- File batch size
- files count (integer) -- How many files this site has
- files hydrated count (integer) -- How many files hydrated this site has
- files stubbed count (integer) -- How many files stubbed this site has
- gpfs\_iscan\_buckets (integer) -- Number of buckets to use for the gpfs snapdiff policy
- gpfs\_iscan\_threads (integer) -- Number of threads to use for the gpfs snapdiff policy
- id (integer) -- (read only)
- include (object) -- Global workflow includes for this site
- label (string) -- Human readable name for this site
- lock\_threshold (integer) -- Threshold for soft locking snapshot rotations
- name (string) -- Site Name. Must match [a-zA-Z0-9-]+ (required)
- pixstor search url (string) -- The base URL for querying the PixStor API
- public url (string) -- The base URL by which this site can be reached
- **shortcode** (string) -- Shortcode (required)
- spaces[] (string) --
- type (string) -- Type indicating where the site (pixstor) is deployed

• 201 Created --

## **Response JSON Object:**

- am\_i\_configured (boolean) -- Boolean field determining if UI has been configured for the site
- bandwidth (integer) -- speed for site (in Mb/s)
- color[] (integer) --
- directories\_count (integer) -- How many directories this site has
- editable (string) -- (read only)

# DELETE /sites/{id}/

API endpoint for managing sites.

#### **Parameters:**

• **id** (string) --

• 204 No Content --

## GET /sites/{id}/health/

API endpoint for managing sites.

#### **Parameters:**

• **id** (string) --

#### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- am\_i\_configured (boolean) -- Boolean field determining if UI has been configured for the site
- bandwidth (integer) -- speed for site (in Mb/s)
- color[] (integer) --
- directories count (integer) -- How many directories this site has
- editable (string) -- (read only)
- **files\_count** (integer) -- How many files this site has
- files\_hydrated\_count (integer) -- How many files hydrated this site has
- files\_stubbed\_count (integer) -- How many files stubbed this site has
- id (integer) -- (read only)
- label (string) -- Human readable name for this site
- name (string) -- Site Name. Must match [a-zA-Z0-9-]+ (required)
- public url (string) -- The base URL by which this site can be reached
- shortcode (string) -- Shortcode
- spaces[] (string) --
- **type** (string) -- Type indicating where the site (pixstor) is deployed
- url (string) -- (read only)

## POST /sites/{id}/refresh/

API endpoint for managing sites.

## **Parameters:**

• **id** (string) --

#### **Status Codes:**

• 201 Created --

- am\_i\_configured (boolean) -- Boolean field determining if UI has been configured for the site
- bandwidth (integer) -- speed for site (in Mb/s)
- color[] (integer) --
- directories count (integer) -- How many directories this site has
- editable (string) -- (read only)
- files count (integer) -- How many files this site has
- files hydrated count (integer) -- How many files hydrated this site has
- files stubbed count (integer) -- How many files stubbed this site has
- id (integer) -- (read only)
- label (string) -- Human readable name for this site
- name (string) -- Site Name. Must match [a-zA-Z0-9-]+ (required)
- public url (string) -- The base URL by which this site can be reached

- shortcode (string) -- Shortcode
- spaces[] (string) --
- type (string) -- Type indicating where the site (pixstor) is deployed
- url (string) -- (read only)

## GET /sites/{id}/settings/

API endpoint for managing sites.

### **Parameters:**

• id (string) --

## **Query Parameters:**

• flat (boolean) -- Return flat dict

## **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- [].desc (string) -- (read only)
- [].id (integer) -- (read only)
- [].key (string) -- (required)
- [].value (object) --

## PATCH /sites/{id}/settings/

API to set a setting or a group of settings associated with a site. A group of settings should be sent in key-value schema. Terminology Setting - An individual setting e.g. sambda:realm

#### **Parameters:**

• id (string) --

### **Request JSON Object:**

- values[].desc (string) -- (read only)
- values[].id (integer) -- (read only)
- values[].key (string) -- (required)
- values[].value (object) --

## **Status Codes:**

• 202 Accepted -- Task id of the task fired for the associated request.

# POST /sites/{id}/settings/refresh/

Refresh settings for a given site under management. This API will also create settings in the hub for this site if they don't already exist.

### **Parameters:**

• **id** (string) --

### **Status Codes:**

• 202 Accepted -- Task id of the task fired for the associated request.

## **GET** /spaces/

Model View Set for filebrowser's Space model.

## **Query Parameters:**

• **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.

• page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- count (integer) -- (required)
- next (string) --
- previous (string) --
- results[].color[] (integer) --
- results[].created (string) -- Time of the job creation (read only)
- results[].editable (string) -- (read only)
- results[].id (integer) -- (read only)
- results[].mountpoint (string) -- Mount point (required)
- results[].name (string) -- Space Name (required)
- results[].on\_sites (object) --
- results[].sites[].id (string) -- (read only)
- results[].sites[].label (string) -- (required)
- results[].sites[].name (string) -- (required)
- results[].sites[].pool (string) -- (read only)
- results[].sites[].usage[] (integer) --
- results[].size (integer) -- Space size quota in bytes. No value specified, means as large as your system allows.
- results[].snapshot\_schedule.duration (string) -- (required)
- results[].snapshot schedule.frequency (string) -- (required)
- results[].snapshot schedule.id (integer) -- (read only)
- results[].snapshot schedule.space (integer) --
- results[].snapshot schedule.time (string) -- (required)
- results[].url (string) -- (read only)
- results[].uuid (string) -- (read only)

## POST /spaces/

Model View Set for filebrowser's Space model.

## **Request JSON Object:**

- color[] (integer) --
- **created** (string) -- Time of the job creation (read only)
- mountpoint (string) -- (required)
- name (string) -- (required)
- sites[].id (string) -- (read only)
- sites[].label (string) -- (required)
- sites[].name (string) -- (required)
- sites[].pool (string) -- (read only)
- sites[].usage[] (integer) --
- **size** (integer) -- Space size quota in bytes. No value specified, means as large as your system allows.
- snapshot schedule.duration (string) -- (required)
- snapshot schedule.frequency (string) -- (required)

- snapshot schedule.id (integer) -- (read only)
- snapshot schedule.space (integer) --
- snapshot\_schedule.time (string) -- (required)

• 201 Created --

## **Response JSON Object:**

- color[] (integer) --
- **created** (string) -- Time of the job creation (read only)
- editable (string) -- (read only)
- id (integer) -- (read only)
- mountpoint (string) -- Mount point (required)
- name (string) -- Space Name (required)
- on\_sites (object) --
- sites[].id (string) -- (read only)
- sites[].label (string) -- (required)
- sites[].name (string) -- (required)
- sites[].pool (string) -- (read only)
- sites[].usage[] (integer) --
- **size** (integer) -- Space size quota in bytes. No value specified, means as large as your system allows.
- snapshot\_schedule.duration (string) -- (required)
- snapshot\_schedule.frequency (string) -- (required)
- snapshot\_schedule.id (integer) -- (read only)
- snapshot schedule.space (integer) --
- snapshot schedule.time (string) -- (required)
- url (string) -- (read only)
- uuid (string) -- (read only)

## GET /spaces/{id}/

Model View Set for filebrowser's Space model.

#### **Parameters:**

• **id** (string) --

#### **Status Codes:**

• 200 OK --

- color[] (integer) --
- **created** (string) -- Time of the job creation (read only)
- editable (string) -- (read only)
- id (integer) -- (read only)
- mountpoint (string) -- Mount point (required)
- name (string) -- Space Name (required)
- on sites (object) --
- sites[].id (string) -- (read only)
- sites[].label (string) -- (required)
- sites[].name (string) -- (required)
- sites[].pool (string) -- (read only)
- sites[].usage[] (integer) --
- **size** (integer) -- Space size quota in bytes. No value specified, means as large as your system allows.

- snapshot schedule.duration (string) -- (required)
- snapshot schedule.frequency (string) -- (required)
- snapshot schedule.id (integer) -- (read only)
- snapshot schedule.space (integer) --
- snapshot schedule.time (string) -- (required)
- url (string) -- (read only)
- **uuid** (string) -- (read only)

## PATCH /spaces/{id}/

Model View Set for filebrowser's Space model.

### **Parameters:**

• id (string) --

## **Request JSON Object:**

- color[] (integer) --
- **created** (string) -- Time of the job creation (read only)
- mountpoint (string) -- (read only)
- name (string) --
- sites[].id (string) -- (read only)
- sites[].label (string) -- (required)
- sites[].name (string) -- (required)
- sites[].pool (string) -- (read only)
- sites[].usage[] (integer) --
- **size** (integer) -- Space size quota in bytes. No value specified, means as large as your system allows.
- snapshot\_schedule.duration (string) -- (required)
- snapshot\_schedule.frequency (string) -- (required)
- snapshot\_schedule.id (integer) -- (read only)
- snapshot schedule.space (integer) --
- snapshot schedule.time (string) -- (required)

#### **Status Codes:**

• 200 OK --

- color[] (integer) --
- **created** (string) -- Time of the job creation (read only)
- editable (string) -- (read only)
- id (integer) -- (read only)
- mountpoint (string) -- Mount point (required)
- name (string) -- Space Name (required)
- on sites (object) --
- sites[].id (string) -- (read only)
- sites[].label (string) -- (required)
- sites[].name (string) -- (required)
- sites[].pool (string) -- (read only)
- sites[].usage[] (integer) --
- **size** (integer) -- Space size quota in bytes. No value specified, means as large as your system allows.
- snapshot schedule.duration (string) -- (required)
- snapshot\_schedule.frequency (string) -- (required)
- snapshot schedule.id (integer) -- (read only)

- snapshot schedule.space (integer) --
- snapshot\_schedule.time (string) -- (required)
- url (string) -- (read only)
- **uuid** (string) -- (read only)

## DELETE /spaces/{id}/

Model View Set for filebrowser's Space model.

### **Parameters:**

• id (string) --

### **Status Codes:**

204 No Content ---

## GET /spaces/{id}/files/

Model View Set for filebrowser's Space model.

## **Parameters:**

• **id** (string) --

## **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- **site** (string) -- Site to run the stat operation on if provided, otherwise all space's sites
- path (string) -- Path to retrieve stat
- details (boolean) -- Retrieve all the details of the children files
- restricted (boolean) -- Include restricted objects
- check available sites (boolean) -- Check only available sites
- custom\_refresh\_period (integer) -- Custom time in seconds to invalidate the DB cache
- custom timeout (integer) -- Custom time in seconds to invalidate the task
- raise\_exception (boolean) -- Raise exception if timeout

### **Status Codes:**

• 200 OK --

- atime (string) --
- children (string) -- (read only)
- ctime (string) --
- data size (integer) ---
- deleted (boolean) --
- disk usage (integer) ---
- image preview (string) -- Relative URL of an image preview
- metadata (object) --
- mtime (string) --
- name (string) -- Name of of the fs object
- path (string) -- Path of the object (required)

- path depth (integer) --
- remote locations (object) --
- restricted (boolean) --
- site (string) -- (read only)
- size (integer) --
- status (string) -- Migration status
- thumbnail (string) -- Relative URL of an object thumbnail
- time refreshed (string) --
- total files (integer) -- Only applies to directories
- type (string) --
- url (string) -- (read only)
- video preview (string) -- Relative URL of a video preview

## GET /storagepools/

## **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

#### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- count (integer) -- (required)
- **next** (string) --
- previous (string) --
- results[].capacity (integer) -- Capacity of storage pool (required)
- results[].filesystem (string) -- Storage pool filesystem (required)
- results[].free space (integer) -- Free space of storage pool (required)
- results[].name (string) -- Name storage pool (required)
- results[].site (integer) -- Site correlated with storage object (required)
- results[].used\_space (integer) -- Used space of storage pool (required)

# GET /storagepools/{id}/

### **Parameters:**

• **id** (string) --

## **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- capacity (integer) -- Capacity of storage pool (required)
- **filesystem** (string) -- Storage pool filesystem (required)
- **free space** (integer) -- Free space of storage pool (required)
- **name** (string) -- Name storage pool (required)
- **site** (integer) -- Site correlated with storage object (required)
- **used space** (integer) -- Used space of storage pool (required)

## **GET** /tags/

API endpoint for search tags

## **Query Parameters:**

• filter (string) -- substring that returned tags must contain

#### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

• [].name (string) -- (required)

### **GET** /tasks/

API endpoint for viewing tasks.

## **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- tasktype (string) -- Task type
- state (array) -- Task states
- job\_id (integer) -- Job ID
- internal (string) --

### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- count (integer) -- (required)
- **next** (string) --
- previous (string) --
- results[].job (integer) -- (required)
- results[].site (string) -- (required)
- results[].started (string) -- Time that the task started running
- results[].state (string) --
- results[].task id (string) -- Celery task ID
- results[].tasktype (string) -- (required)
- results[].url (string) -- (read only)

## GET /tasks/{task id}/

API endpoint for viewing tasks.

#### **Parameters:**

• task\_id (string) --

#### **Status Codes:**

• 200 OK --

- completed (string) -- Time of the task completion
- friendly name (string) -- Text to be used to describe what this task is doing.
- **job** (integer) -- (required)
- paths (string) -- (read only)
- result (object) --
- runtime (string) -- (read only)

- site (string) -- (required)
- started (string) -- Time that the task started running
- state (string) --
- task id (string) -- Celery task ID
- tasktype (string) -- (required)
- url (string) -- (read only)

# GET /tasks/{task\_id}/files/

API endpoint for viewing tasks.

### **Parameters:**

• task\_id (string) --

## **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.
- state (string) --
- type (string) --
- site (string) --

## **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- **completed** (string) -- Time of the task completion
- **friendly\_name** (string) -- Text to be used to describe what this task is doing.
- **job** (integer) -- (required)
- paths (string) -- (read only)
- result (object) --
- runtime (string) -- (read only)
- **site** (string) -- (required)
- **started** (string) -- Time that the task started running
- **state** (string) --
- task id (string) -- Celery task ID
- tasktype (string) -- (required)
- url (string) -- (read only)

## **GET** /users/

API endpoint for managing users.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

• 200 OK --

## **Response JSON Object:**

- count (integer) -- (required)
- next (string) --
- previous (string) --
- results[].date\_joined (string) --
- results[].email (string) --
- results[].first name (string) --
- results[].groups[].id (integer) -- (read only)
- results[].groups[].name (string) -- (required)
- results[].groups[].url (string) -- (read only)
- results[].id (integer) -- (read only)
- results[].is\_active (boolean) -- Designates whether this user should be treated as active. Unselect this instead of deleting accounts.
- results[].last login (string) --
- results[].last\_name (string) --
- results[].nas user.allow ssh (boolean) --
- results[].nas\_user.primary\_group (string) -- (required)
- results[].nas\_user.uid (integer) -- UID number for the user. This is automatically generated. And cannot be changed (read only)
- results[].profile.country (string) -- User's country
- results[].profile.default\_site (integer) --
- results[].profile.department (string) -- Name of the department user is working in
- results[].profile.home\_site (integer) --
- results[].profile.line\_manager (string) -- Name of the line manager of the user
- results[].profile.phone (string) -- User's phone number
- results[].profile.timezone (string) -- Timezone in a string format e.g. 'Europe/London'
- results[].url (string) -- (read only)
- results[].username (string) -- Required. 150 characters or fewer. Letters, digits and @/./+/-/\_ only. (required)

#### POST /users/

API endpoint for managing users.

### Request JSON Object:

- email (string) --
- first name (string) --
- groups[] (string) ---
- last name (string) --
- nas\_user.allow\_ssh (boolean) --
- nas\_user.primary\_group (string) -- (required)
- password (string) -- (required)
- profile.country (string) -- User's country
- profile.default site (integer) --
- profile.department (string) -- Name of the department user is working in
- profile.home site (integer) --

- profile.line manager (string) -- Name of the line manager of the user
- profile.phone (string) -- User's phone number
- profile.timezone (string) -- Timezone in a string format e.g. 'Europe/London'
- **username** (string) -- Required. 150 characters or fewer. Letters, digits and @/./+/-/\_ only. (required)

201 Created ---

## **Response JSON Object:**

- email (string) --
- first name (string) --
- groups[] (string) --
- last name (string) --
- nas\_user.allow\_ssh (boolean) --
- nas\_user.primary\_group (string) -- (required)
- password (string) -- (required)
- profile.country (string) -- User's country
- profile.default\_site (integer) --
- profile.department (string) -- Name of the department user is working in
- profile.home site (integer) --
- **profile.line\_manager** (string) -- Name of the line manager of the user
- profile.phone (string) -- User's phone number
- profile.timezone (string) -- Timezone in a string format e.g. 'Europe/London'
- **username** (string) -- Required. 150 characters or fewer. Letters, digits and @/./+/-/\_ only. (required)

# POST /users/change\_password/

API endpoint for managing users.

### **Request JSON Object:**

- **new password** (string) -- (required)
- old password (string) -- (required)

#### **Status Codes:**

201 Created ---

## **Response JSON Object:**

- new\_password (string) -- (required)
- **old\_password** (string) -- (required)

## GET /users/{username}/

API endpoint for managing users.

## **Parameters:**

• username (string) --

#### **Status Codes:**

• 200 OK --

- date joined (string) --
- email (string) --
- first name (string) --
- groups[].id (integer) -- (read only)
- groups[].name (string) -- (required)

- groups[].url (string) -- (read only)
- id (integer) -- (read only)
- **is\_active** (boolean) -- Designates whether this user should be treated as active. Unselect this instead of deleting accounts.
- last\_login (string) --
- last\_name (string) --
- nas\_user.allow\_ssh (boolean) --
- nas\_user.primary\_group (string) -- (required)
- nas\_user.uid (integer) -- UID number for the user. This is automatically generated. And cannot be changed (read only)
- profile.country (string) -- User's country
- profile.default site (integer) --
- profile.department (string) -- Name of the department user is working in
- profile.home site (integer) --
- profile.line manager (string) -- Name of the line manager of the user
- profile.phone (string) -- User's phone number
- profile.timezone (string) -- Timezone in a string format e.g. 'Europe/London'
- url (string) -- (read only)
- **username** (string) -- Required. 150 characters or fewer. Letters, digits and @/./+/-/\_ only. (required)

## PATCH /users/{username}/

API endpoint for managing users.

#### **Parameters:**

• username (string) --

## **Request JSON Object:**

- email (string) --
- first name (string) --
- groups[] (string) --
- last name (string) --
- nas user.allow ssh (boolean) --
- nas user.primary group (string) -- (required)
- password (string) ---
- **profile.country** (string) -- User's country
- profile.default site (integer) --
- profile.department (string) -- Name of the department user is working in
- profile.home site (integer) --
- profile.line manager (string) -- Name of the line manager of the user
- profile.phone (string) -- User's phone number
- profile.timezone (string) -- Timezone in a string format e.g. 'Europe/London'

## **Status Codes:**

• 200 OK --

- email (string) --
- first name (string) --
- groups[] (string) --
- last\_name (string) --
- nas\_user.allow\_ssh (boolean) --
- nas user.primary group (string) -- (required)

- password (string) --
- profile.country (string) -- User's country
- profile.default\_site (integer) --
- profile.department (string) -- Name of the department user is working in
- profile.home site (integer) --
- profile.line\_manager (string) -- Name of the line manager of the user
- profile.phone (string) -- User's phone number
- profile.timezone (string) -- Timezone in a string format e.g. 'Europe/London'

## DELETE /users/{username}/

API endpoint for managing users.

#### **Parameters:**

• username (string) --

#### **Status Codes:**

204 No Content ---

## POST /users/{username}/activate/

Activates user account with given username.

#### **Parameters:**

• username (string) --

### **Status Codes:**

201 Created ---

# POST /users/{username}/deactivate/

Deactivates user account with given username.

#### **Parameters:**

• username (string) --

## **Status Codes:**

• 201 Created --

## **GET** /workflows/

API endpoint for viewing workflows.

### **Query Parameters:**

- **page** (integer) -- A page number within the paginated result set. When not given, first page is retrieved by default.
- page\_size (integer) -- Number of results to return per page. Page size parameter can be a number between 20 and 100. For disabling pagination and retrieving all results, 0 should be given. When page size parameter is empty or <20, 20 results are returned by default. When page size parameter >100, 100 results are returned by default.

### **Status Codes:**

• 200 OK --

- count (integer) -- (required)
- next (string) --
- previous (string) --
- results[].discovery (string) --

- results[].discovery options (object) --
- results[].enabled (boolean) -- Is the workflow available for use?
- results[].fields (object) --
- results[].filter rules (object) --
- results[].icon\_classes (object) --
- results[].id (integer) -- (read only)
- results[].label (string) -- Friendly name of the workflow (required)
- results[].name (string) -- Name of Workflow (required)
- results[].schedule\_only (boolean) -- Workflow only callable inside of a schedule
- results[].visible (boolean) -- Is the workflow visible on the UI?

## POST /workflows/

API endpoint for viewing workflows.

## **Request JSON Object:**

- discovery (string) --
- discovery\_options (object) --
- enabled (boolean) -- Is the workflow available for use?
- fields (object) --
- filter rules (object) --
- icon classes (object) --
- id (integer) -- (read only)
- label (string) -- Friendly name of the workflow (required)
- name (string) -- Name of Workflow (required)
- schedule\_only (boolean) -- Workflow only callable inside of a schedule
- visible (boolean) -- Is the workflow visible on the UI?

#### **Status Codes:**

201 Created ---

### **Response JSON Object:**

- discovery (string) --
- discovery\_options (object) --
- enabled (boolean) -- Is the workflow available for use?
- fields (object) --
- filter\_rules (object) --
- icon classes (object) --
- id (integer) -- (read only)
- label (string) -- Friendly name of the workflow (required)
- name (string) -- Name of Workflow (required)
- schedule only (boolean) -- Workflow only callable inside of a schedule
- visible (boolean) -- Is the workflow visible on the UI?

## GET /workflows/{id}/

API endpoint for viewing workflows.

### **Parameters:**

• **id** (string) --

#### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- discovery (string) --
- discovery\_options (object) --
- enabled (boolean) -- Is the workflow available for use?
- fields (object) --
- filter rules (object) --
- icon classes (object) --
- id (integer) -- (read only)
- label (string) -- Friendly name of the workflow (required)
- name (string) -- Name of Workflow (required)
- schedule\_only (boolean) -- Workflow only callable inside of a schedule
- visible (boolean) -- Is the workflow visible on the UI?

## PATCH /workflows/{id}/

API endpoint for viewing workflows.

#### **Parameters:**

• id (string) --

## **Request JSON Object:**

- discovery (string) --
- discovery options (object) --
- enabled (boolean) -- Is the workflow available for use?
- fields (object) --
- filter rules (object) --
- icon\_classes (object) --
- id (integer) -- (read only)
- label (string) -- Friendly name of the workflow (required)
- name (string) -- Name of Workflow (required)
- schedule only (boolean) -- Workflow only callable inside of a schedule
- visible (boolean) -- Is the workflow visible on the UI?

### **Status Codes:**

• 200 OK --

## **Response JSON Object:**

- **discovery** (string) --
- discovery\_options (object) --
- enabled (boolean) -- Is the workflow available for use?
- fields (object) --
- filter rules (object) --
- icon classes (object) --
- id (integer) -- (read only)
- label (string) -- Friendly name of the workflow (required)
- name (string) -- Name of Workflow (required)
- schedule only (boolean) -- Workflow only callable inside of a schedule
- visible (boolean) -- Is the workflow visible on the UI?

## DELETE /workflows/{id}/

API endpoint for viewing workflows.

#### **Parameters:**

• **id** (string) --

• 204 No Content --

### Tools

The following sections document add-on tools for Ngenea Hub

## ngclient

### **NGCLIENT**

#### **SYNOPSIS**

ngclient authenticate (-u USERNAME [-p PASSWORD] | -T TOKEN) [-k NAME]

**ngclient** migrate path... [-s site] [-r] [-p] [options...]

**ngclient** recall path... [-s site] [-r] [options...]

**ngclient** send path... [-s source] -t target [options...]

ngclient workflows COMMAND

ngclient features COMMAND

#### **DESCRIPTION**

**ngclient** is a CLI wrapper for the default Ngenea Hub workflows - migrate, recall, and send. It also provides a mechanism for generating authentication tokens.

**ngclient** settings can be read from a config file, rather than being passed on the command line. See **ngenea-client.conf(5)** for more information on the configuration format. CLI flags take precedence over config file settings.

The authenticate command can be used to generate a client key from a username or access token. The generated client key will be printed to stdout. That client key can then be used with the workflow sub-commands, either via the --client-key flag, or by saving it to the **ngenea-client.conf(5)** configuration file.

The workflows command group contains sub-commands for interacting with workflows, such as listing workflows and importing new one. See **ngclient-workflows(1)** for more details.

The features command group contains sub-commands for listing, enabling, or disabling feature flags. See **ngclient-features(1)** for more details.

#### **OPTION SUMMARY**

path... One paths to call the workflow on

-T, --access-token TOKEN Access token to authenticate with

```
Username to authenticate with
-u, --username USERNAME
-p, --password PASSWORD
                           Password for the authentication username
-k, --key-name NAME
                           Unique name for the client key
    --base-url
                           Base URL of the {{ brand name }} API
                           Alternative configuration file path
-c, --config CONFIG
    --client-key KEY
                           Client API key to authenticate with
-s, --site SITE
                           Site to perform the workflow on
-t, --target TARGET
                           Site to send files to
-d, --no-wait
                           Exit after job is submitted, don't wait
for it to complete
    --timeout SECONDS
                           wait for completion timeout. If not set,
wait indefinitely
                           Perform task recursively.
-r, --recursive
                           Premigrate files from site
-p, --premigrate
-H, --hydrate
                           Hydrate files on the send target site
-h, --help
                           Print help message and exit
```

### **OPTIONS**

#### • -T, --access-token

An access token to generate a client key with.

#### -u, --username

Username to generate a client key with.

#### -p, --password

Password to use in combination with --username

If --username is specified and --password isn't, you will be prompted to enter a password interactively. This may be preferrable so that the password doesn't appear in shell history.

## -k, --key-name

A unique name to assign when generating a client key.

This will be displayed in the Ngenea Hub UI

If not specified, a random uuid will be generated for the key name.

#### • --base-url

Base URL of the Ngenea Hub API, which operations will be performed against.

This can be used to perform Ngenea Hub operations on a remote server.

If not specified, the default is http://localhost:8000/api

## · -c, --config

The path to an alternative configuration file.

If not specified, the default configuration paths will be used. The default paths are in the user's HOME directory \$HOME/.config/ngenea/ngenea-client.conf, and the global configuration at /etc/ngenea/ngenea-client.conf

See **ngenea-client.conf(5)** for more information on the configuration format.

Command line options take precedence over any corresponding config file settings.

## -D, --no-verify

**Disables TLS Verification** 

By default, **ngclient** will verify TLS certificate at the remote end.

With this flag, requests made by **ngclient** will accept any TLS certificate presented by the server, and will ignore hostname mismatches and/or expired certificates.

## --client-key

Ngenea Hub authentication client key.

This can be generated via the Ngenea Hub REST API, or using **ngclient(1)** authenticate

#### • -s. --site

Site to use for workflows.

For migrate and recall, this is the site where the workflows execute. For send, this is the source site, from which files are sent.

Site does not have to match the node where **ngclient** is being called. This can be used to migrate/recall/send files from a remote site.

Note - shell-globbing will be evaluated on the local node. For a remote site, the files that the glob would match may differ.

## -t, --target

Target site for the send workflow

#### · -d, --no-wait

Don't wait for workflows to complete.

By default, **ngclient** will wait for the workflow to complete, subject to -- timeout.

With this flag, **ngclient** will exit immediately. The workflow will continue to execute independently. In that case, the workflow can be monitored in the Ngenea Hub UI

#### • --timeout

How long to wait for workflows to complete, in seconds.

If not specified, **ngclient** will wait indefinitely.

If the workflow doesn't complete within the timeout, the client will exit with an error. The workflow itself may continue to execute.

### • -r, --recursive

Migrate or recall files and directories recursively.

## • -p, --premigrate

Premigrate files

Premigrated files are migrated, but the data is kept resident.

## · -H, --hydrate

Controls whether the send workflow 'hydrates' files on the target.

If false, files are only reverse stubbed on the target.

### • -h, --help

Prints the help message.

EXAMPLES
GENERATE A CLIENT KEY

```
$ ngclient authenticate --username pixadmin -k ngclient-pixadmin
pixadmin's password:
```

```
jDBh2cRk6.LswQfylT2BtGiqtYUWhMB1iipJmQNgr
```

NOTE: The authenticate command doesn't read config values from the config file, so the --no-verify and --base-url arguments should be passed as cmd arguments if default values aren't required

RECALL A FILE

```
ngclient recall /mmfs1/data/hello.txt -s site1 --client-key
jDBh2cRk6.LswQfylT2BtGiqtYUWhMB1iipJmQNqr
```

For brevity, the site and client-key can be saved to the config file

PREMIGRATE A DIRECTORY RECURSIVELY

Assuming the site and client key has been saved to the config file

ngclient migrate /mmfs1/data/sample data/cats -p -r

#### SEND A FILE TO A REMOTE SITE

ngclient send /mmfs1/data/hello.txt -s site1 -t site2 --hydrate

#### **AVAILABILITY**

Distributed as part of the ngenea-hub-client rpm, or the ngclient wheel (Python) for non-Red Hat based systems.

The ngclient wheel can be installed and run on any operating system.

Note - transparent\_recall(1) is packaged along with ngclient, but transparent\_recall will only work on Unix-based operating systems.

## ngclient-workflows

#### NGCLIENT-WORKFLOWS

### **SYNOPSIS**

**ngclient workflows** list [workflow-id] [options...]

**ngclient workflows** import workflow-file [options...]

**ngclient workflows** update workflow-id workflow-file [options...]

**ngclient workflows** delete workflow-id [options...]

#### DESCRIPTION

The list command is used to list one or more existing workflows from Ngenea Hub. By default, workflows are output in json format, one per line. The --yaml flag can be used to output as yaml.

The import command can be used to import a new, custom workflow from a json or yaml formatted file.

Currently it is not possible to invoke these custom workflows from **ngclient**, once created. They can be invoked from the Ngenea Hub UI or via the REST API.

The update command can be used to update an existing workflow from a json or yaml formatted file. The file can contain only the fields you want to change to perform a partial update, or a whole workflow definition for a full replacement.

NOTE - it's not possible to make partial changes to the fields or filter\_rules blocks. They can only be replaced as a whole.

The delete command can be used to delete an existing workflow, by id.

Base URL and API key settings can be read from a config file, rather than being passed on the command line. See **ngenea-client.conf(5)** for more information on the configuration format. CLI flags take precedence over config file settings.

Interacting with workflows requires Ngenea Hub authentication. The **ngclient(1)** authenticate command can be used to generate a client key from a username or access token.

#### **OPTION SUMMARY**

workflow-id workflow-file definition	Unique workflow identifier File containing a custom workflow
yaml	List workflows <b>in</b> yaml format
base-url	<pre>Base URL of the {{ brand_name }} API</pre>
-c,config CONFIG client-key KEY	Alternative configuration file path Client API key to authenticate with
-h,help	Print help message <b>and</b> exit

## **OPTIONS**

#### workflow-file

Path to a json or yaml formatted file, containing a workflow definition.

If '-' is used, the workflow definition will be read from stdin.

The workflow format is described in the main documentation, section '4.4. Custom Workflows'

#### --yaml

List workflows in yaml format.

By default, workflows are output in json format, one per line (jsonl).

The --yaml flag will output the workflows in structured yaml format. If multiple workflows are being listed, each one will be separated by a blank line.

#### --base-url

Base URL of the Ngenea Hub API, which operations will be performed against.

This can be used to perform Ngenea Hub operations on a remote server.

If not specified, the default is http://localhost:8000/api

## • -c, --config

The path to an alternative configuration file.

If not specified, the default configuration paths will be used. The default paths are in the user's HOME directory \$HOME/.config/ngenea/ngenea-client.conf, and the global configuration at /etc/ngenea/ngenea-client.conf

See **ngenea-client.conf(5)** for more information on the configuration format.

Command line options take precedence over any corresponding config file settings.

## --client-key

Ngenea Hub authentication client key.

This can be generated via the Ngenea Hub REST API, or using **ngclient(1)** authenticate

## -h, --help

Prints the help message.

EXAMPLES
GENERATE A CLIENT KEY

```
$ ngclient authenticate --username pixadmin -k ngclient-pixadmin
pixadmin's password:
jDBh2cRk6.LswQfylT2BtGiqtYUWhMB1iipJmQNgr
```

The following examples assume that the client key has been saved in the default config file.

GET AN EXISTING WORKFLOW

```
$ ngclient workflows list 1
{"id": 1, "name": "migrate", "label": "Migrate", "icon_classes":
["fa fa-cloud fa-stack-2x text-success", "fa fa-angle-up fa-stack-2x text-light"], "discovery": "recursive", "enabled": true, "visible": true, "fields": [], "filter_rules": [{"type": "all", "state": "all", "action": [{"name": "dynamo.tasks.migrate"}], "description": "Migrates a file off from a given path"}]}
```

```
$ ngclient workflows list --yaml
id: 1
name: migrate
label: Migrate
discovery: recursive
...
enabled: true
visible: true

id: 2
name: premigrate
label: Premigrate
discovery: recursive
...
enabled: true
visible: true
```

(the above example output has been truncated)

## IMPORT A CUSTOM WORKFLOW

Using the following workflow definition in json format

```
$ cat overwrite_workflow.json
{"name": "recall_overwrite", "label": "Overwrite On Recall",
"icon_classes": ["fa fa-cloud fa-stack-2x text-primary", "fa fa-caret-down fa-stack-2x text-light"], "filter_rules": [{"type": "all", "state": "all", "action": [{"name": "destinationsite", "overwrite": true}]}], "fields": [{"name": "destinationsite", "type": "enum[site]", "label": "Destination Site", "value": "site"}]}
```

Import the workflow as follows

```
ngclient workflows import overwrite_workflow.json
```

### RENAME A WORKFLOW

With the change in yaml format, using '-' to read from stdin

```
echo "name: overwrite_on_recall" | ngclient workflows update 6 -
```

#### **DELETE A WORKFLOW**

```
ngclient workflows delete 6
```

#### **AVAILABILITY**

Distributed as part of the ngenea-hub-client rpm, or the ngclient wheel (Python) for non-Red Hat based systems.

The ngclient wheel can be installed and run on any operating system.

## ngclient-features

#### **NGCLIENT-FEATURES**

## **SYNOPSIS**

ngclient features list [options...]

**ngclient features** enable name [options...]

**ngclient features** disable name [options...]

## **DESCRIPTION**

The list command is used to list available feature flags for Ngenea Hub.

The enable and disable commands can be used to enable a named feature in Ngenea Hub.

Base URL and API key settings can be read from a config file, rather than being passed on the command line. See **ngenea-client.conf(5)** for more information on the configuration format. CLI flags take precedence over config file settings.

Interacting with features requires Ngenea Hub authentication. The **ngclient(1)** authenticate command can be used to generate a client key from a username or access token.

## **OPTION SUMMARY**

name	Name of the feature to enable <b>or</b> disable
json	List features <b>in</b> json format
base-url	Base URL of the {{ brand_name }} API
-c,config CONFIG client-key KEY	Alternative configuration file path Client API key to authenticate with

## **OPTIONS**

## · --json

List features in json format.

By default, the list command will report features in a table-based format. The -- json flag will report features in json format instead, one per line.

#### · --base-url

Base URL of the Ngenea Hub API, which operations will be performed against.

This can be used to perform Ngenea Hub operations on a remote server.

If not specified, the default is http://localhost:8000/api

## · -c, --config

The path to an alternative configuration file.

If not specified, the default configuration paths will be used. The default paths are in the user's HOME directory \$HOME/.config/ngenea/ngenea-client.conf, and the global configuration at /etc/ngenea/ngenea-client.conf

See **ngenea-client.conf(5)** for more information on the configuration format.

Command line options take precedence over any corresponding config file settings.

## --client-key

Ngenea Hub authentication client key.

This can be generated via the Ngenea Hub REST API, or using **ngclient(1)** authenticate

## -h, --help

Prints the help message.

## **EXAMPLES**

The following examples assume that the client key has been saved in the default config file.

## LIST AVAILABLE FEATURES

<pre>\$ ngclient features list</pre>	
[X] searchui	Enable search features <b>in</b> the UI
[ ] bandwidth controls	Enable bandwidth controls <b>in</b> the UI
[] rbac	Enable role-based access controls

(The above are just examples and may not reflect actual feature flags)

#### **ENABLE A FEATURE**

ngclient features enable rbac

#### DISABLE A FEATURE

ngclient features disable searchui

#### **AVAILABILITY**

Distributed as part of the ngenea-hub-client rpm, or the ngclient wheel (Python) for non-Red Hat based systems.

The ngclient wheel can be installed and run on any operating system.

**SEE ALSO** 

ngclient(1), ngenea-client.conf(5)

**LICENSE** 

2021 ArcaPix Limited

See the License for the specific language governing permissions and limitations under the License.

ngenea-client.conf

## **NGENEACLIENTCONF**

#### **SYNOPSIS**

The Ngenea Hub client configuration files is used to configure **ngclient(1)** and **transparent\_recall(1)** 

The default config file locations are in the user's HOME directory \$HOME/.config/ngenea/ngenea-client.conf, with a global config at /etc/ngenea/ngenea-client.conf.

If both configuration files exist, the user config will take precedence, with the global config used for any values not specified in the user config.

For example

```
# global config
[settings]
base_url = http://10.172.0.23:8000/api
site = default
```

```
# user config
[settings]
site = mysite
```

would result in base\_url = http://10.172.0.23:8000/api, since it's not specified in the user config, and site = mysite since the value from the user config takes precedence.

NOTE - unless explicitly specified with the --config flag, both ngclient(1) and transparent recall(1) will use this same default config files.

If a config file is explicitly specified with --config, the default configs will not be considered at all.

Command line options take precedence over any corresponding config file settings.

## **FILE FORMAT**

**ngenea-client.conf(5)** uses an ini-style format.

It is made up of key = value lines under the [settings] section header.

```
[settings]
client_key = mykey
```

Boolean type values can be either true, false, yes, or no (case-insensitive)

Additional sections, or unrecognised keys are ignored.

## **PARAMETERS**

## base url

Base URL of the Ngenea Hub API, which operations will be performed against.

This can be used to perform Ngenea Hub operations on a remote server.

If not specified, the default is http://localhost:8000/api

## client\_key

Ngenea Hub authentication client key.

This can be generated via the Ngenea Hub REST API, or using **ngclient(1)** authenticate

#### site

The default site to use for workflows.

For migrate and recall, this is the site where the workflows execute. For send, this is the source site, from which files are sent.

#### wait

Whether to wait for workflows to complete.

If true (default), tools will wait for the workflow to complete, subject to timeout.

If false, tools will exit immediately. The workflow will continue to execute independently. In that case, the workflow can be monitored in the Ngenea Hub UI

#### timeout

How long to wait for workflows to complete, in seconds.

If not set, tools will wait indefinitely.

If the workflow doesn't complete within the timeout, the client will exit with an error. The workflow itself may continue to execute.

## hydrate

For **ngclient(1)** send, controls whether sent files are hydrated on the target.

If false, files are only reverse stubbed on the target.

## api secure verify

Whether to enable/disable TLS Verification when communicating with Ngenea Hub REST API.

This is particularly useful when Ngenea Hub REST API is behind a self-signed certificate.

If false, TLS verification will be disabled.

If not specified, the default is true.

### **EXAMPLE**

```
[settings]
base_url = http://mypixserver:8000/api
client_key = ...
site = mysite
wait = true
timeout = 180
hydrate = true
api_secure_verify = true
```

#### **SEE ALSO**

ngclient(1), transparent recall(1)

#### **LICENSE**

## transparent recall

## TRANSPARENT RECALL

**SYNOPSIS** 

transparent recall file [--config CONF]

**DESCRIPTION** 

transparent\_recall is a tool for recalling individual files via Ngenea Hub

Performing recalls via Ngenea Hub allows for monitoring progress via the Ngenea Hub UI. Individual recall tasks performed on demand, but for reporting are grouped together into one job per hour.

**transparent\_recall** can be called directly to recall files, but typically would be installed as a filesystem policy rule. See **TRANSPARENT RECALL POLICY** for more info.

#### **OPTION SUMMARY**

file	One <b>or</b> more directory to export events <b>from</b>
config CONF -h,help	Alternative configuration file location Print help message <b>and</b> exit

## **OPTIONS**

#### --config

The path to an alternative configuration file.

If not specified, the default configuration paths will be used. The default paths are in the user's HOME directory \$HOME/.config/ngenea/ngenea-client.conf, and the global configuration at /etc/ngenea/ngenea-client.conf

See the **CONFIGURATION** section below and ngenea-client.conf(5) for more information.

Command line options take precedence over any corresponding config file settings.

## -h, --help

Prints the help message.

#### CONFIGURATION

**transparent\_recall** requires authentication to be able to perform recalls via Ngenea Hub. To authenticate, a valid client\_key must be placed in the configuration file.

A client key can be generated via the Ngenea Hub REST API, or using the **ngclient(1)** authenticate command.

Minimally, the configuration must include this client\_key, as well as the site where recalls are performed.

```
[settings]
client_key = ...
site = thissite
```

The site must match the the node where the recall was triggered.

**transparent\_recall** will respect any **ngclient(1)** recall configuration options, except for recursive. This includes timeout; by default it will wait indefinitely for the recall to complete.

See **ngenea-client.conf(5)** for more information on the configuration format and additional options.

## TRANSPARENT RECALL POLICY

Transparent recall, by definition, is intended to be triggered automatically when an offline file is opened for reading or writing.

To enable transparent recall functionality using **transparent\_recall**, the following rules can be added to the filesystem placement policy.

```
/* END: NGENEA TRANSPARENT RECALL POLICY */
```

If transparent recall (EVENT) rules are already installed for ngenea (native), these rules should replace those equivalent rules.

Don't replace any rules besides the ngenea EVENT rules, e.g. don't replace any SET POOL rules.

See **mmchpolicy(1)** for how to change the filesystem placement policy

#### WARNING

Due to limitations of GPFS, the above policy will not work on any paths which contain whitespace. Transparent recall will simply error.

An alternative policy substitutes the system lw line for

```
ACTION(system('/usr/bin/python3 /usr/bin/transparent_recall ''' ||
getDetail('path_name') || '''')=0)
```

This will handle paths containing whitespace, but not those containing single quotes. Again, transparent recall will error.

There is currently no approach which works in all cases. You must chose the version which is most compatible with the sorts of paths you have on your system.

#### **TROUBLESHOOTING**

When attempting to read an offline file, if the read process reports "Operation not permitted", and it's not due to permissions, the most likely cause is that the recall failed.

Logs for the **transparent\_recall** command invocation can be found at /var/adm/ ras/mmfs.log.latest

Logs for the transparent recall job can be viewed via Ngenea Hub.

**WARNING** - if reading a file triggers a recall, the read request will block until recall exits; it can't be interrupted (Ctrl+C) or killed (kill -9). If the recall job is 'stuck' and no timeout is set, the only way to make the read process exit is to kill the recall job via Ngenea Hub.

#### **AVAILABILITY**

Distributed as part of the ngenea-hub-client rpm, or the ngclient wheel (Python) for non-Red Hat based systems.

Note - **transparent\_recall** makes use of flock(2), so can only be used on Unix-base operating systems.

### **SEE ALSO**

## Ngenea Hub Changelog

```
Release notes - Ngenea Hub - 2.2.1: 2024-04-29
______
Bug
- - -
HUB2-1630 - Transparent recall functionality now correctly submits
with new engine
Release notes - Ngenea Hub - 2.2.0: 2024-03-28
______
Feature
_ _ _ _ _ _ _
UI Colours
Search Tags
Custom Attributes for SMB
New DAG Job Engine
Improvement
HUB2-291 - Better wrap long space names
HUB2-365 - Different colors for task table chips instead of "gray"
ones
HUB2-368 - Fix scrolling arrows showing up by default on rightbar
HUB2-652 - Utility for translating schedule object to user
HUB2-770 - Automatically name policy condition group titles
HUB2-863 - Task stats should apply the filter on job details page
HUB2-895 - Provide API support for editing search tags
HUB2-990 - Provide the ability to filter site alerts by severity
HUB2-1032 - Search: Support extensions starting with dot for
core.extension filter
HUB2-1035 - Enforce unique space mount point (API)
HUB2-1072 - Ensure group titles wrap better
HUB2-1084 - Swap files above tasks in job details
HUB2-1089 - Provide the ability to set the number of executed policy
threads in the UI
HUB2-1103 - Add buttons for pausing and resuming a job
HUB2-1104 - API response for job Owner is different
HUB2-1105 - Adjust Job details UI labels to new DAG statistics
HUB2-1107 - Adjust websocket responses to conform with new
```

```
serializers
HUB2-1112 - Ensure NAS components are not visible if all sites in AD
HUB2-1162 - Site filtering for policies
HUB2-1213 - Ensure apbackup chip colours are consistent and correct
site colour when input is changed
HUB2-1218 - Make top bar green
HUB2-1219 - Implement yellow progress bar across wizards
HUB2-1220 - Provide the ability to set the colour of the Site Chip
in the Create Site wizard
HUB2-1222 - Updated colourful left bar menu buttons
HUB2-1223 - Updated login page presentation
HUB2-1224 - Cyclic colours for space cards
HUB2-1225 - Provide the ability to set the colour of the Space Card
in the Space Wizard
HUB2-1226 - General CSS changes for button/checkbox/slider etc.
elements
HUB2-1227 - Add SMB Custom Options Panel to Create Space Wizard
HUB2-1228 - Add SMB Customs Options Panel to Update Space Modal
HUB2-1230 - Modify multiselect dropdown component for search of a tag
HUB2-1237 - Remove feature flags for stable features
HUB2-1256 - Provide API support for Site chip colours
HUB2-1259 - Increase intervals for site refreshes
HUB2-1261 - Provide alphabetical ordering for managed keys
HUB2-1263 - Add tag selector filter to Search filters (in main
search filter list)
HUB2-1264 - Add tag editor to search side panel for asset
HUB2-1282 - Grant metadata update permission to worker service user
HUB2-1291 - Switch site chips to double colour chips
HUB2-1294 - Don't display muted alerts in the GUI
HUB2-1310 - Update Hub favicon
HUB2-1311 - Add danger notification
HUB2-1312 - Make rightbar stay at the same place on scroll for
global search page
HUB2-1316 - Hide resubmit button for settings tasks
HUB2-1328 - Better render "Date started" for cancelled tasks
HUB2-1334 - Ensure backup UI components are only displayed if the
site has nodes configured with the apbackup role
HUB2-1346 - Implement database expiry page in global settings page
HUB2-1358 - Make sticked sidebar on default for all elements
HUB2-1376 - Re-expose grafana dashboard
HUB2-1377 - Provide role lookup for apbackup feature
HUB2-1378 - Add filter by job creator inside jobs
HUB2-1389 - RPM of public facing html docs
HUB2-1399 - Change text inside of tags multi-select
HUB2-1401 - Remove Default Location toggle from space create wizard
HUB2-1402 - Where a site only has one pool, auto-select it in the
space creation drop-down
HUB2-1411 - Document swagger URL
HUB2-1417 - Add a base class to all non system worker tasks that
check if it can run
HUB2-1418 - Adjust the cancel process to use redis and change the
cancelling states
HUB2-1436 - Add the enable plugin setting to the plugin docs
```

- HUB2-1438 Type filter updates on Jobs page for DAG jobs
- HUB2-1442 Job details show job status as Pausing when the job is in state Pausing
- HUB2-1446 Remove settings task types from workflow filter list in the UI
- $\mbox{HUB2-1447}$  Support for filtering on CANCELLING and PAUSING states in the UI
- HUB2-1450 Document the /hubmetrics endpoint
- HUB2-1469 Task stats should include PENDING task counts
- HUB2-1496 Provide clarification that File Stats processes more than Files
- HUB2-1498 Rename the "In-Progress" file stats label to "Pending"
- HUB2-1530 Rename Job Type to Workflow in job creator

## Bug

- - -

- HUB2-395 Prevent setting space mount point to existing path
- HUB2-473 Deleting any of the site config fields and submitting does not delete the fields
- HUB2-581 Resolve an issue whereby a resubmitted job displays Job Creator unknown
- HUB2-703 Client key name max length error
- HUB2-807 Invalid date message on filebrowser table
- HUB2-812 Resolve an issue whereby full screen for task logs does not display in full screen
- HUB2-892 Resolve an issue whereby a space cannot be deleted using the python shell without deleting snapshot schedule first
- HUB2-928 Fix timeout message in search page
- HUB2-946 Small Browser Window Stylesheet Issue
- HUB2-997 Task type filter options are not loaded for some of the system jobs
- HUB2-1006 Ensure that site creation summaries are accurate
- HUB2-1061 Provide job not found page
- HUB2-1079 Resolve an issue whereby full screen video preview does not fullscreen
- HUB2-1083 Resolve an issue whereby joined sites have no job site labels
- HUB2-1086 Resolve an issue whereby key names can be obscured
- HUB2-1136 Very long file name takes all the width in file browser table
- HUB2-1144 Resolve an issue whereby a invalid nginx config can cause frontend service interruption
- HUB2-1146 Error handling error response from search
- HUB2-1184 Cursor jumps to end of line as you type in the space name textbox
- HUB2-1185 Job gets stuck in processing if permissions on ngmigrate do not allow execution
- HUB2-1189 Remove unneeded warnings in the worker logs
- HUB2-1232 Cannot add API key via UI if profile fields aren't set
- HUB2-1242 Resolve an issue whereby all NAS interfaces cannot be removed
- HUB2-1245 Resolve an issue whereby the Username is truncated in the top right
- HUB2-1260 Resolve an issue whereby the Sites page shifts off

```
screen when the left bar is expanded
HUB2-1262 - Resolve an issue whereby flickering is observed when
loading pages
HUB2-1279 - 500 Server error when trying to verify an auth token
HUB2-1284 - Resolve an issue whereby SAMBA configuration entries are
duplicated on update or deletion
HUB2-1285 - Unable to save NAS settings
HUB2-1289 - Fix duplicate job detection preventing Samba keys from
being updated more than once
HUB2-1290 - Resolve an issue whereby a basic auth login prompt is
presented
HUB2-1293 - Pre-set public url is not populated on create site wizard
HUB2-1301 - Setting a schedule to 1 hour causes it to run every
minute
HUB2-1307 - Unable to create NAS users after deleting NAS user
HUB2-1314 - Create and update Space wizard error if no ngenea
targets have been defined
HUB2-1319 - Fix validation email for create user wizard & update
user modal
HUB2-1322 - Migration policy with three pools skips the second pool
HUB2-1323 - Cannot create a policy with a schedule
HUB2-1324 - Site settings - existing extra domain can not be deleted
& validation needed for extra domain without name
HUB2-1326 - public url = None crashes UI for unconfigured site
HUB2-1339 - Fix "get() returned more than one Server" issue
HUB2-1359 - Fix height of the multi-select dropdowns to have valid
minimum height
HUB2-1360 - Selecting a tag for an item, assign it for all items
with exact path, which is not unique
HUB2-1362 - Job status appears as Ongoing for job in state
UNKNOWN FAILURE
HUB2-1366 - Resolve an issue whereby ngenea target secrets are
visible in log files
HUB2-1367 - Spaces can suddenly become unlinked where multiple
"sites" are defined for a given PixStor cluster
HUB2-1379 - Filter input inside jobs is not working
HUB2-1380 - transparent recall does not honour api secure verify
HUB2-1384 - Cannot change snapshot schedule on a space
HUB2-1394 - SettingsTask deduplication logic prevents legitimate
iobs from running
HUB2-1400 - Redis will consume all available ram on a system over
time
HUB2-1403 - Fix settings refresh
HUB2-1404 - Timestamp rules for policy weighting are incorrect
HUB2-1412 - Space settings loads a blank screen if site label is not
set
HUB2-1413 - Job submitter does not show anything if site label is
missing
HUB2-1415 - Make sure the UI does not break when workflows are
visible=False
HUB2-1416 - Link to space path lost on login
HUB2-1420 - Job submitter does not allow running workflow
HUB2-1423 - DAGs submit custom tasks to the wrong queue
HUB2-1425 - Tasks filter not applying to live updates
```

HUB2-1426 - Unable to disable site apbackup

HUB2-1434 - Tasks go into state "STARTED" even though they are still

"PENDING"

HUB2-1441 - Ngenea worker service cannot start up when no filesystem exists

HUB2-1448 - Possible to cancel PAUSING jobs via the jobs overview

HUB2-1455 - Job details rightbar shows ongoing when the job is in cancelling state

HUB2-1467 - Job stats are not updated correctly when a DAG job is cancelled

HUB2-1477 - Docker images manifest file is missing from rpms

HUB2-1494 - UI is redirected to /undefined

HUB2-1495 - Only in progress File stats are updating

HUB2-1497 - Clicking the files stats number retrieves no content into the pop up JSON modal

HUB2-1499 - job task list IDs are not being sorted correctly

HUB2-1500 - API request should call refresh token once expired,

rather than logging the user out

HUB2-1509 - Long job descriptions break the UI on job table

HUB2-1517 - Cancelling a recursive job can cause tasks to be stuck in PAUSED

HUB2-1518 - Cancelling a job while "recursive\_navigate" task is in started, causes objects to be stuck "In-progress"

HUB2-1521 - Error in return status of ngmigrate task

HUB2-1549 - Completed time not set for cancelled job with failed tasks

HUB2-1559 - UI does not allow having empty emails on user update modal

Release notes - Ngenea Hub - 2.1.1: 2024-02-08

## Bug

- - -

HUB2-1367 - Spaces can become unlinked where multiple "sites" are defined on the same PixStor cluster

Release notes - Ngenea Hub - 2.1.0: 2023-12-22

## Feature

- - - - - - -

Ability to configure Ngenea Backup Ability to manage NAS users and groups Ability to view disk metrics New storage info page

New Alerts UI

Release notes - Ngenea Hub - 2.0.2: 2023-11-17

#### Feature

-----

New Search page, integrating PixStor Search into Hub New Policies page, to configure and run data migration policies from the Hub UI

HUB2-27 - Prevent access to UI components according to user permissions

HUB2-660 - Display all GPFS filesystems in Site Dashboard

HUB2-691 - Ability to give space shares custom names

HUB2-692 - Ability to create multiple shares per space at different paths

HUB2-754 - API to fetch settings tasks list for a job

HUB2-791 - Global view of Jobs in the UI

HUB2-792 - Support for submitting custom workflows in the UI

HUB2-823 - Support for setting analytics and metrics URL from UI

HUB2-828 - Ability to specify target path for Space creation

HUB2-831 - Filesystems API endpoint

HUB2-1003 - System folders are hidden in the UI

HUB2-1014 - Ability to bookmark and link locations in the file browser

HUB2-1043 - Ability to view job file lists in job details page rightbar

HUB2-1071 - Added DNS search domains to Site settings

HUB2-1075 - Support for editing job Schedules in the UI

## **Improvement**

-----

HUB2-370 - Improved progress bars proportion in job details page

HUB2-527 - Sensitive settings such as ngenea secret keys are hidden from the UI and API

HUB2-785 - Include share path in file list for share jobs

HUB2-795 - Jobs page view persists when refreshing the page

HUB2-825 - All members of the group can be viewed via the "view all members" button

HUB2-833 - Improved UI for settings Job details

HUB2-834 - Adds user-friendly job descriptions

HUB2-835 - Snapshot time can only be set when the frequency is greater than 1 day

HUB2-861 - Ability to search for a job by ID on jobs page

HUB2-905 - Updated storage target type naming in ngenea wizard

HUB2-915 - "view task" modal is now full width in the jobs page

HUB2-927 - Users list is sorted alphabetically in the groups tab

HUB2-951 - Server address is now optional when creating S3 ngenea targets

HUB2-1025 - Tooltip for long values in the details sidebar

HUB2-1030 - Validation notice for Samba shares in the Space wizard

HUB2-1070 - Don't allow setting server names longer than NETBIOS allowed limit

HUB2-1124 - Updated labels and icons for default workflows

## Bug

- - -

HUB2-595 - Create space parent directory if it doesn't already exist

```
HUB2-783 - Set owner for automated settings tasks to 'system'
HUB2-796 - Exclude certain interface types from site NAS settings
HUB2-805 - Filters not working on Users or Groups pages
HUB2-816 - Workflow file list selected whole space instead of
individual files
HUB2-832 - Validation for space placement pools
HUB2-854 - Folder metadata not loading in the file browser
HUB2-856 - Fix settings page link for when a custom base URL is
configured
HUB2-931 - None values being written to samba shares
HUB2-932 - Multiple delete jobs being triggered for the same share
HUB2-933 - Don't force changing site shortcode on create site wizard
HUB2-935 - Broken spaces page when only one site is configured
HUB2-949 - Go back button for "advanced configuration" breaks UI on
ngenea target wizard summary
HUB2-953 - Add api secure verify support to ngclient
HUB2-1028 - Site settings weren't updated in the UI after applying a
change
Release notes - Ngenea Hub - 2.0.1: 2023-09-19
_____
Bug
HUB2-931: Don't write None values to samba shares
Documentation
HUB2-673: Updated user docs for Ngenea Hub 2.0
Release notes - Ngenea Hub - 2.0.0: 2023-08-11
Feature
-----
Initial Release:
- Hub 2.0 UI
- Provide the ability to view pixstor sites and storage
- Provide the ability to configure pixstor sites from the Hub UI
- Provide the ability to create Spaces
- Provide the ability to view files globally across all Space
associated sites
- Provide the ability to perform data workflows
- Provide the ability to monitor jobs and tasks
- Provide the ability to manage Hub users and groups
- Support for Active Directory/LDAP logon
- Worker support of Hub 2.0 functions
  - Analytics data
```

- Get and Set pixstor settings for a site

- Autojoin to Hub

## License

Ngenea Hub is licensed under the ArcaPix EULA: https://www.arcapix.com/licenses/ EULA.txt

ArcaPix EULA January 2021 http://www.arcapix.com/licenses/EULA.txt Copyright 2021 ArcaPix Limited

This end user licence agreement (EULA) is a legal agreement between you (the entity or individual who is using the software) and us (as applicable either Pixit Media Limited, company number 07298805 or ArcaStream Ltd, company number 08346283) in respect of (as applicable):

- \* the computer software described in the order form, proof of entitlement (POE), invoice or other document linking to this EULA (in each case as issued by or agreed in writing with us), or which otherwise incorporates or is governed by this EULA and the data supplied with that software (collectively, Software);
- \* the application programming interface described in the order form, proof of entitlement (POE), invoice or other document linking to this EULA (in each case as issued by or agreed in writing with us), or which otherwise incorporates or is governed by this EULA and the data supplied with that application programming interface, in each case whether provided on a standalone basis or alongside the Software (collectively, API) and
- \* printed materials and electronic documents associated with that Software or API (Documents).

The Software, API and Documents are collectively the "Work" and such term includes each of the Software, API and Documents as applicable.

We license use of the Work to you on the basis of this EULA. We do not sell the Work to you. We remain the owners of the Work at all times. By using the Work, or otherwise by clicking "accept" or otherwise indicating acceptance of this EULA, you confirm you accept the terms of this EULA. If you do not accept this EULA you may not use the Work.

Any services we provide, including but not limited to maintenance, support, development and hosting, will be under separate terms of business, but any software we provide to you incidentally in the course of those services, will also be governed by this EULA unless expressly stated that other licence terms will apply.

You should print a copy of this EULA for future reference.

1 Grant and scope of licence

- 1.1 In consideration of payment by you of the agreed licence fee and you agreeing to abide by the terms of this EULA, we grant to you a non-exclusive, non-transferable licence to use the Work on the terms of this EULA for the duration of your subscription. Your subscription will only be valid during the period for which you have a valid POE from us to use the Software and when your subscription expires this EULA will automatically terminate without the need for notice. Any termination of this EULA will also terminate your subscription and your POE will be invalidated.
- 1.2 You may download, install and use the Software for your own internal business purposes only on the systems, either physical or virtual detailed in the accompanying POE as identified in your purchase order (if applicable) or otherwise approved by us or our authorised representatives.
- 1.3 You may not use the Work for the purposes of making its functionality available to third parties as a service, whether directly or indirectly, without our express written agreement.
- 1.4 You may access and use the API solely for the purposes of
- 1.4.1 internally developing applications which communicate and interoperate with software or systems detailed in (and for the purposes detailed in) the accompanying POE as identified in your purchase order (if applicable) or otherwise approved by us or our authorised representatives; and
- 1.4.2 making calls to the systems or software permitted under clause 1.4.1, subject to any limits detailed in the accompanying POE as identified in your purchase order (if applicable) or otherwise agreed with us or our authorised representatives.
- 1.5 Your display and use information received through the API or data derived from that information is in each case subject to any limits detailed in the accompanying POE as identified in your purchase order (if applicable) or otherwise agreed with us or our authorised representatives).
- 1.6 You may use any Documents in support of the use permitted under condition 1.2 and make copies of the Documents as are reasonably necessary for their lawful use.
- 1.7 This EULA does not grant you permission to use the trade names, trademarks, service marks, or product names of us or our contributors or licensors, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of any "licence" files.

## 2 Restrictions

2.1 Except as expressly set out in this EULA or as permitted by any local law, you undertake:

- 2.1.1 not to copy the Work except where such copying is incidental to normal use of the Software, or where it is strictly necessary for the purpose of back-up or operational security;
- 2.1.2 not to rent, lease, sub-license, loan, translate, merge, adapt, vary or modify the Work;
- 2.1.3 not to make alterations to, or modifications of, the whole or any part of the Work, nor permit the Work or any part of them to be combined with, or become incorporated in, any other programs or other documentation as applicable, other than as expressly permitted in writing by us;
- 2.1.4 not to disassemble, decompile, reverse-engineer or create derivative works based on the whole or any part of the Software or API (except as expressly permitted by us in writing or clearly provided for within the functionality of the Software or any accompanying API we provide) nor attempt to do any such thing except to the extent that (by virtue of section 296A of the Copyright, Designs and Patents Act 1988) such actions cannot be prohibited because they are essential for the purpose of achieving inter-operability of the Software or API with another software program, and provided that the information obtained by you during such activities:
- 2.1.4.1 is used only for the purpose of achieving inter-operability of the Software or API with another software program; and
- 2.1.4.2 is not unnecessarily disclosed or communicated without our prior written consent to any third party; and
- 2.1.4.3 is not used to create any software which is substantially similar to the Software or API;
- 2.1.5 to keep all copies of the Work secure and to maintain accurate and up-to-date records of the number and locations of all copies of the Work;
- 2.1.6 to supervise and control use of the Work and ensure that the Work are only used by your employees (or such other individuals or entities are you may be expressly permitted in writing by us to allow to access or use the Work) in accordance with the terms of this EULA:
- 2.1.7 to include our copyright notice on and any "licence" text files in all entire and partial copies you make of the Work on any medium, however you may not use any component parts of the Work outside of or separately from the Work;
- 2.1.8 not to provide or otherwise make available the Work in whole or in part (including but not limited to program listings, object and source program listings, object code and source code), in any form to any person other than your employees without prior written

consent from us; and

- 2.1.9 to comply with all applicable technology control or export laws and regulations.
- 2.2 Without prejudice to the restrictions in this EULA on copying, modifying or creating derivative works from the Work, where you (or someone on your behalf) creates (solely or in conjunction with others, and whether in object or source code form) any software or other work which is based on or derived from the Work (Derivative Work) in breach of this EULA or otherwise, then in consideration of the sum of 1 GBP (receipt and sufficiency of which you acknowledge), you hereby:
- 2.2.1 assign to us (by way of present assignment of future rights) all intellectual property rights in such Derivative Work and waive (and shall procure a waiver of) all moral rights arising under the Copyright, Designs and Patents Act 1988 in relation to the Derivative Work and, so far as is legally possible, any broadly equivalent rights that may exist in any territory of the world; and
- 2.2.2 In the event that any rights in such Derivative Work are not assigned to us pursuant to clause 2.2.1, you hereby grant to us an exclusive, royalty-free, worldwide, transferrable, irrevocable, perpetual licence (together with the right to grant sub-licences) to use in any manner as we determine, any such Derivative Work.
- 2.3 For the avoidance of doubt, for the purposes of clause 2.2, Derivative Work shall not include works which merely link or bind by name an existing third party application to the interfaces of the Software or API but does include works which are created to integrate with, or to be processed using, the interface of the Software or any API which we provide.
- 2.4 You agree not to (by your act or omission) do, or permit to be done, any act that will or may weaken, damage or be detrimental to the Work or any of our intellectual property rights or our or any of our contributors or licensors' rights in such, or seek to register any rights in the Work or any part of it or seek to commence litigation against any third party in respect of any intellectual property infringement in relation to the Work or any part of it.
- 3 Intellectual property rights
- 3.1 You acknowledge that all intellectual property rights in the Work anywhere in the world belong to us or our licensors or contributors, that rights in the Work are licensed (not sold) to you, and that you have no rights in, or to, the Work other than the right to use them in accordance with the terms of this EULA.
- 3.2 You acknowledge (unless explicitly agreed in writing by us) that you have no right to have access to the Software in source code form.
- 4 Liability

- 4.1 You acknowledge that the Work has not been developed to meet your individual requirements, including any particular cybersecurity requirements you might be subject to under law or otherwise, and that it is therefore your responsibility to ensure that the facilities and functions of the Software and API as described in the Documents meet your requirements.
- 4.2 We only supply the Work for internal use by your business, and you agree not to use the Work for any other purposes unless expressly permitted in writing by us.
- 4.3 We shall not in any circumstances whatever be liable to you, whether in contract, tort (including negligence), breach of statutory duty, or otherwise, arising under or in connection with this EULA for:
- 4.3.1 loss of profits, sales, business, or revenue;
- 4.3.2 business interruption;
- 4.3.3 loss of anticipated savings;
- 4.3.4 loss or corruption of data or information or any loss arising from misconfiguration or incorrect implementation or use of any API;
- 4.3.5 loss of business opportunity, goodwill or reputation;
- where any of the losses set out in condition 4.3.1 to condition 4.3.5 are direct or indirect; or
- 4.3.6 any special, indirect or consequential loss, damage, charges or expenses.
- 4.4 Other than the losses set out in condition 4.3 (for which we are not liable), our maximum aggregate liability under or in connection with this EULA whether in contract, tort (including negligence) or otherwise, shall in all circumstances not exceed a sum equal to the Licence Fee paid in the 12 months prior to the event first giving rise to any liability. This maximum cap does not apply to condition 4.5.
- 4.5 Nothing in this EULA shall limit or exclude our liability for:
- 4.5.1 death or personal injury resulting from our negligence;
- 4.5.2 fraud or fraudulent misrepresentation;
- 4.5.3 any other liability that cannot be excluded or limited by English law.
- 4.6 Save as required by applicable law or agreed to in writing, we provide the Work on an "AS IS" basis, without conditions, warranties, representations or other terms of any kind, either

express or implied (and any such implied conditions, warranties, representations or other terms, whether implied by statute, common law or otherwise, are excluded to the fullest extent permitted by law), including, without limitation, any conditions, warranties, representations or other terms relating to title, non-infringement, merchantability, or fitness for a particular purpose. You are solely responsible for determining the appropriateness of using the Work and for any configuration or interface necessary for you to effectively use the Work and assume any risks associated with your exercise of permissions under this EULA.

4.7 Without prejudice to clause 4.6, where the API interacts with any software or system which is not provided by us, we are not responsible and shall have no liability in any way for such software or system.

#### 5 Termination

- 5.1 We may terminate this EULA immediately by written notice to you if you commit a breach of this EULA which you fail to remedy (if remediable) within 14 days after the service of written notice requiring you to do so. Without prejudice to our rights under this clause 5.1, your rights under this EULA will terminate automatically without the need for notice if you commit a material breach of any of the terms of this EULA.
- 5.2 On termination for any reason:
- 5.2.1 all rights granted to you under this EULA shall cease;
- 5.2.2 you must immediately cease all activities authorised by this EULA; and
- 5.2.3 you must immediately and permanently delete or remove the Work from all computer equipment in your possession, and immediately destroy or return to us (at our option) all copies of the Work then in your possession, custody or control and, in the case of destruction, certify to us that you have done so.
- 6 Communications between us
- 6.1 We may update the terms of this EULA at any time on notice to you in accordance with this condition 6. Your continued use of the Work following the deemed receipt and service of the notice under condition 6.3 shall constitute your acceptance to the terms of this EULA, as varied. If you do not wish to accept the terms of the EULA (as varied) you must immediately stop using and accessing the Work on the deemed receipt and service of the notice.
- 6.2 If we have to contact you, we will do so by email or by pre-paid post to the address you provided in accordance with your order for or registration of the Work.
- 6.3 Note that any notice:

- 6.3.1 given by us to you will be deemed received and properly served 24 hours after it is first posted on our website, 24 hours after an email is sent, or three days after the date of posting of any letter; and
- 6.3.2 given by you to us will be deemed received and properly served 24 hours after an email is sent, or three days after the date of posting of any letter.
- 6.4 In proving the service of any notice, it will be sufficient to prove, in the case of posting on our website, that the website was generally accessible to the public for a period of 24 hours after the first posting of the notice; in the case of a letter, that such letter was properly addressed, stamped and placed in the post to the address of the recipient given for these purposes; and, in the case of an email, that such email was sent to the email address of the recipient given for these purposes.

#### 7 Events outside our control

- 7.1 We will not be liable or responsible for any failure to perform, or delay in performance of, any of our obligations under this EULA that is caused by an Event Outside Our Control. An Event Outside Our Control is defined below in condition 7.2.
- 7.2 An Event Outside Our Control means any act or event beyond our reasonable control, including without limitation failure of public or private telecommunications networks.
- 7.3 If an Event Outside Our Control takes place that affects the performance of our obligations under this EULA:
- 7.3.1 our obligations under this EULA will be suspended and the time for performance of our obligations will be extended for the duration of the Event Outside Our Control; and
- 7.3.2 we will use our reasonable endeavours to find a solution by which our obligations under this EULA may be performed despite the Event Outside Our Control.

## 8 Third Party Software

8.1 Any part or component of the Software which has been contributed or created by any third party (including any open-source software) and which is not owned by us (Third Party Software) shall be deemed to be incorporated within the Software for the purposes of this EULA (except where expressly provided to the contrary) and use of the Third Party Software shall be subject to (and you shall comply with) such additional terms as relate to such Third Party Software from time to time (Third Party Additional Terms), and such Third Party Additional terms shall take precedence over this EULA in relation to such Third Party Software. You shall indemnify and hold us harmless against any loss or damage which we may suffer or incur as a result

of your breach of any Third Party Additional Terms howsoever arising, and we may treat your breach of any Third Party Additional Terms as a material breach of this EULA.

- 8.2 For the avoidance of doubt, the performance of, and any issues caused by or arising from, any Third Party Software shall be considered an Event Outside Our Control and (without prejudice to the provisions of this EULA in relation to warranties regarding the Software generally) all Third Party Software is provided on an "AS IS" basis and without conditions, warranties, representations or other terms of any kind, either express or implied (and any such implied conditions, warranties, representations or other terms, whether implied by statute, common law or otherwise, are excluded to the fullest extent permitted by law), including, without limitation, any conditions, warranties, representations or other terms relating to title, non-infringement, merchantability, or fitness for a particular purpose.
- 9 Other important terms
- 9.1 We may transfer our rights and obligations under this EULA to another organisation, but this will not affect your rights or our obligations under this EULA.
- 9.2 You may only transfer your rights or your obligations under this EULA to another person if we agree in writing.
- 9.3 This EULA and any document expressly referred to in it constitutes the entire agreement between us and supersedes and extinguishes all previous agreements, promises, assurances, warranties, representations and understandings between us, whether written or oral, relating to its subject matter. You agree that you shall have no remedies in respect of any statement, representation, assurance or warranty (whether made innocently or negligently) that is not set out in this EULA or any document expressly referred to in it. You agree that you shall have no claim for innocent or negligent misrepresentation or negligent misstatement based on any statement in this EULA or any document expressly referred to in it.
- 9.4 If we fail to insist that you perform any of your obligations under this EULA, or if we do not enforce our rights against you, or if we delay in doing so, that will not mean that we have waived our rights against you and will not mean that you do not have to comply with those obligations. If we do waive a default by you, we will only do so in writing signed by us, and that will not mean that we will automatically waive any later default by you.
- 9.5 Each of the conditions of this EULA operates separately. If any court or competent authority decides that any of them are unlawful or unenforceable, the remaining conditions will remain in full force and effect.
- 9.6 This EULA, its subject matter and its formation (and any non-contractual disputes or claims) are governed by English law. We both

irrevocably agree to the exclusive jurisdiction of the courts of England and Wales.
